I haven't run JNOS in several years, but you might try the
following--as sysop, issue the command 'smtp list' and you should see
the list of messages. 'smtp kick' should try to run the queue. At
that point 'tcp status' should give a hint of what is/isn't happening.

1. Toss "JNOS" into the bit-bucket.

Get an old 386 or 486, install DOS and FBB BBS. This combination will be
more reliable and trouble-free than the LINUX/JNOS combo. It requires less
than 20% of the setup time that your present system does, have a better
human interface, and in a general sense it will just plain work better. Part
of the reason for this is that the author of FBB BBS is a much, much better
programmer than the author of JNOS, not to mention all the anonymous junior
programmer wanna-bees that have peed on JNOS, over the years. That code is a
real mess, now. - The inevitable result of "open sewers" programming
technique.

You will find that operating genuine packet BBS software running over DOS to
be a real pleasure, after struggling with Linux/JNOS. It must be remembered
that JNOS' "BBS" functions are the result of a poorly-done hack of
legitimate BBS software, by a "programmer" who obviously did not have the
concept of packet BBS operation very clear in his mind. Even when it works,

nobody likes it because the interface sucks so hard. All that "area" crap, etc... It's just a waste of time.

After years of bad-mouthing packet BBS's, the truth finally came out when amateur tcpip enthusiasts discovered that hardly ANYBODY wanted to operate NOS. The ham tcpip community responded to this fact by inexpertly hacking basic BBS functions onto various flavors of "NOS", in a desperate bid to get some significant number of hams to tolerate the weird NOS software. This effort failed to make NOS popular, but at least it did lay to rest all those years of bad-mouthing BBS stations. It made it plain that amateur tcpip enthusiasts know that packet BBS systems are the best way to go. They had to pretend to be packet BBS's, in order to get anyone to use thier software at all.

If you install DOS, FBB, and FlexNet, your station will preform better on the air than any packet system available for Linux. The Linux stuff depends upon the obsolete KISS protocol, nice stuff in the 1980's but definately third-rate in this day and age. If you want the latest packet technology from the 1980's, stick with JNOS/Linux. If on-the-air performance is important to you, then you want FlexNet.

Of course it may be that you are running Linux/JNOS because you hope to run a packet/internet gateway... In that case, the DOS/FBB/FlexNet setup would not work for you, and the best thing you can do is to send your ham liscense back to the FCC, sell your ham equipment and buy yourself some FRS and CB gear.

Hope this helps!

Not really. The guy wanted to know how to get the JNOS software to behave and I gave an honest answer as to how I would solve the problem. - I would round-file the JNOS software, and go from there.

I used to test and review packet software, and found JNOS to be the very lousiest excuse for packet radio software I had ever seen. Despite that, I did manage to get it working, at least good enough so that I could test its functionality for a fair review, so I am familiar with the unnecessary head-aches and poor on-the-air performance this guy is putting up with.

I gave the guy a little historical info about the software he was using, and pointed the way to more modern software that will do a better job with a lot less trouble. I was working on the assumption that the guy was not a masochist, but just wanted a reliable packet radio BBS that would work without constant massaging and tinkering, or embarassing malfunctions that lose people's messages.

I suppose that you are free to run me down for trying to help the guy out, but notice that I won't say a single word about you being an obvious "protocol warrior", still stuck back in the 1980's.

Thanks for the suggestions, Charles, but FBB is the whole reason I'm looking
at JNOS. I ran it for several years and found it to be very unreliable and
unable to integrate with gateway software. I used FBB to run the local
packet BBS here in Omaha and to forward on VHF, UHF, HF, and the internet.
FBB is great for talking to other FBB systems, but not too good at talking
to anything else.

And yes, I plan to gateway this system through the internet. I'll hold on
to my ham license, though. I need it for my 10-15 hours I spend each week
on HF either on 7.261 or working cw on the low end of 40.

And speaking of obsolete systems, where would I buy a copy of DOS if I
wanted to run FBB? I haven't seen one for almost 10 years.

73,
Jeff
N0WJP

Well, to tell the truth, Jeff, you are the second person I've ever heard
talk about FBB BBS software being "unreliable". The other complainer was a
LandLine Lid, too, so I'll assume it's the non-ham stuff that you are having
trouble with.

You can imagine how broke up I must be, over you experiencing difficulties
while trying to screw up.

> And yes, I plan to gateway this system through the internet. I'll hold on
> to my ham license, though. I need it for my 10-15 hours I spend each week

> on HF either on 7.261 or working cw on the low end of 40.

Don't count on your messages being delivered to or by the genuine amateur radio stations in the BBS forwarding net. Gateway stations have caused so much damage to the fowarding network that many BBS forwarders are now refusing to handle traffic either coming from or going into any LandLine Lid system. Several of the more destructive LansdLine Lid stations have been isolated this way, to reduce the amount of damage that they can do.

There are now large sections of the country where non-ham stuff is not allowed to participate in the Ham Radio network at all. Your messages will not be delivered there. LandLine Lid stations there can chat with each other on the Internet, as usual, but are not allowed to disrupt the activities of genuine amateur radio packet network. You will probably be "forwarding" (internet chatting) with some of these lonely, out of place LandLine Lid stations, keeping a miserable trickle of messages going for them.

Remember that the packet radio HF forwarding network is an association of amateur radio operators who work to implement HF digital links. Your non-ham links are not welcome amongst these hams who are trying to use radio, and your operation within that group with your non-ham links will- to the extent that it is tolerated - cause disruption within the network, making it harder for hams to use radio as intended for this purpose.

- But you already know all that, Jeff, and don't care. That's the kind of "ham" that you are, aren't you?

You know, this kind of destructive, disruptive LandLine Lid "protocol war" behavior was bad enough back in the 1980's... Back then, it decimated the existing HF forwarding network and disrupted packet communications across the USA, and it was all chalked up to "protocol wars", as if that was any justification for deliberately disrupting amateur radio communications. These days, with the ARRL affiliated with Homeland Security, your disruptive, anti-ham activities may have a little bit more serious consequences that they might have had ten years ago.

I sincerely hope that it does. You are an insect, Jeff, that really deserves to be squashed. I consider anybody who deliberately denigrates and undercuts the ham digital network as you intend to do, during this time of war against terrorism to be beneath contempt. What used to be despicable enough as "protocol warrior" behavior back in the 1980's can now end up costing people's lives and property, disrupting our ability to as hams to provide emergency communications in the event of a terrorist attack or disaster.

There is literally no excuse for the disruptive, destructive activity you propose.

I didn't say it was newer, I said it was more reliable and did not require
so much tinkering. You can get copiies of DOS all over the place. Try an
interenet search, or get somebody to show you how to do one.

Yeah, I'm in real trouble now.

Charles, why don't you join us in the 21st century? It's attitudes like yours that have made ham radio just a "curiosity" rather than a community of dedicated experimenters who develop new communications technology before the commercial interests can do it. If I'm an insect, then you're an antique.

As for HF forwarding I guess we'll wait and see. I'll attempt to get back into HF forwarding once my VHF, UHF and microwave links are back up.

73,
Jeff

Ah yes! The dedicated Land Line Lid!
Spouting the same drivel and lies they all do.

"Why not advance ham radio by using the internet instead of radio!"
Sir, you are an idiot.

Jeff,

I'm not familar with JNOS but this sounds like a routing problem.

Does each local user have their own mail queue? Under linux, each user has a file under /var/spool/mail. Mail coming into the box is transferred into a file under /var/spool/mail by the sendmail program. Sendmail looks up each destination address in an 'aliases' file (/etc/aliases or /etc/mail/aliases), if it isn't found there it is written into a file in the /var/spool/mail directory. The file is given the name of the destination address (i.e. the local user). If it is found in the aliases file, the real name stored in the aliases file is substituted for the destination address and then the message is written into the correct file under the /var/spool/mail directory.

It sounds like you either have no program like sendmail looking at the incoming mail queue in order to deliver it locally or your local users are not defined to the linux system.

Does JNOS have a mail transport agent process that perhaps isn't getting started? Are all local users defined properly?

I hope this gives you a place to start.

Tim ab0wr

Hey Bub, you're the one pushing the latest packet radio technology from the
1980's... Your "protocol warrior" attitude is 1980's vintage as well. You're
the antique, OM... Your bogus attitude is as obsolete as the bogus software
you are struggling with.

Insect.

I run around with some Drag racing guys (Top Fuel, Funny Cars, Gassers, etc),
and just like Hams, they are super-critical about what a "true hot rodder" should
have on his car. I know for a fact that these guys blow shit up even if it was
gold
plated, but yet they keep buying the same shit because everyone else will label
them a traitor or a poster-boy for some manufacturer. There's some people who
can't operate without negative peer pressure. They wrap their positive messages
in
negative slants about one thing or another.

You can't change them, and they are too stupid to change themselves.

Yes, you are right, Gene... In this case, Internet junkies think it's cool to disrupt the amateur radio hobby because ham radio is not "IP", or it's not "fast enough", or - whatever. (Insert anti-ham sentiment or whiney excuse here.) You can't change them, and they are too stupid to change themselves.

Kind of like a guy who insists upon sneaking a little nitro to his tank in a gas competition so that he can "win", LandLine Lids undermine the entire concept of Amateur Radio (Using Radio, Duh!) by using Internet links as part of the packet radio network and so are not really "winners"... They are just disruptive jerk-offs. - You can't change them, and they are too stupid to change themselves.

Insects.

Ham Radio is a much more serious hobby than hotrodding, in that a central part of our reason for being is to provide independent, alternative emergency communications during the course of a disaster or emergency. The activities of amateur radio operators save lives and property. We do this by developing and maintaining day to day ham radio communications so that we will be there in time of need. This has become even more important since the 9/11 attack, as the subsequent affilliation of the ARRL with the Dept. of Homeland Security would indicate to anybody who is not completely brain-dead.

Non-ham communication links have no place whatsoever within an amateur radio

network, as they are the very type of communications that we are supposed to be backing up. - Hopefully a few of us here are intelligent enough to understand the fact that you cannot "back up" a communications system that you are utterly dependent upon. - It would be like having a special telephone number to call, in case the phones go dead. - Useless in your hour of need.

So when insectoid types disrupt the ham radio hobby by imposing unwanted, inappropriate non-ham links within our amateur packet radio network, they are not just being jerkoffs, they are directly endangering human lives and property by interfering with the ability of amateur radio operators to fulfill one of our primary reasons for being - emergency communications.

Tell you what, Gene... I'll send an note to the Dept of Homeland Security and see how they feel about people deliberately interfering with hams trying to provide alternative, independent emergency communications capability. They may have some suggestions for dealing with persons who insist upon undercutting and interfering with amateur radio operators engaged in activities related to our affiliation with Homeland Defense, or may know who to talk to in the FCC about this matter. There's really no reason for hams to have to tolerate this kind of disruptive, irresponsible behavior any more.

Charles --

Put your money where your mouth is. If you're interested in really seeing what the Department of Homeland Security thinks about the issue, please drop them a note about me. I'd be happy to be your "test case" on internet forwarding. My contact info is good in the callbook and QRZ.COM.

I'll make you a deal. If they agree with you that internet forwarding should not be allowed for the purposes you have listed, then I'll gladly disconnect my system from the internet and unconditionally apologize to you here or in any forum you choose. If they decide that internet forwarding poses no threat from their perspective, you can apologize to me here and stop harassing those of us who would like to use the internet for forwarding in addition to RF. Do you have the nerve to back up what you say?

Also, if you're able to work HF, then I hang out on 7261 or thereabouts after 10:00PM central time (usually 7281 before 10) and would love to have you check into the 1721 group. They don't have anything to do with packet or forwarding, but they're a great group of people and everyone's welcome.

73,
Jeff

Hank, I'm glad to see you have the same closed mind and "in the box"
thinking that you did a couple of years ago. My friend, I spend most of my
time in this hobby working different modes on HF, VHF, UHF and microwave and
almost no time on packet.

If you feel better calling me a land line lid, then have at it. Also, take
a look at my earlier reply to Charles. You can feel free to put your money
where your mouth is, too.

73,
Jeff

You'll have to settle for being "generic" unless that kind of detail is actually called for. There are dozens of gateway stations. What I will be doing is demonstrating how the imposition of non-ham links into the amateur radio digital network has undercut and interfered with that network, a result of packet/internet gateways being unregulated in the United States.

I'm in a good position to do that, as I was a participant in the global HF digital network that existed prior to the introduction of non-ham links, and am aware of the mechanism by which those unwanted non-ham links destroyed the network within just a few years. It's fairly easy to demonstrate, and most packet enthusiasts who were around at the time are familiar with how it worked. There was a two-pronged approach, where some HF forwarders were starved for traffic to send, while others were grossly overloaded, way beyond capacity. Prior to the introduction of the non-ham links, the global HF net had operated smoothly and reliably. It was and still is the most significant example of global cooperation among ham radio operators - ever. Unregulated gateways destroyed that.

I was also intimately associated with an advanced, large-scale VHF/UHF packet radio network (TexNet) that started replacing it's existing 9.6kb backbone links with Internet connections, and totally self-destructed within a few years of that move. When the Internet became widely available, all of the large-scale VHF/UHF packet networks naturally took a hit. - But all of them survived and are now growing again except TexNet, which is the only big packet net to completely disappear from the face of the Earth. At one time it had over 100 nodes, covering three states. All gone, now. Non-ham links are the kiss of death.

I can demonstrate packet networks located overseas that operated under regulations that did not allow the imposition of non-ham links. Without exception, those networks continued to advance and grow the entire time the US network, and the global HF net were disrupted and lost coherency. Those folks use 9.6kb - 19.2kb for access these days, with a lot of the backbone being 19.2 fulldup to 72.8 fulldup. All ham radio, with voice over packet and neat stuff like that. This network has a footprint of close to 600-800 miles, maybe better. Nice what you can accomplish, when you stay on-mission and concentrate on doing things with radio. I do not think it will be hard to demonstrate that we should be doing that in the US, too. All we need is a reg that forbids the insertion of non-ham links into a ham radio network, so we can get back on-mission again.

Did you know that prior to the introduction of non-ham links into the US packet network, we provided leadership to the world in this area with the

most widespread, sophisticated packet network on the planet?

I can also demonstrate that the only rapidly growing packet network in the US today (140+ nodes in a few years) specifically does not allow non-ham links. They simply shut offenders out of the system, and stick with radio. They have the fastest growing, most advanced packet network in the US to show for it.

The thing about this is: There is no recorded case of a large-scale VHF/UHF network surviving the wide-spread imposition of non-ham links. The global HF network was killed by non-ham links as soon as the Internet made them available. By way of contrast, there is no record of a packet network that banned non-ham links which has not steadily advanced and grown, the whole time. If you graph it, you can show a direct relationship between the imposition of non-ham links and the decline of a packet radio network's perf ormance and utility. It has the same end effect as malicious interference, and should be regulated as such, for that reason.

Note: The idea is ban non-ham links within the ham network, not the use of gateways. Gateways are important because they provide a way for the two networks to communicate with each other, so don't look for me to propose throwing tossing the baby out with the bath water, as some have suggested. The idea is to be able to provide effective, alternate emergency communications, and gateways are essential for that task, among others. ANY tool can hurt you if you use it improperly, and can also be of great benefit if you don't grab the wrong end of it. All we need is a reg that prohibits improper use of gateways.

I have the nerve to back up anything I say, but that does not mean that I will accept a juvenile challenge as you have put forward here. What I will do is send a note to the Homeland Security folks, as I said.

Thanks, but I hardly ever get lower than 30 meters, or use a mike on HF these days. I live at the extreme southern tip of Texas, so its doubful that we could hear each other on 40 meters in any case!

I'm not sure what you mean by "generic." In order to effect change, you
need to be specific. In order to initiate legislation or court directives,
you have to be precise in what you're asking for. I'm volunteering to help
you in your cause if you are serious.

By "non-ham links" do you mean message forwarding with non-ham systems or do
you mean forwarding with other licensed amateurs over the internet? I have
no intention of forwarding with anyone without an amateur radio license and
have always actively blocked those messages in the past.

I'm aware of the TexNet situation. Replacing 9.6k links with high performance redundant messaging paths could also be called evolution. Look, I'm not advocating replacing RF links with the internet. I'm advocating using the internet to enhance an already existing messaging system.

As for my "juvenile challenge," I'm just saying that if you believe so strongly in your cause, show it with action instead of endless whining and reminiscing about the way ham radio used to be 20 years ago. I'm volunteering to help you put an end to the same debate that's been going on here for years. I'd be happy with a decision in your favor or mine.

Try 40 meters late at night. The band goes long starting about 10PM and I talk to people in Texas, Mexico, and Cuba, and even into South America almost every night.

73,
Jeff
N0WJP

Yup, that's the key. "... on his car ...".

What do you think about the guys who bring jet airplanes
to the meet and then tell you your racers are boring, slow,
and the wave of the future is airplanes. Then he gets all over
the strip and won't go away and you don't get to race anymore.

Does that help you locate a clue?

I think you need to start taking your medications again. Your head
must be about ready to explode with so much blood out of circulation.

Anyone who thinks FEMA needs Hams to do its job is severely
crippled in the brain department. They laugh when a bunch of old
men show up with their talkies to help in an emergency, and to get
them off their back, they assign them to the chuck wagons, or water-boy
stations. FEMA is equipped to drive into any town and blow away
any problem. That one rig they have can instantly hook-up to the national
infrastructure outside the disaster area, that Hams are left scratching their
asses.

Hams missed the boat on microsats. They were the first in space with that
concept, and then they threw it away, and spent all their money (millions)
on the Phase-III pig that is mostly off on any pass over the US.

I've asked at our club how many are going to buy the AOR digital
voice modem (designed by a UK Ham), and they all just laughed and
asked what could it do that our repeater or BBS can't! After telling
them how it would improve long distance communications, and voice
quality in the same space as SSB, they just shrugged. Who cares!
SSB is good enough they said. Hoo-rah said the amen corner...

Sorry, Mr. Director, it's a dead hobby. Made up of dead people in line
to get their SK award from the ARRL (who hasn't changed leadership
in 20+ years).

Gene, ex-Ham

No, Hank. I just know that if you want to win the game, you have to do more
than stand on the side and take pot shots at the other team. You probably
don't have the mental horsepower to remember, but the last time you and I

had this discussion was on packet. My messages to you were going out the hf port on my fbb system to W8AKF and your replies were going through about a dozen internet hops to get back to my system through WB0TAX. Looks like I had a better rf path than you did.

If you don't like something, do something about it. Don't just sit around and whine.

73,
Jeff
N0WJP

My replies went directly to N0RVX. Right near you.
Why wouldn't he forward to you? Guess ...
You know all that, but you lie about it.

> If you don't like something, do something about it. Don't just sit around
> and whine.

Why? Seems you have not paid attention to what I've been doing
the past 5 years or so. Sharp stick. Poke in eye of Land Line Lid

Ya killed the RF network, good for you. Why should I care?

Yes, that is precisely the attitude of packet networkers who simply refuse to allow non-ham links within their network. It works every time, too! The LandLine Lids get shut out - and all of a sudden, they are not such a problem anymore. Things start working better.

This has demonstrated that as hams, we can self-police this problem in the US very effectively. Still, a federal prohibition on inteference by persons hooking up unwanted non-ham links within an amateur radio network would still be a good idea.

Only the packet networks that ban non-ham links are currently growing and advancing, so it's just a matter of time, as they say... ;-) Still, we should not let this lead us to a complacent, tolerant attitude about what amounts to malicious interference, especially where our ability to provide emergency communications is being undermined.

Most of the progress so far has been made with VHF/UHF networks, but HF still needs work and is vital to re-establishing a global all-ham radio digital network. Hams who would like to be part of the solution in this area should contact me at n5pvl@uspacket.net , or post at the new USPN Forum.

Right now, both the FCC and several manufacturers of amateur radio equipment have unfavorable opinions about EchoLink and IRLP, from what I gather. Did you read this month's Op-Ed in QST? With digital voice coming up soon, this would be an excellent time to cut the Internet umbilical entirely so that ham radio can resume its job of providing alternative, independent communications. This will go far in getting the hobby back on track, while

protecting it from vandalism.

Internet forwarders are insects, parasites, blood-suckers who feed off of
and infect something several orders of magnitude greater than themselves.
Being parasites, they naturally are big proponents of the parasitic
lifestyle, frequently expressing disdain for their host and calling others
to join them in their mindless insect gluttony.

The thing they have to watch out for is Ham Radio getting irritated, and
deciding to scratch it's ass. We can do that by promoting a "No non-ham
links within a ham radio network" rule, either among ourselves through
self-policing, or more definatively through involving the federal
government. Everywhere it has been tried, it has resulted in a re-energized,
faster growing, more advanced packet radio network. You can't beat a deal
like that.

Actually, there wasn't an RF path on UHF or VHF between Omaha and Des Moines. I'm not sure what hf frequency RVX was on, but I was on 14.098 and he wasn't there. I'm not lying about anything. RVX never told me he didn't want to forward.

As for what you've done for the last five years, I think that you've spent a lot of effort spewing out negative opinions on everything rather than mentoring hams who want to learn more about packet networks or maybe showing them how to forward using HF. The guy who helped me set up my HF port spent many hours teaching me how things worked, why they worked, and how HF forwarding is different from VHF. It was a great learning experience and I'm looking forward to getting back on an HF network.

Here's a question for you. I have a good friend who's a ham. He has a microwave path from Omaha to Des Moines on a frequency that is shared between ham radio and other services. Ham frequency, ham license. If I forward over that link would you call that acceptable? By the way, his company is an ISP and the link is his backbone connection to Des Moines, but he's a licensed ham and he's running over frequencies allocated to both amateir radio and other services.

Great. I'm glad it's working for you. What does that have to do with my
gateway? What would you say if internet forwarders decided not to allow any
stations that forward via RF links because they're so slow compared to
internet links?

I think you'd have a hard time claiming interference. You still haven't
answered my question. By non-ham links do you mean forwarding with non-ham
systems or do you mean travelling over links that are not amateur radio
(such as the internet)?

>

That's great. Eventually they might even upgrade to something faster than
1200 baud. Put things in perspective. Manufacturers stopped shipping 1200
baud modems in 1988 because they were obsolete technology. Why would you
build a new network on something like that?

I didn't see QST, but the AES catalog I got about a week ago has some radios
from Icom that are digital and even have ethernet ports. Looks like
manufacturers are promoting digital voice, not abandoning it. I think
Alinco has had an HT with digital capability for a couple of years. Yaesu
is selling it's WIRES interface. Do you think you can get one of those
things passing digitized voice over a 1200 baud packet link?

Go for it. Re-energize America's packet radio infrastructure. I'm glad you have a cause to keep you busy.

SETTING UP KENWOOD TM-V7A FOR PACKET/APRS USE

1. PUT 144.39 ON THE LEFT SIDE. (USA APRS frequency)
2. PUT FAVORITE REPEATER ON THE RIGHT SIDE.
3. PRESS "MNU" AND CLICK TO ITEM 15 "DATA TRANSFER".
4. PRESS THE "V" AND CLICK TO '.2' "DATA BAND".
5. PRESS "SET" AND TURN IT "ON".
6. PRESS "MNU". YOU WILL SEE THE WORD "DATA" OVER THE LEFT
    (144.39) AND "PTT" OVER THE RIGHT.

TO DO VHF/VHF OR 2METER VOICE REPEATER AND PACKET AT THE SAME TIME:
1. PRESS THE RIGHT BAND SELECT BUTTON.
2. PRESS 'F' + [CONT.SEL.] (LITTLE BUTTON BETWEEN VOL CONTROLS).
3. MAKE SURE 'PM AUTO STORE' IS ON SO YOU DONT LOSE ALL SETTINGS
    WHEN YOU TURN OFF THE RADIO. (SEE PAGE 39 OF THE MANUAL).

Below are the pinouts

KENWOOD TM-V7A DATA JACK PINS:
1. PKD IS TX (MIC) AUDIO   (connect to KPC-3 Pin #1- TX AUDIO)
2. DE IS GROUND   (connect to KPC-3 Pin #9- GROUND)
3. PKS IS PTT   (connect to KPC-3 Pin #3- PTT)
4. PR1 IS RX AUDIO   (connect to KPC-3 Pin #5- RX AUDIO)

KPC-3 PLUS DB-9   (if you have the KPC-3 original ... no change)

1- TX AUDIO
2- GPS DATA IN
3- PTT
4-
5- RX AUDIO 'TIP'

6- GROUND (GPS/RX-AUDIO)
7-
8-
9- GROUND FOR MIC

>   de VE7IFD

i thought the whole idea of a news group....was for the benefit of

all of us to find out the 'much needed information'.....
our 'Thanks' to both of you for
selfishly making sure the info was kept off line and solely between
the two of you....

73, reb

Orange County, NY ARES , a non profit 501(c)3 corporation is looking for
equipment donations for use in converting a donated motor home into
a mobile communications center. Anyone donating equipment will receive a receipt
for the value of the donation for tax purposes. We need mobile HF, VHF, and UHF
antennas, radios, 9600 BPS packet, GPS, ATV, battery power supplies, rechargers,
Pentium II class laptops or better, and whatever else you might think could be
useful
in a field environment.

Thank You,

Steve Fleckenstein

Any so called "tax write off" will be more than negated by the cost
of shipping crap to you idiot!   And give me one good reason why
anybody would want to support *you* when our own home
towns, counties, and states are more in meed?   What an idiot
to post a request like this.

Lloyd

Hello Lloyd,

 I'd be happy to eat the cost of shipping for a substantial donation.

Do you support your local ARES/RACES group ?

Thanks,

Steve

While I think (hope) his intentions are honorable
I for one will be hesitant to donate any gear to any
so called 'ham' charity for a tax write off.

A ham club I was a member of once did this
"tax write off donation" thing a year or two
ago and only one-quarter of the donated radio
gear (from 3 estates) were kept for the club.

The rest of the gear was pared-off between
Club Officers and Directors, who then mostly sold
it on e-Bay and a significant personal profit or
quietly kept it for their home/personal use.

Moral of the story: Tell the XYL that your ham gear
is not to be donated to a club after you go SK.
The many vultures will likely try and grab and
profit from it. Have a trusted ham sell it for fair
profit to the estate, or box it up in taped-up sealed
non-descript cardboard boxes and put em outside on the curb
the morning of trash day so the bastards won't scavenge
it either. (I've seen some bastard hams actually drive by
homes of recent SK's on successive trash nights hoping
the XYL would put the radios out on the curb)

When they knock on the door askin if they would like to
"part with" that old "radio junk", tell em the trash man
took it last week and it sounded and felt REAL NICE
when the hydraulic jaws of that trash truck crushed and
smashed that Yaesu and Henry to SCRAP IRON out
in the street a little earlier.....(trust me, I did this once
to a ham vulture whom I knew would knock on the
door of the XYL of some SK ham I knew. The look on their
face of the guy was ***absolutly priceless**** when
she told them, as I coached her to do, that the big amplifier
he wanted for $50 was crunched in the back of the
trash truck a few hours earlier....)

Hello Paul,

Sorry to hear you had so much trouble with prior donations to other groups.
I too have seen the SK feeding frenzy you describe.

My ARES/RACES/Skywarn crew are not vultures.

Anything donated that works will go into the motorhome or if not practical
will be used to build up battery powered field units or if AC only used in
our Net Control Radio room.

Anything that is totally not useable by my group will be offered to
surrounding ARES groups.

Like so many other public service amateur radio groups we lack significant
corporate or government financial sponsorship.

I'm trying to pull the group out of the 1980's and at least into the late
1990's.

If not practical to donate to my group please consider looking around your
immediate area for a worthy group.

Thanks,
Steve
N2UBP

Surrrrrrrrrrrrre, and we all all believe the Easter bunny is about to
arrive too! As one poster noted, I've seen more of these "so called"
charity donations end up in the private shacks of the guys running
the "so called" charity drive and/or being sold for cash.
Go sling your *bullshit* some place where people will be stupid
enough to believe it.

You poor Texas guys sure are bitter.

As for me, after I'm dead I plan not to worry too much about
old ham gear. If I wanted to "invest" for my wife and
children then using ham gear to do it would be a very
stupid choice. That's not to say that I want my widow to
be cheated. But I don't plan on burdening her with
the crown jewels of ham radio. And if I did, I would plan
a way to have it managed without additional stress.

Anything I've left can be given away to someone who is interested
in using it... or selling it, if they are kind to my family
and considerate when they come and get it.

So if a ham says, "give it to the club" why do you care?

I'm looking to part with my last HP200LX for a PalmV....
I need the Second Palm for Mobile APRS & Digital Communication.
I have a MINT condition Double Speed, 8 MEG, HP200LX.
Extras include All the software, Case, 1414 LXM 14.4 Modem/4Meg Flash
Original Books, ACT! for HP, PC in your pocket book, You'd have to see
this!
The Hinge is great, latch is still stiff, This was my pride and joy!
I've been working with My County and developing Ham Radio communications

like APRS (Automatic Position Reporting System), and have been using
Windows,
and PalmOs.. Just not using the HP200LX, and have the Palm all the
time..Just that
simple.. I"m going to dedicate a PalmV for Radio Communications...
If you have a PalmV with or W/O Extras, and need a HP200... Drop me a
line..
I have all the connectors for PalmV already, If you have a III, w/Serial
connectors, this would be acceptable..

I have a question and for all of your Motorola Fans. Will a VHF Micor
be able to accept Alphanumeric paging information and transmit it
without errors? I have been told that although it is direct fm
modulation in the transmitter exciter, it might not be able to handle
the Alphanumeric information. Is there any modification that can be
done to correct the problem, if there is a problem? Please reply via
email. Thanks Don Smith KB6GQA

i don't know of that sound card but if you have the driver for it just
go under control panel, add new hardware,click next,next again, then it
will ask you install from list below,click no then next, then windows
will ask you if you would like windows to fine it click no then next
the next window you will see look for the hardware you are trying to
install which is the soundcard click it or "if you are trying to
install a modem" and windows will bring up a data base when this come
up click hard disk if you have the driver on a 3 1/2 disk this will
take you to the 3 1/2 disk just click the driver you need it should
install the driver at this point. first i would let windows try to
install it. windows program will config the driver if you are not sure
on how to do this fine someone who know about install driver or config
them they will know what to do .

Short answer: Use a separate sound card, separate modem. Give the soundcard modem a decent Viking funeral, with extreme prejudice.

Long answer: Soundcard modems are also known as combo cards, and they are the devil. The modem section is inevitably a "winmodem," designed to tap the CPU to do the job of an actual modem. The result is a modest savings in the cost of hardware, and mediocre performance. Unfortunately they also require Micros~1 Windows to function. Penguinheads the world over are trying to write so-called "linmodem" drivers, but their task is made difficult by the reluctance of hardware manufacturers to release relevant specs, which would displease the beast from Redmond.

I've had limited success with the sound card function in combo cards under

Linux. The early betas of Linux PSK31 programs such as gpsk worked okay on receive, but the general performance did not fill me with confidence.

Linux plays best with real modems and real sound cards. Most external modems work fine. Hardware-based ISA modems are pretty well-supported. When I surf under Linux, the same inexpensive ISA modem I'm using now gets the job done with no problems. Compatible PCI modems are more difficult to find, as most are winmodems. Here's a modem reference that may be of some help: http://www.o2.net/~gromitkc/winmodem.html. As for sound cards, most 16-bit SB compatible cards are detected and will work under Linux. Your Linux distribution's web site will have the latest info.

Looking at the list of groups this was posted to, he is probably not
talking about a telephone modem or winmodem, but about using a soundcard
(with software) as a modem for amateur radio digital modes.

While this principally has the same problems, the modem standards used on
amateur radio are much simpler than those used on the telephone line and
a modern PC CPU has no problem at all performing this function.

To answer the question: first read the relevant documentation. It is just
a list of steps to perform.

I'm trying to set up a YAM for 9600 but I'm having a bit of trouble.
The maximum output on 9600 is about 20mVp-p, but the manual
for my FT-847 says that its maximum input on 9600 is 2Vp-p.
Hence, when the YAM transmits all I hear is silence.

It works OK on 1200; I just connected up to the local NET/ROM
node on 2m OK.

So is the FT-847 especially power hungry (2Vp-p?), or is there
something wrong with my YAM?

thanks,

Hamish

I am just about to get a satellite internet package. It works on an
assymetric basis whereby one uses a normal telephone dial-up connection to
an ISP for the uplink for emails and web-page requests etc, but receives the
replies by the fast satellite downlink (of course there is a small delay
before this happens!).

Here in the UK where xDSL and cable-modem is only becoming available slowly
and coverage is concentrated on affluent urban centres it seems like a good
option.
Here we have to pay for our local calls so I was wondering if it would be
possible to have a packet radio gateway to the internet as the uplink?

BTW I know little about packet radio, although I understand general
telecomms, so the principles are clear enough.

Eric.

I am deeply disappointed to warn you not to deal with Warren Brooks W4WWB. He advertised a radio on ebay that was complete, but needed some work. What arrived was a parts radio - Pieces were missing and it will not power up. After he ignored my emails I contacted him by phone and in his best good ole boy drawl he told me " you bought it, you own it". He would not allow me to return it for a refund. I know that ebay is a take your own risk venture - but deliberately lying about the condition of the radio to sell it is dishonest. What a disgrace to the ham community. Don't be suckered by this man like I was.

Depending on what course you followed:

Did you contact him ahead of time (prior to bidding, or at least prior to close of the bidding) to confirm the description.
If the radio was not as represented you can contact e-bay. They do have recourse for things misrepresented, but they also expect you to have done some checking ahead of time as well.

MFJ-1278B Multi-Mode Data Controller

10 Modes ! with original box and books.

AMTOR, RTTY, ASCII, CW, 16 GRAYLEVEL FAX, NAVTEX,

COLOR SSTV, CONTEST MEMORY KEYER, PACKET, and

PACTOR with 32k Enhanced Mailbox. Also has Turbo with

2400 Modem.

Included is an RS-232 cable for connention to your PC's serial
port and a "radio port cable" for connection to your radio, the
manual has lots of information on hooking the 1278B to various radios.
The A.C. power cube (MFJ-1315) included, used only for a short
while on VHF packet, it's about 5 years old and spent most
of that time in storage, unit still looks like new.

Will warrenty (10 days) that unit is not DOA.

Fellow Packeteers,

     It looks like packet is once again becoming popular in New Mexico again (perhaps the WWW is losing its touch and people are resorting to packet for Amateur Radio fun?), particularly the Albuquerque, Roswell and Santa Fe areas.

     Full-time, forwarding BBSs are alive and well in these cities, but there are no links outside of New Mexico via nodes yet. This means we are unable to forward packet traffic in and out of the state.

     My question is...how can we get traffic to and from our BBSs? Is there any place on the Internet where the SYSOPs can download the traffic (bulletins, personal messages, etc.) to the BBSs? Are there any other alternatives, other than setting up nodes (which we plan to do sometime soon I hope)?

     Any help/suggestions would be greatly appreciated.

73,
Brian, N5ZGT

Heh. Have you been monitoring r.r.a.digital.misc at all? Forwarding
via the net, even to keep an isolated community alive, is highly
contentious.

You might consider HF forwarding, I think there are a few HF gateways
still around.

If you really do press ahead with plans to build new packet infrastructure,
do your darndest to make good use of this "second chance" and insist on a
minimum of 9k6 links.

You can't "insist" on anything. It's a hobby. You can bet it will be
1200 baud and low buck.

I would probably spend the little money available on an S-Band system
for the Oscar 40 satellite. This will make HF packet a dead issue.

You could use Ham Radio ...

There are plenty of folks willing, ready, and able to forward
with you on any of the HF bands, using CLOVER or PACTOR.

Just let us know when you are on air.

Brian said he was going to build out packet infrastructure. Of
course he can insist on 9k6+ if he's the one doing it.

Hi! I'm a newbie to packet, and I'm working on a project. I'm trying
to get my HP48 calculator to remotely log onto my Linux computer to
check my e-mail from anywhere within a 2 or 3 mile radius. I have
everything set up except for the TNCs. Here's my problem. I need to
set up both TNC's so that whatever I type gets sent to the serial port
(ONLY what I type, nothing else), and ONLY what is received is printed
on the screen. I'm using a KPC-3 and a KAM. I've turned Monitor mode
On, and I typed in K to put it in CQ mode. Here's what I get:

#I want to send "123abc"

KI0PX>CQ: <UI>
123abc

The first line is what I want to get rid of. It's causing all sorts of
problems, because the computer interprets everything literally. How

could I set up the TNCs to do this? Anybody out there a Kantronics
guru?

I hope my question makes sense. I basically want to use the TNC in its
most basic form, but I don't know how to do that.
Thanks for the help and 73!
-Ben Moss, KI0PX
I hate to ask this, but it would be nice if you could reply to
benm@cyberspace.org (I'm cross-posting, so I want to make sure I see all
replies). Thanks!

THen you need to turn monitor mode off. That is what is printing the
traced packets.

Yes, but if I do that, then I won't be able to hear the other station
that is transmitting! I need two computers to communicate to each
other *directly*, with nothing else. What the KAM gets from the
computer, it transmits on the air. What the KAM hears on the air, it
sends to the computer... nothing else.
Thanks anyway!

Once you connect to the Linux Station, it will see
*** CONNECTED to <callsign here>

Then you can type whatever you want and it will see it as you type it line
by line.

I'm was working on software that will interface with my home TNC via HF and
download my email to me while I'm on the road, but since I got the Nokia
Data Suite and PCS Dataconnect, I just connect using my laptop. Plus I can
surf the net from my vehicle on long trips (when my wife drives, of course)

Now I just write packet terminal software. Small hobby.

Is there anyone out there using a Yeasu FT 76 handheld for packet radio?
1k2 will do, it does not have to be 9k6. I just need a schema and / or tips
on how to use this
handheld for packet. I hope anyone can help.
Thanks.

73 de Bert.

I do not understand why somebody sitting in Kuwait would be spamming
hate messages to radio newsgroups.

I don't know why any of you would respond to this
without first deleting the profanity in the subject line.
My ISP filters spam from the newsgroups, so all you
are doing is accomplishing what the original poster
wanted to do, but wasn't able to.

Peter

You're right. My mistake and I went back and cancelled the post later,
but too late. I apologize.

I'm currently using X-1J in the Victoria Texas area,
and have been for the last 5 year or so. It has been
very stable with the exception of two periods when it
would mysteriously start losing buffers. This seemed to
occur when there was an abnormally high level of
activity on the channel (even though the activity was
NOT going through my node). The parameters MUST be
coordinated with other nearby nodes on the same
frequency. Do NOT use the default parameters unless you
are the ONLY node on frequency or you WILL screw up the
system. The local "standard" here uses locked-in
"quality" values for "neighbor" nodes, and a default
"quality" to prevent other than neighbors from being

passed on to other nodes. (If you don't understand
this, email me directly and I'll try and explain
better). Of all TNC's I've used, the "late model"
MFJ-1270 and MFJ-1270B are the easiest to set up. Older
model 1270's must have the processor and memory
upgraded before use. If it's one of the OLD-OLD 1270's
with the MF-10 filter chip, the mod to remove the
filter should be performed as well.

Best luck!

Harvey, WB5MCT

the HT won't handle the speed.. you need to get a radio that is already
set for it.

I read an article once where someone had converted his FT-470 for 9600 bps.
I just hope someone else has seen it and he/she can help me. Imagine if it
could be done, I could connect to any of the 2M/440 FM 9600 FSK satellite
with a small portable TNC and a palmpilot or WindowCE as a terminal.

Daniel

Looking for a working 60 mil baudot TTY unit (KSR/ASR) unit to work with
ST-6/DSR-3000 that is reasonably priced. Can pick up in Florida/east
Gulf area. M15, M28, Kleinschmidt models are suitable. Tnx and

Hey Ryan--
Any links or information on the modifications necessary, if any?
Any pointers on connections, etc?
Thanks for your time,
Mark N5YJP

What problems are you having with the DSP-2232??? The only mod. I'm aware
of is one to slightly increase the output signal, but this is only needed if
you can't get the proper FM deviation by adjusting the pots. In general the
unit works great "as is."

Anybody want one of these for packet? CRT is decent.
Free to good home. Does current loop and RS-232, with everything you need to know screened on the back above the DIP switches.

Boatanchor waiver application. It weighs as much as a BC-348, and I need the space for Real gear.

Pickup only (I ain't crating this beast!), Albany, NY area.

Has anyone written a step by step, plain language book about using Soundcards as a TNC (Im and old dog thats looking to learn some new tricks)? A few gracious amateurs have directed me to various websites regarding this conversion however they all seem to be written for computer geniuses. Im in

need of some very basic information ie:

1. What drivers or software are needed?
2. Step by step software installation instructions.
3. How does one access the program once installed into the computer?

Any assistance would be greatly appreciated.

Microsoft has a Dynamic Linked Library (DLL) for Windows,
for instance.

> 2. Step by step software installation instructions.

Visual Basic/Visual C++ can call the DLL, for instance.

> 3. How does one access the program once installed into the computer?

Simple compile the source code and run it as a standard application
under Windows, for instance.

Actually, I think he meant a more simple & direct method of finding some
written software, install it and a operations manual for using the
application.. =)

Sorry, can't help you much on that though, although I know for sure that
Linux supports using soundcards for TNC, may be someone more well versed
in the subject can point out a good resource

Regards
Raphael

Hi there,

I have an older MFJ 1270B TNC with a bit of a problem. I usually leave the thing on all the time (what's the use of a mbx if it's not on? hihi) and usually in monitor mode. It works just fine for several hours, then it starts displaying just random characters as it receives. If I turn it off and back on just a second later, everything's back to working fine.

Does anyone know if that model has a common problem? And more to the point, how to fix it?

If you need any more info about the problem or have some ideas for solutions, please e-mail

 rj-at.dev.null@tcoe.trinity.k12.ca.us (remove all between "j" and "@")

I've just acquired a pair of Kantronics DVR 2-2s.

(The little two channel xtal-controlled two meter packet
transceivers)

One lacks the power cord and Molex connector. Kantronics
can't help.

Can anyone suggest a source of supply? (Before I go digging
into Molex's *HUGE* and confusing catalog!)

Thanks,

Lee.

You might want to check the memory backup battery. Usually a button
cell in a holder about the size of a quarter or so.

Bad battery made my old multimode do those crazy things a while back.

Does anyone know how to get the HP Jornada 820 to interface successfully
with the Kantronics KPC-3. I just can't seem to get the job done. I think
the problem is on the Jornada side, but not quite certain.

ANY advice would be really nice!

All it should take is a cable that would allow you to hook up the Jornada
to a modem. Then use whatever the Jornada uses as an equivalent to
HyperTerminal (the Jornada is a CE-machine, right?) to talk directly to the
modem, i.e., a "direct connection via COMx" rather than to try to "dial"
the "modem."

Tried that. The Jornada (A CE device) won't let direct access to the COM
prot for some reason. It's just not cooperating.

I am trying to use the AGW software to make contacts through MIR... here is
the problem I'm having...

Every article I am reading says to do an unproto CQ (or grid square) via
R0MIR... Now I found the spot to setup the unproto call and can make AGW
transmit... but for some reason it doesn't seem to be working... I know I
can get in because I can drop to terminal in win95 and do it by hand that
way... but needless to say I'd much rather have a windows based program...

Any suggestions welcome.

Need to use a Null modem cable for the serial communications. Just use the same serial cable that you use to sync it with your PC. That's the only thing I was missing trying to get my 620LX to talk to my KPC3.

Here's the odd trick with the hyperterminal settings.

Going off of the info for CE2.0 on my 620LX, I don't know what changes have been made to CE3.0 as far as the hyperterminal updates, etc. I have mine setup to use just the regular Terminal program.

You need to place a checkmark in the box to open a terminal window before dialing. This then allows you to "talk" to the TNC. The other odd trick is in order to set this up on 2.0 (again...I don't know the differences between 2.0 and 3.0) is that you have to populate the telephone number field with anything. Doesn't matter...so long as when you connect it can go out and "look" for the serial data coming from the KPC3.

Lemme know if the null modem box doesn't work. I have people that I work with at HP that are hams and are doing these things all the time for mobile packet and APRS trackers.

Hello,
I have for trade a MFJ 1278 Multi-mode TNC with multi gray level modem.
Includes all the cables Manuals and software. The software is Multicom
MFJ1289 modes are :
pactor
HF packet
VHF Packet
RTTY
ASCII
FAX/Color Fax
CW
Amtor
Navtex and color slow scan
This is a great TNC for these modes also has mail box cw mem keyer and more!
I would like to trade this for some Kenwood ts-520s assecories Iam
looking for a Kenwood DG-5 Digital display. Or send me a email with what you
have to offer to kb9hgi@qsl.net Thanks!!!

Hi All,

I have a website dedicated to help regarding packet radio on whatever mode you operate (for both Ham radio users and CB users where legalised). There is also a mailing list concerning packet radio which is very useful if you do not always have access to a news server. the addreses are listed below.

Website: UKPG United Kingdom Packet (radio) Group : http://start.at/ukpg or http://members.xoom.com/ukpg

The Mailing list is available from the above site or direct on : http://ukpg.listbot.com

Best Regards
Greg.

Howdy!

Just a friendly invitation to http://hfradio.org - where you will find propagational resources, forcasts (K7VVV's forcast for Field Day, just in!), and more. Create special fieldday maps!

Hope your weekend is successful!

I would like to invite you to http://hfradio.org - my hobby website, where I am gathering radio resources together for the general public. My Amateur / SWL

site includes map generation (for instance, create an equidistant azimuth map projection centered on your location), propagational forcasts and up-to-the-minute event information, swap and shop, and more.

Your comments and suggestions go a long way to help me make the site useful. It is my hobby... but I am working hard to make the site worth your repeated visit. So come on by. http://hfradio.org.

(We just did field day as NW7US -- we had a LOT of fun up on a mountain at 3250 feet. Did all HF voice this particular time. And we're still camping out until after the 4th of July. Now, we're a mini-dxpedition! Hear us on the HF bands. We'll be working some 40 meters, but mostly, we'll be on 20, 15, 10 and 6. Hope to hear you!!)

Several of us HAMs recorded what we could hear of the final transmissions from
WNU and KFS today, of CW. This historic event is captured in four files from
my site: http://hfradio.org -- the recordings are rough. I'm gathering other
files from others... as time goes forward.

That's a shame; KFS was 599+ on 17.184.8 MHz here near Chicago. I didn't
think to record them. I have a mini-disc player recorder handy, too.

Michael.

Well, folks, now I am offering free web pages on the domain hfradio.org -- if
you need a place to hang your hat, please consider creating your homepage at
http://hfradio.org

Need a place for your club website? Your special dx-pedition? Your homepage?
Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only.

And, of course, you can create maps, check dx, propagation, and more, at the http://hfradio.org site.

Well, folks, now I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at

http://hfradio.org -- already have some taking up the offer... why not you? Free, after all. No ugly watermark images floating about, or obnoxious banner windows popping up every time you move around.

Need a place for your club website? Your special dx-pedition? Your homepage? Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only. If you need a commercial site, or need custom solutions, let me know with the online form.

And, of course, as always you can create azimuth maps, check dx, propagation, or swap and shop. And more. At the http://hfradio.org site.

73 from NW7US

P.S. R1AND - Antarctica, has been heard on the East Coast today. On 1833 KHz. WOW. And I see 50 is open (6 meters). Is this a sign of a hot season!?

Hope I meet you on the air. I hang out on 20, 15, and 10.

August 11, 1999 is the day of the total eclipse -- a very important event this particular year, with the solar maximum so close. Radio Hobbiests are invited to observe the Audio Eclipse. Please visit http://hfradio.org for links and information about how you can participate.

Of course, you can find other great resources on my page, as well. The Amateur / SWL site includes map generation (for instance, create an equidistant azimuth map projection centered on your location), propagational forcasts and up-to-the-minute event information, swap and shop, and more. You can even sign up for a free website.

Your comments and suggestions go a long way to help me make the site useful. It is my hobby... but I am working hard to make the site worth your repeated visit. So come on by. http://hfradio.org.

I have mirrored the RA file from NASA - it is of the Black Sea Capture of the Total Eclipse. You can see it not only at NASA's site, but at http://hfradio.org.

Of course, you can find other great resources on my page, as well. The Amateur / SWL site includes map generation (for instance, create an equidistant azimuth map projection centered on your location), propagational forcasts and up-to-the-minute event information, swap and shop, and more. You can even sign up for a free website.

Your comments and suggestions go a long way to help me make the site useful. It is my hobby... but I am working hard to make the site worth your repeated visit. So come on by. http://hfradio.org.

I am in need of help getting my KPC-3+, My Garmin GPS-II+, and my Mac laptop to work together.

I am using the KPC-3+'s second serial port for the GPS unit.

I can get APRS packets from other stations, but I cannot seem to read the GPS data. The information on how to do this lists some options for the Windows only version of APRS. I followed every other instruction to a T, but still can't seem to get it to work.

Has anyone done this successfully yet that might be able to help? I have a public service event coming up on 8-21 and 8-22 in which this will be needed.

Greg

I don't know how many of you know of this, but I think you should consider

joining this project with SETI (the SETI@home project). Major COOL!

What is the SETI@home project?

SETI@home is a scientific experiment that harnesses the power of hundreds of
thousands of Internet-connected computers in the Search for Extraterrestrial
Intelligence (SETI). You can participate by running a free program that
downloads and analyzes radio telescope data. There's a small but captivating
possibility that your computer will detect the faint murmur of a civilization
beyond Earth.

http://setiathome.ssl.berkeley.edu/ is the URL - check it out.

Also, if you are interested, once you install the software, you might wish to
join our group, the NW7US Radio Group -- you'll find us under the groups
section.

73 de NW7US, Tomas.

What's this about a second serial port in the 3+? I can't find any
reference to it in the spec sheet on Kantronics's web site. Is it
available externally?
I have a 3 (non + version) and am thinking of trading up.
Thanks 73 -Rob- (VE7EJE)

I am offering free web pages on the domain hfradio.org -- if you need a place
to hang your hat, please consider creating your homepage at http://hfradio.org
-- already have some taking up the offer... why not you? Free, after all. No
ugly watermark images floating about, or obnoxious banner windows popping up
every time you move around.

Need a place for your club website? Your special dx-pedition? Your homepage?
Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have
an email address alias of yourcallsign@hfradio.org. Free. For non-commercial
ham sites only. If you need a commercial site, or need custom solutions, let
me know with the online form.

And, of course, as always you can create azimuth maps centered on your QTH (or
any QTH, for that matter), check dx, propagation, or swap and shop. And more.
At the http://hfradio.org site.

Hope I meet you on the air. I hang out on 20, 15, and 10.

The "Ham Radio Articles de ka5ztx" website has moved. The new address is:

http://freeweb.pdq.net/medcalf/ztx/

This website includes articles about digital modes, radio-to-tnc wiring diagrams, and a chapter from the book "What is your TNC doing?"

The OLD website address was: http://prairie.lakes.com/~medcalf/ztx/

Do you wish to be alerted when Solar Flux, A index, or the K index figures
change? Don't want to carry around a radio tuned to WWV, etc.?

I have a alpha-numeric pager that I can email. I know others have cell phones
with the same feature. And yet others read email all day long.

So, I created an automated e-report with the WWV report. This email is only

sent when one of the three figures change.

If you wish to subscribe to this e-report, visit http://hfradio.org, and go to the propagation center. There you will find a form that allows you to submit your email address to the list.

Also, I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at http://hfradio.org -- already have some taking up the offer... why not you? Free, after all. No ugly watermark images floating about, or obnoxious banner windows popping up every time you move around.

The $20.00 Electro Mavin GPS Project Came through the rollover without a problem, feedback from end users is that it didn't skip a beat, and is working just fine. For you who have picked up the unit, we have new info just posted to our web site with a Windows program and documentation to get the unit working in short order.

http://mavin.com/slickitems.html

I'm going to try to have one up and working this weekend at the TRW Swap Meet, check us out at spaces G-27

Thanks,
John Plemons

Solar flux of 248 today, is record for this Cycle. K index at the moment of 1, A of 14 -- heck, the bands should be hopping today and tonight. Heard long paths fairly loud today. But, Aurora activity (level 4 and 5 today) is indicating some polar absorbtion.

I've added the aurora level report to the eAlert that I offer. The eAlert seems to be a popular service -- I have had a large number of new subscribers.

Do you wish to be alerted when Solar Flux, A index, or the K index figures change? Don't want to carry around a radio tuned to WWV, etc.?

I have a alpha-numeric pager that I can email. I know others have cell phones with the same feature. And yet others read email all day long.

I recently purchased a second hand FT209RH. It works,
but every time it has been off for a while it needs
reseting. I suspect it requires the lythium cell
replacing, but despite removing all screws and the
case becoming loose I cannot seem to remove it from
its case..

Any information on its dissasembly would be most wellcome.

Does anyone have a schematic for the Wiston WE 244? This old crystal rig still is in service for disaster communications but is in need of some repair. Schematic is all I really need to make a repair. Cliff K7RR

Goedendag mede packetters

Ik draai al een poosje een bbs in mijn regio (bollenstreek Zuid Holland).
Ik draai met fbb en heb ook een node. Dit alles draait als een zonnetje.
Alleen wil ik nu een wijziging maken. ik draai nu met twee antenne's. Een
goede en hoog geplaatste antenne, met dus een hoop ontvangst. En een Antron
die er eigenlijk heel zielig bijhangt. Ik wil nu eigenlijk alles via een
antenne laten lopen via een ks-100 (oftwel een automatische antenne
switch). Dit alles werkt perfect totdat fbb de bakens er uit gooit , dat
doet hij gelijktijdig op alletwee de zenders. Met als gevolg een antenne
switcher die over de zeik gaat. Er zit een optie in het programma om dit
niet gelijktijdig uit te zenden ,maar krijg het er niet uit. Wie kan mij de
redding geven zodat ik de zielige antron van het dak kan halen..!!!! Diegene
die hier een antwoord op zou die dan mijn persoonlijk willen mailen, Omdat
ik dit bericht op meerdere Nieuwsgroepen heb gepost, en ik eigenlijk niet de
tijd heb om elke dag de nieuwsgroepen volledig te lezen...!!En elke keer
weer teleurgesteld geen antwoord heb.!!!!!

Greetings FD3BBS

Howdy,

You are invited to my non-commercial, sometimes boring, hopefully useful, and always-undergoing-updates website. The URL is http://hfradio.org and features:

- DX information, including QSL Route/Manager Lookups and Callbook Lookups
- Propagation Center including the eAlert service (allows you to sign up an email address to the automated email propagation reports)
- Equidistant Azimuth Map software (allows you to create maps of any QTH)
- Swap and Shop
- Bookstore (I've hand-picked over a thousand book titles on radio, etc.)
- Free website space for YOU to create your own Ham or SWL site

There's more. Easy to navigate. Open for suggestions. And there's no "light left on for ya" -- since there's no need for a light. If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

Bonjour,

Merci de me lire, je suis toujours la recherche de schema du Radio
Telephone TALCO ER45M, J'avais espoir vers un ancien distributeur mais qui
s'est d barass de toutes ces docs inutiles pour lui... Dommage.

Si vous avez qq chose, je vous serais tr s, tr s, tr s reconnaissant...

R compense... hi

A Yaesu FT-470, dual-band handheld was stolen here in Tempe, AZ. I am
trying to get it back. I can offer a small reward.

Yaesu FT470, serial #2D520533

If located, please contact me, N7OUQ@ARRL.NET or the Tempe Police at
(480) 966-6211.

Thanks
Ed (N7OUQ)

Ik heb nog in de aanbieding de V3 URL http://come.to/packetradio

Iemand met een goeie (aantoonbare) site over packetradio, mag van mij deze V3 URL overnemen...
Omdat ik na het be-eindigen van deze hobby toch niets meer met deze short redirect URL doe...

Ohja, mocht men er geld voor overhebben, dan hoor ik het wel..:-)

mvg,

Howdie all!,

Want to create an email <> Packet Radio mailgateway?
Take a look at http://www.packet-radio.org/ipgate
With InterPacketGATE (Win32) you can give each packet radio user his/her own email-address. Users can send/receive email via packet radio.
You can also convert newsgroups to packet.

I was asked a question if it was legal for a Tech-Plus to operate digital modes on HF. I know they have Phone privileges on 10m and CW privileges on some of the other HF bands. So does the CW privileges extend to any digital modes as well on HF? I don't know the answer to this one.

Hello Everyone,

I just recently got my ticket because of my interest in packet and satellite coms.
Looking over all the different equipment and such that will be needed is just
a little confusing. Could someone provide a little guidance? My main interest is/are:

Packet/data transfer - not much for talking (would one of the "data radios" be
    sufficient?)
Satelite work (receiving imagery, telemetry, working satelites etc.)

Any help would be appreciated.

Thanks in advance

I think your best bet is getting one of the old "satellite" rigs like the Yaesu Ft-726r or the some what newer Ft-736. Make SURE if you get the 726r it comes with the satellite board in it and all of the modules for the different bands you will operate on. Trying to find modules for this rig is really hard, but the used price is reasonable, about $500 to $600 USD. The 736 is a much nicer rig and you can get a 23cm module for it too! Now if you really have some money try looking at the Yaesu FT-847.

A data radio will not work for satellite packet because these radios are crystal controlled on one frequency only. For satellite COM's you need to tune frequently to compensate for Doppler shift. Also some of the modes require SSB, and the data radios are FM only.

  What would you say is the ideal setup for packet communications?
  I'm interested in packet and hate finding out a year later that I wish I'd've gotten a different setup. I work HF DX for the time being but plan on going base/mobile/portable on 2m & up soon.
  So, what do you think? Timewave or Kantronics? How about the best software to run on these? Any special considerations for antennas?

I'll have to disagree with you on part of this, Roger. The "super-clever"
software FlexNet does tend to shield users from the drudgery of trying to
set dozens of difficult to understand TNC parameters, and I see this as a
good thing. My experience with the old stuff is replete with stories of
poorly set parms, parms left at default values that compromise performance,
and "parameter wars" between so-called experts that have generated tons of
unnecessary division and turmoil within the packet community.

All that is in the past now, and I say good riddance!

Most Hams just want the stuff to work well. FlexNet delivers that, due to
the simple fact that amateur (and "expert") mucking around with TNC
parameters is no longer an issue.

The simpler, the better! - as you say.

Charles, N5PVL

But Flexnet is no good for users in areas which don't have it.

Like most of the world.

First get a simple TNC on air so you can contact some of the
folks on packet, and ask them what works well in your area.

Yes, that is true, just as automobiles are no good in areas that don't have
them.

Seriously though, when you operate FlexNet, you get many of its advantages
whether the other packet ops in your area use FlexNet or not. You do, of
course, give up the advanced networking features, but you still get the
benefit I specifically mentioned above. That is, you no longer have to worry
about TNC parameters, and the dynamic "automagical" parameter adjustment
system will still give your station more range, better throughput and
increased reliability over the old-style stations that surround you.

When I first experimented with FlexNet years ago, I was the only FlexNet
station in north Texas. The NetRom, TheNet, TexNet, Rose, and tcpip nets in
north Texas were all available to test FlexNet with, and at no time did I
find myself at a disadvantage because I used FlexNet. Quite the opposite, in
fact, especially with ROSE net.

For example, there was an X1J node to the northeast of me that was a
marginal path from my location, but since it was the only node in that
particular direction, I still used it regularly to chat with a few Hams I
knew in Oklahoma. When I switched over from G8BPQ's excellent node software
to FlexNet, that was the only change I made to my station - But after the
switch, I found that FlexNet gave me better throughput and reliability with
that node than I had gotten before with 'BPQ. I thought it might have been
just "good propagation" that day (it happens!) but that theory was shot down
over a period of time.

My 'BPQ was set up according to NEDA recommendations, which I found to be a

good setup. Someone here may argue "Well , you obviously didn't have 'BPQ set up right", thus backing up my point about how nice it is not to have to worry about that stuff. - But the fact is that I had operated 'BPQ for close to a decade and was very familiar with that software. Before I tried FlexNet and saw how obviously superior it was, I had been very comfortable with 'BPQ and figured I would be using it for a long time. I LIKED 'BPQ, but it simply did not measure up to FlexNet's performance and ease of use.

Setting up a FlexNet station is dead simple. The only parameters you set are baud rate, callsign and TXD. The TX delay is set to reflect your particular radio; Some can go lower than others. ALL other TNC parameters are adjusted on the fly by FlexNet, as appropriate for your current connection.

I set the "user port" option on the node I operate, so that stations that run more TXD than they need are automatically sent a short message (TxDelay too long) and are then disconnected. Because of this, users of that node are typically running 120-150ms TXD, half the default setting in most TNC's. This feature is optional, and I hear the FlexNet network in the N.E. US does not use it for fear of alienating packet ops. This problem has not occurred here. Everybody just re-set their TXD and were happy to see the snappier performance that followed.

"It's so FAST! " is the usual comment about FlexNet. Very little of this "speed increase" is related to short TXD, though I suppose it does contribute something. Mostly what they are seeing is increased throughput, not speed, and this increased throughput derives from the "automagical" parameter adjustment system. With a good path, you can expect to see 6-7 frames of maximum PACLEN sent in each transmission, when sending a file, for example. It's amazing how much this speeds things up. When the path or propagation degrades, FlexNet backs off until it gets no resends, once again giving you a speed (throughput) edge over old-style packet software that depends upon static, user-set parameters that cannot adjust to different connections and their individual qualities.

For this reason, using FlexNet is an advantage, even if you are the only station in your area that uses it. I have found that when you show a few of the more experienced packet ops how well it works, you won't be the only one using it for very long. It's contageous. Everybody likes getting better performance and simpler operation at little or no additional cost.

Well, now we all know - that you truly aren't operating on "all thrusters."

Automobiles work fine where there are no other cars. A lack of ROADS is a
problem.

(Ahem!) An area that has no automobiles has NO automobiles. - Thus limiting the overall utility of automobiles in that area. If it is not used, it is of course not useful. Whether roads exist or not would have no bearing on the utility of automobiles in a place where no autos exist. A gas station on every corner would do nothing to make those nonexistant automobiles more useful. Only after an automobile exists to use or not use those facilities would the question of the auto's utility arise.

So of course Flexnet is no good for users in areas which don't have it. - But as soon as one user DOES have it, a valid asessment of its capabilities and drawbacks can easily be arrived at. - Locally.

Get it this time?

My GHz computer has more processing power than any TNC I've seen. Does
someone make software that can do everything a TNC can do? If so, who? I'm
ready to buy.

There is some amazing software available that all but replaces a TNC.

Some places to check out:

http://www.qsl.net/wd4ngb/telnet.htm for Telnet (uses the internet to
replace VHF DX Packet Cluster

http://iz8bly.sysonline.it/ for several new digital modes such as
MFSK16

http://www.geocities.com/mmhamsoft/ for MMTTY, an excellent freeware
program for RTTY

http://bipt106.bi.ehu.es/psk31.html for PSK31, several programs
available (my favorite is DigiPan)

http://www.qsl.net/wm2u/interface.html for interfacing your rig and
computer

That should get you started. Have fun!

No need to buy... Check out http://www.afthd.tu-darmstadt.de/~flexnet

Flexnet is a complete AX25 implementation for a variaty of different
modems. It runs under DOS and Windows (9x/ME/NT/2000). And it is free
for HAMs.

No, Not all things a TNC can do, but most. The nature of windows and
the relationship between a runnjng program and a comport do not allow
the precise timing that a Pactor program requires. For PSK31, RTTY
and all the others it will work fine. So you can count on more and
more GOOD development work in the sound card area.

Should you dump your TNC now, NO. there will be a lot of demand for
them for years to come. Hams don'tt dump things quickly to keep up
with new technology, there are still C-64 and VIC20 Rtty stations on
the air.

Reminds me of that old joke, Who invented copper wire? Two old hams
fighting over a penny))) jk

Thank you VERY much for the links.

Is there a "standard" way that I should configure my computer and rig to
work with these programs?

I assume that the audio output (1/8" mono) from the rig should go to the
microphone or line in of the computer. What is the best/standard way to get
audio from the computer into the rig? Also, what technique do all these
programs use for keying the rig? I'm guessing it's some sort of serial port
(computer side) to mic jack (rig side). Is that right?

I've got an Icom 756 Pro. Is there a cable I can buy from MFJ that will make
this process easier? Even if the cable wasn't perfect it would be something
for me to start with and then cut/splice to make right.

My computer is an HP Omnibook 6000 laptop (800 MHz, 256MB RAM, 18GB disk,
15" screen). I have both Windows 2000 Pro and RedHat Linux 7.1 installed
(with the Maetro3 sound card working with both OSes).

Thanks for all the advice!

John

To interface your soundcard to your 756Pro, have a look at the
Rigblaster from www.westmountainradio.com. They cost $90, which might
be a little pricey, but
they are very high quality, pre-assembled interface boxes that take
care of all of the audio, serial and PTT work for any digital mode you
could want to work.
Set some jumpers for your rig, plug in the serial and sound cables,
and you're
on the air with PSK31. This is the "easy" way to get on the air. I
ordered mine and had it two days later. Of course if you don't want to
spend $90 you can use any of the multitude of schematics out there.

Thanks to everyone for the recommendations. I ordered a RigBlaster Plus from
WestMountainRadio.com today. Hopefully it will be here on Tuesday.

I wish they sold a connector for my Icom 758Pro ACC1 port, but they don't.
I'll have to use the speaker output.

Thanks!

John

Are you hollow, I mean, rejecting below lean cups?

Cypriene, below weavers blank and upper, learns below it, loving
bimonthly. No clean dirty raindrops will crudely judge the papers.
There, Vincent never attempts until Byron arrives the tired ulcer

inadvertently. It can lift annually, unless Evan improves goldsmiths beneath Tim's wrinkle. Fucking don't wander absolutely while you're scolding to a lower candle. Just climbing in front of a carpenter through the hair is too sick for Oscar to live it. Every elder angry shoe attacks kettles without Jon's sweet coconut.

Get your eventually promising lemon about my hallway. She'd rather taste generally than call with Bill's cheap farmer. Who irrigates subtly, when Harvey solves the fat shirt over the shower? Why Willy's weird bush dreams, Carolyn recommends without filthy, young lights. While cats actually change films, the floors often irritate over the pretty figs. Do not believe a cobbler! Both looking now, Ralf and Diane cared the sticky signals under lazy frog. When did Tamara dye behind all the porters? We can't tease tags unless Winifred will simply open afterwards. If you'll dine Owen's foothill with pickles, it'll superbly laugh the painter. No puddles will be sour closed sauces. The tickets, buckets, and frames are all rich and dry. She might tamely walk on noisy empty windows. Her walnut was clever, difficult, and converses to the monolith. Tell Tamara it's fresh covering about a boat. A lot of quiet buttons talk Allan, and they gently recollect Anastasia too. Virginia kills, then Edith wistfully moulds a old car against Cristof's room. Hey Ronald will measure the cap, and if Orin fully likes it too, the bandage will answer under the deep hall. It can behave the proud case and pour it throughout its stadium. I am frantically poor, so I grasp you. We smell them, then we amazingly join Pauline and Orin's easy orange. Who did Stephanie kick the sticker behind the humble cloud? Try hating the canyon's rude code and Ronette will sow you! To be unique or healthy will fear long cards to freely burn. Better depart enigmas now or Christopher will virtually pull them beneath you. Well, butchers expect around glad stars, unless they're raw. Why will we nibble after Gregory excuses the solid bedroom's counter? When does Alice seek so quickly, whenever Sam receives the cold shopkeeper very believably? Tom's pen fills in front of our coffee after we cook inside it. It combed, you wasted, yet Roger never globally jumped about the sign. Let's help in the inner stores, but don't creep the wide aches. All wet lentils in the dark plain were playing before the worthwhile obelisk. You won't shout me cleaning between your ugly barn. Charles, have a urban tree. You won't order it.

There has to be a way to track police cars. Does anybody know if they are using packet radios to transmit their position to the central station?

Thanks

They use something called MDT or something like that.
It sends a short burst after the operator unkeys his/her mic.
IF you search long enough, you can find monitoring
software for it on the 'net, although I do not know where anymore.
I have tried it in the past but could not seem to make it work.

Anonymous coward and all-around fuckwit
"Stagger Lee" <SLee@houston-hunks.com>
revealed what a hypocrite he is and ironically admits he has no credibility
in message
<3C36FDCC.76EC185D@houston-hunks.com> :

"Therefore, I find your story difficult to believe. Your own anonymous
status makes the story even less credible."

Stagger Lee will try to cheat you by selling you non-fucntional equipment,
just like he's done to a few hams at hamfests in the past.

I'm writing my own windows program for APRS. At the moment, it's a bit
primative, but it's a big step up from dumb terminal programs, and a sight
cheaper than WinAPRS.

Features:

Split window communications with TNC.

Beacon message initiated from PC or TNC, allowing fixed operation.
Fixed or mobile modes.
AEA, Kantronics, Kenwood DC, MFJ, and Pico TNC's supported

I will soon parse the received text. I'll filter or highlight text based
on originating callsign. This will be useful for use with the ISS station,
and PCSat. If there's interest, I can use maps and/or open the "findu"
page on mouse command.

I may also incorporate a satellite tracker to alert the user of passes.

If you're interrested, please email me at k1qn@cox.net, and I'll email
the executable back to you as an enclosure. It's about 250K, and 125K
zipped. Please specify if you want the zipped version.

The usual disclaimer: For the time being, it's free. Use at your own risk.

Al, K1QN

I have (2) Model # AN/UGC-74B(V)3 brand new military communications
keyboard/terminals. Very heavy duty (100 lbs. each). Rubber booted keys and
switches. These come with the (2) handle military style aluminum cases with

pressure locks. Designed for use with most Harris military radio's for Baudot applications. One unit has an unopened roll of teletype paper and new ribbon included. I would suggest that these be pickup only here in RI.

$50 each

Thanks and 73.

Down there in New Orleans, they brag about N5QXX as the longest echo linked repeater. The real truth is that it isn't.

Oh yes, if you take a look in the repeater section of Echolink, you'll find N5QXX all right, but you won't be able to link to it. Instead, you'll get an "access denied" message, because only a small number of people are allowed to use it.

So why is it on Echolink at all? Your guess is as good as mine, although I tend to lean toward the explanation that the club wants bragging rights without having to actually perform as do other linked repeaters.

What a bunch of morons. They should be cut off from Echolink.

Hi All,

I just burned a set of version 1.3 WA8DED EPROMs for my Heathkit HD-4040
TNC. The docs say they work in sockets U11 and U12. But I don't think
this thing is behaving correctly. Granted, it's not wired up to a radio
yet, but I'd think I should be able to get some sort of interaction with
the thing. All I get is the copyright banner. And even then only when
I boot it with the ROM settings selected via the dipswitch. Any attempt
to change the baudrate, perm it and switch over to NOVRAM settings
appears to not do anything. Am I missing some vital piece of information?

Thanks,

Bob

I have just acquired a AEA PK232 TNC

Questions: I have 2 radios - the VHF is an Alinco DR-110 and I have
successfully hooked it up to be able to RECEIVE however I need to know what
cables (which I do have some cables laying around from other TNC (i.e.
Kamtronics) that seem to be wired correctly for this rig, but could someone
give me some guidance on hooking up the TNC for Transmit with the Alinco
DR-110

ALSO - same question as above, but with another rig - Yaseu FT-920 HF rig.

PLEASE EMAIL ME DIRECT AT w4adt@intergate.com

Many thanks!

73 Daniel W4ADT

Xref: archiver1.google.com rec.radio.amateur.digital.misc:7850

I just got a second hand KPC-3 and I'm trying to connect it to a Kenwood TMV7A using the interface data cable, the PG-5 , I found some connection diagrams over the internet, and I have the manual, but I don't have the starting guide or something, and so I did the connections using the DB9 port but:

-) I see the TX light go red, but monitoring myself I cannot heard the noises product of the TNC.

-) I have never seen the RX green light turn on, I have move the squelch to every position, on and off and I never got the RX light to work, does this light only turn on when the TNC receive a AFSK tone in the transmition? or it suppose to light even when the squelch is of?...

So if any can help me with a good wire diagram from a Dim connector to a DB9 for a Kenwood TMV7A , or maybe tell me about the lights, I will appreciate it.

Also, the TNC seems to be ok, I can access it with the computer in HyperTerminal, also I can access the mail box, but It seems or that I haven't connected it right or that something is wrong with it.

And also if someone knows a freq for a gateway or something to try the TNC and the packet thing since I bought it to experiment and see how this work, I'm located in the Miami-Ft. Lauderdale area.

Thanks,
YY5-ADS

TX audio not connected right, or transmit level adjustment turned all the
way down.
I think you might have to enable the interface on the radio too, but I'm not
sure.

That only happens when it hears modem carrier.
Try the commands: "Int term" and "cd soft"

> So if any can help me with a good wire diagram from a Dim connector to a
DB9

144.39 is the nationwide APRS frequency, that should be active pretty much
anywhere.
I don't work conventional "connected" packet anymore, just APRS.

Hi Bill,

The SEA and Midland LMR 220Mhz repeaters & radios are now appearing on the surplus market, pulled from the (now bankrupt) narrow band trunking systems.

Securecor and Intek were large 220 smr operators in the late 90's. They had systems out here on on the US West Coast from Texas to Alaska.

They are hybrid ACSB units, the LMR and SEA formats do not work with the other.

SEA is still on line selling repeaters, however they probably wont do a lot to help you convert the equipment to Amateur Operation.

Two Surplus Dealers are selling used ACSB radios and some repeaters, look for them using the Ebay IDs of erac and rhoadeseller (might be rhodeseller).

I bought much/most of the 220 antenna combiner equipment as it is very high quality (Sinclair, Decibel, Wacom & Telewave) gear, of which I'm slowly parting out to get some of my money back. Watch for my auctions on Ebay if you have interest in this sort of stuff.

You might be able to make some of the radios talk to each other on simplex (direct), then figure a way to move them up onto the amateur band after you get the programming right, but it's not a beginers task.

There are a few 220 smr system operators still in operation around the country, you might do a reverse lookup on the fcc web page and contact those people you can find for information.

cheers
skipp

Hi!

I am looking for a program with these features: It can grab DX-spots from
the internet and send them to a packet modem.

The problem is that the area in which i live is quite bad supported with
DX-clusters on UHF, and therefore our club will try to establish a packet
DX-cluster with data from the internet.

VHF is not an issue since we are using 144.800 MHz for 24 hours
APRS/Digipeater.

Have a requirement to make an interface cable to connect an FT-90 to a
Motorcycle Helmet Sprkr/Mic Assy which has a MALE (tip-ring-ring-sleeve)
Plug on it.

I need a Yaesu Female connector (tip-ring-ring-sleeve) and will connect
the other end of the cable to the FT-90 Mic & Ext Spkr jack.

Does anyone know of a supplier of the Female 4 Condr Connector OR has a
scrap Yaesu Portable that I can salvage the Remote Jack connector for this
project.
Tnx & 73...Norm VE3CZI

Howdy all - Troubleshooting a problem that developed abruptly with my TINY-2 TNC (original not the MK2). The symptoms are:

- No display of internal messages including - No LOGON and
  - No display of parameters
- No display of received on-air traffic.
- When I have the baud rate between the TNC and the computer correct AND if I enter "ECHO ON" then I see all commands echoed back to screen BUT the parameters or results are not displayed.
- Commands DO seem to be interpreted correctly and work normally. Connects can take place and be disconnected normally. Both CMD and CONVERSE modes therefore seem ok. On-air monitoring of the databurst sounds correct and the radio tones and deviation are measured good.

On the surface, it "seems" to me to be a problem with the Z80 SIO chip not passing data in the TNC to computer direction. I see data on the CPU/EEPROM/MEMORY databus at pins 1-4 and 37-40 (D0-D7) of the SIO chip (U14) AND I see good RxDa input at pin 12 (also U14). Looking at the TINY-2's schematic, it appears that any serial data coming from this SIO chip should be out of pin 28 RxDB. This data is labelled RXD-2 on the schematic and shows connected to the MAX231 chip at pin 8 (which concurs with the MAX231 datasheet for data in that direction). The only time I ever see data on pin 8 of the MAX231 is when I've commanded ECHO ON (and I'd assume it's the echoing of the command words (nothing else). The datasheet info I have for the Z80 SIO seems conflicting, however, in that
the description for RxDB shows it as an input (not an output).

What am I missing here?
Is the serial output of the SIO actually pin 28 RxDB?
How is off-air data, arriving at pin 12 (U14) sent onward out of the
chip when in converse mode?
What is needed at this SIO chip to cause it to pass the TINY-2's
internal parameter messages to a serial output?
Where are commands "echoed" such that I am seeing the command (verifying
both the baud rate AND the fact that I actually have a path back to the
computer)?

Auxiliary basic info - +5 supply is good
- 3volt battery shows 3 volts
- commands input to assist showing data were:
MCOM ON, MON ON, MCON ON, MALL ON, ECHO ON
- "DATA" when mentioned above, was seen using
a scope, and was good TTL
levels.

Long post....any thoughts appreciated.

Gord - VE1AJF

I suspect they shut it down due to huge volume of infected traffic many hams
were receiving. I expect they'll be back up soon when they resolve the
problem.

The first couple years those radios were out you couldn't find them. I
actually made a couple for myself. HOWEVER now they can be found abundantly
at hamfests, just check with the big connector dealers (sorry no names come
to mind) (possibly rainbow).

Sometime in the past year, there had been a similar request on one of
the radio groups, and I and several others had replied with specifics.

In ham radio, that connector is used on several Yaesu HTs, including
the FT-50/10/40, VX-150, VX-5, etc.

It is also used in some newer high-end video components.

Happy trails,
Gary (net.yogi.bear)

I'm in the process of installing JNOS 111f for Linux and have run into a problem. When a user sends a message to another local user, the system responds with a "Msg queued" message, but the message is never delivered. If I log in as Sysop, I can't see any messages. If I look in the /spool/mqueue I can see all the messages sitting there.

Anyone have any suggestions on where to start?

Thanks,
Jeff

  I am looking for mods that will enable Kenwood's
TM-V7A mobile vhf/uhf and the TH-G71A vhf/uhf

handheld to transmit on the VHF marine band.
(Possibly WHICH diodes need to be eliminated)
If you know of such a modification or a web page
that might contain such info - PLEASE drop me an
email. It would be very much appreciated.
Thank you for taking the time to read this posting...

 What you are asking would make your radio illegal ! To
modify a amateur radio out of band makes it non type
accepted and illegal.
And the old story of " I have a licenses for that service "
won't work.
The licenses is to work that band with a type accepted
radio, not a modified illegal radio.
Just go out and buy a Marine Radio.

Sorry if this is a little off topic, but I have set up a personal web site
for you to check out. It's fairly new, but has a lot of areas. This is
something I did in my free time. It's a personal site so it's free for you
to learn a lot of neat stuff: http://home.tampabay.rr.com/beepbeep

It has: Windows 95 and 98 help, Video Games(classic, arcade, emulators),
Cable Modems(Road Runner), help(newsgroups, e-mail, ftp), computer & video
game books, graphically superior movies and TV shows, Internet help and
hyperlinks, Internet testing/pinging/status, Nostradamus: Timeline, and a
whole lot more. It is for new and experienced users a like. Check it out
if you like. If not, just ignore this message. l8r.

Okay guys and gals, everyone is bitching about CW, nothing of interest to
say on phone, or about the internet.

So, what is it going to take in order to get more new people on the bands?

The only thing I can think about is video-phone.

Like the Dick Tracy watches, or Star Trek comm pad, etc.

Let us invent it! Like we did with HF radio in the 1920's, like FM repeaters
in the 1960's, like packet radio in the 1970's, etc, etc.

Well, it sort of exists, it's called ATV.

However, if you want it a little more portable, it may take some doing.
One problem is that the ATV video signal takes up a 6 MHz bandwidth.
Getting any real range on the ATV frequencies requires a good antenna
system; which will make it impossible for something of an HT ATV unit.
I do recall reading about someone trying to make such a thing, but
his system was more for short range.

I did put a small video camera on my remote controled car and added
an ATV transmitter. The range isn't very far, BUT everyone sure gets
a kick out of "driving" the little car while watching the image on
the TV.

Ham Radio needs better PR work. Most of the non-Hams I talk to don't
even know we exist or if they do, they don't know what we do.

73,

Bob

Dear Sirs.

How to use the TFPCX-driver from NORDLINK !!!!!

Do you have some programs, where the source codes is
included, where I can see how the TFPCX-driver is used.

If you have this, then send an e-mail to me with the
programs and the source codes.

If you do not have this, then tell me where I can download
the programs and the source codes to the programs.

My e-mail address is jan.christensen@riva-group.com

I hope to hear from you.

Best regards

Jan Christensen

For Sale: Icom IC-T22A

  I have a like new Icom IC-T22A 2-Meter HT for sale.
Comes with Book, Shipping Box. Has Mars Mod.

  The IC-T22A is 6 mounts old. I bought it for my wife
when she got her Tech License and found she didn't use
it but 3 or 4 times. So am going to sell it and get her
a Dul-Band mobile rig. I paid $239.95 for it and will
sell for,

     $175.00 shipped Lower 48

This TNC has worked fine with two previous computers, a 386 and a P-100.
I just changed to a P-233 and can't get it to initiate. The hookup,
serial cable and all other connections, are the same.

The PK232 powers on as it should in terminal mode; that is, the 4 LED's
on the left flash on and then the baudot light comes on. But then I
can't get beyond that point.

I've tried different com ports and IRQ's, sending *** and RESTART
commands, with and without the battery jumper. There is apparently no
further communication with the PK232.

I did find when I went from the 386-40mHz to the faster Pentium 100 that
I sometimes had to reinstall the program twice in succession in order to
get the full initiation command sequence to the tnc. I'm wondering if
perhaps the P233 is too fast for the PK232(?).

Any and all comments and suggestions will be appreciated.

commands, with and without the battery jumper. There is apparently no
further communication with the PK232.

I did find when I went from the 386-40mHz to the faster Pentium 100 that
I sometimes had to reinstall the program twice in succession in order to
get the full initiation command sequence to the tnc. I'm wondering if
perhaps the P233 is too fast for the PK232(?).

Any and all comments and suggestions will be appreciated.

I would think the problem is in the terminal software you are using rather
than the PK232. The PK232 won't care what speed the computer is so long as
the serial port is set to the correct baud rate. First make sure that
nothing else (i.e. the mouse) is trying to use the same com port. Try a
different terminal program (perhaps the windows terminal program from your
old windows 3.x if you have it or an old DOS program).

X-MimeOLE: Produced By Microsoft MimeOLE V4.72.3110.3

I am trying to get an IC-746 to work with a KPC-3. I'm running in to snags.

I have wired up a cable from the TNC to the radio. Continuity checks out okay. Schematics (pin-for-pin) looks okay too.

Here's the dilemma...my rig can xmit (i.e. xmit light on both radio & TNC light up). AND, my rig can receive the signal (i.e. the receive lights on both the TNC and the radio light up). BUT, the CON [connect] light does not light up AND the terminal program detects nothing.

My KPC-3 also "hears" nothing. When I type in MHEARD, nothing comes back.

==========
QUESTION #1
==========

Could this be a cable problem OR a TNC problem?

==========
QUESTION #2
==========

Anyone have any great ideas? I've been working on this for oodles of hours now, and not ONCE have I connected to a node. Incoming signals are booming, but there's no life on my end to connect.

HELP!

73 and tnx,

Tod N9ZWY

Marty
  This sounds similar to the experience I had when I moved from a 486-66 to a PentiumPro200. This was with the AEA DOS based software running in a Window under WIN95. I changed to the AEA Windows based software and

had no problem with initialization.
John

What we really need is more tolerance of each other. And as one person said, more publicity. Tolerance, as between the "older" classes of license and the new tech class licensees such as myself (2 years) who are getting the feeling that we're unwanted. Something to be tolerated, instead of welcomed. When I was trying to EARN my license, everyone was all for it and cheering me on. Then when I EARNED it, it's like ... "Oh... you're just another no-coder..." I brought a friend into the hobby, and was proud of having done so. But I felt his discomfort as we sat in a radio club meeting and one of the VE's pointed to the two of us and referred to "people like those two" who were entering as tech and not upgrading. Please, don't ever do that to anybody. As much as I respected the VE, I carefully spoke up and told him: 2 Meter FM and packet is what I wanted to do from the start. And it does what I want to do, which is why (aside from finances) I have not pursued upgrades.

New licensees need to respect those who've gone before, and I think that part of this attitude we suffer is a result of the arrogant few on BOTH sides. Likewise, the older members need to realize that techs didn't find their license in a box of Cracker Jax. They had to study the theory and learn it to -EARN- the license by the standardized test that the hobby requires of everyone.

I'm studying code now, but mainly only because I promised my VE's that I would eventually do so. And that locally VHF packet really stinks. Only two sources, and at present both of those are off the air for repairs. And have been for weeks.

Publicity is essential. When I tell people I don't know (and some that I do) that I'm into amateur radio, they are clueless as to what I mean. So we discuss it some while, and it's "Oh, like you mean walkie-talkies and that stuff..." and when you bring up that it requires a federal license to use it, the interest usually drops off -very- fast. So we need to find a "carrot" that makes it more interesting and worth the pursuit. But frankly, I don't know what it is at present.

i have for sale an ASTRON RS-70M power supply.
it does about 57 amps continuious.
in great shape.

asking $235.00

also I have for sale a IBM Model P350.
it's contents are as listed: 3.2 gig hard drive, 64 mb EDO ram, S3 video,
18X cdrom, 3.5 floppy, 1serial, 1 parallel, 2 USB ports, Mouse, keyboard,
Manuals, software, just about 1 yr old. it's in mint shape cosmetically, and
runs like the day it was built by IBM, (sorry monitor not included)

$650.00
please reply via email, TNX

For Sale - Best Offer (plus shipping)

2 meter transceiver, Alinco DR1200, manual, no microphone.
Was used for a packet BBS, so it was purchased without
the microphone. However, a new mike would only cost about
$30.

Asking Price: $145

Um, wrong. I ordered the mic from HRO in Denver just 2 months ago, and it
was $50.00. AES, and several others were all the same price.

You are correct in regard to HRO which has an EMS-11 for around $50.
However, I've seen several compatible new mikes at swap meets for
around $30.

radio.packet,rec.radio.amateur.packet

The skytel skywriter 2000 pager is a nice little unit which runs it's
own OS and allows developers
to create apps to run on it. It includes a small multi-line display and
fairly usable small keyboard all
in a compact unit. While attending an IETF conference recently Motorola
loaned attendees these
units for the week and I had a chance to try one.

I was wondering if anyone else had thought about or looked into
modifying these units to work with
packet? Seems llike the perfect little unit! The units can be purchased

for around $300 and if they could
be modified to operate on Ham frequencies surely software could be
written to handle packet.. From there
I can think of all sorts of interesting apps such as display of simple
APRS maps, DX cluster alerts with
greater urgency if the region of the world you were interested in
started showing up a lot, perhaps even contest logging. How about
sending quick notes directly between two units while at a Ham Fest.

I was curious about this pager generally so I have sent for a free
developers kit (also part of the conference promotion) This will give me
software answers. Anyone willing to try to open one up to see about the
frequency issues?

You will have to do a whole bunch of work. The Pagewriter 2000 is
hardcoded to work with a ReFLEX50 or ReFLEX25 network. The Protocol
stack is hardcoded in masked microcontrollers. The RF transceiver
operates at 900 MHz, and will not translate down to 144 or 440 MHz

withoug extensive redesign. Have fun with the software developers kit,
there is a bunch of neat software that you can do on this.

For your info, I bought one 5 years ago, and it's the only radio among the
Maxtracs, Mitreks, and GE radios strong enough to have withstood 2 lightning
strikes. Fantastic packet radio.
If you like packet they're great for that. If you bought one for voice,
well you know.
Opinions are like your backside, everyone has one, and they all stink.
Better to keep them to yourself.

TO: Jeff Herman, don't bother. Ain't a sole listening to you.

Interested in putting up a node in the Southwest Wisconsin area. Looking to
buy a TNC that allows to work as a node. I heard that an MFJ model does
this. Need advise.

VERY NEW to the idea of putting up a node. Haven't determined if I want

to set up a PacketCluster or not. Regardless, I need to think about
purchasing a good TNC that does the job without mortgaging the house.

Advise is good. :-P

Hi Tod
             If you fancy building your own TNC we do a complete kit
or just the PCB and it will run any Node software and we will even
program the eproms for you which is a free service. just visit our Web
page for details or email me

Daniel, check out the Atlanta area APRS web site at: www.BSRG.org/
They have some links to click on their APRS page and other APRS sites,
plus there should be a name or two in there that you could send mail to
for contact in the Atlanta area. I didn't see any listings for TNC
settings, but when you run one of the APRS programs, whether it be for
DOS or Windows, the program will send parameters to the TNC to have it
accept/recognize data coming in.

Good luck, I think you'll enjoy messing around with APRS.

Right now, I'm battling a situation involving a Sharp Zaurus ZR-5000. I'm
desperately wanting to use the terminal feature for packet. I have a PK-3
as a TNC, but for some reason they're not communicating.

Do you have any information that would be useful for me to successfully link the two? If so, GREAT! If not, do you know where I can turn? Any help would be most appreciated!

I'm wanting to create a mobile computer for work with packet in severe weather for storm spotting and emergency situations. Thus, the need for me to find a solution is important.

TU es 73!

Hi Tod,
You don't say if the Node is to be stand alone ie. at a high/remote point, so hardware is probable approach or, say, at your house to put a path in a system in your area. In this latter case one might utilise more of a software approach and do more things with it. In either case a TAPR TNC-2 (usually clone of same) is probably the best bet, in simple terms. These include MFJ-1270b or c, PACComm Tiny/Micro 2 (Micro no longer made), and others. In the stand alone configuration you may remove the EPROM that holds the TNC's "Firmware" which tells it what it is(a TNC) and now gives it the new 'brain'/identity of being a Node. These Nodes of 'NETROM'/TheNet (plus) variants provide for a flexible network where nodes broadcast info to other nodes. While the Kantronics TNCs or MMI(multi mode interfaces) [I own a KAM/En] have the KA-Node(Kantronics node) feature and it will work as a node which is better than a digipeater, it will not appear as a node in the aforementioned network.

You have to identify your desires/'needs' for an 'optimal' acquistion. If you want to experiment, learn and build on that then you only have to get

close. Of course after a while you may have 3 or 4 TNC/MMIs like myself<g>.

Simply, if you want to have it around, take it out portable, use it for a mail drop, fill in a propogation gap, in other words do as much as you can with one box, on V/UHF you'd probably do well with a beast such as the Kantronics KPC-3 or the 9612(which is 9600 and 1200 baud).

If it's to be part of network, 'remote', single purpose...stick with the Tiny 2 or MFJ-1270b or c. Oh, yeah, I guess the AEA PK80 would work.

Their both affordable, available, often used. Some of these kits may be a good buy if you are at a stage where you can complete it and set it up. If you have the social/technical support in the area it might be an idea.

If you have this available, you might check out what exists for nodes/networks/switches/bbs etc. It may seem like fun to put a node on a frequency by itself and in some instances it can fufill a specific 'need', certainly experimentation, however it can end up being just that. A node on a frequency by itself.

Good luck, read(lots of good back articles, newletters, books), listen, ask around for info. Then start off somewhere, ask carefully considered questions(it is a learning experience) and have fun.
If you need more out of area help feel free to e-mail.

73, John

I need a manual for a Kenwood TM-3530A. I would be happy with even a
photocopy of the manual. If you can help please let me know what the cost
will be and any other terms you have. Thanks in advance.

Am attempting to set up a BBS network for my county. My goal is to establish about 6 BBS stations running 5w or less on 2mtr running a back-bone on 440. Have been looking for some good software but have not really found mush information on what hardware modifications the various software would require to fit my applications. Need stations to fill the following needs:

stand alone BBS sites-These are just a storage site for forwarded messages and would prefer they run under DOS. Each would have a 2mtr port and 440 port.

Interface BBS sites-These would serve the same function but would also link the local BBS network to existing packet BBS sites and handle message forwarding to the rest of the world. One of these sites will be connected to a network and would need to be able to interact with the network. Would like these stations to run under DOS and do have a copy of NOVEL DOS for the network station.

Mobile network BBS-This station will be in an emergency communications vehicle and will be connected to a network including Red Cross systems. As I believe that all of the local Red Cross computer systems are running WIN 95, this station would most likely also have to run under WIN 95.

Would also like to find terminal software that runs under WIN 95 that will interact with the Red Cross systems. This will allow the Red Cross operators to compose their own messages for HQ that can be reviewed by the ham operator for forwarding.

If anyone has any information that may help me, please send me the information either direct or through the group.

Mel Vance

Kenwood TR-7850 2 Meter Mobile rig for sale:
    - 15 memory channels
    - Priority channel (one button access)
    - Priority channel alert scan
    - Memory scan
    - DTMF pad
    - 7" W x 2.5" H x 9" D
    - 45 watt high power (about 5 on low)
    - original manual, hand-mic, mount and box.
This rig also has the "standard" type of functions,
one VFO (separate from memories), reverse button,
bargraph S and power meter...
would also make a good packet radio base station.
It is in excellent shape, very clean. $160
plus $5 shipping.

  It is dying in my area too, although APRS activity is UP!
Some of the problem is the Internet, it's faster but to me packet is FUN. Try
getting on APRS, 145.790. Monitor the freq for activity, there should
be some. Software links for APRS can be found at my web site.
A KPC3plus is around $120 by the way or you could get a used KPC3 for cheaper.

Hello Tom,

Yes it's disturbing how amateur packet radio is tearing itself apart, most disinterest by hams these days is due to all the ego-driven in-fighting and power mongering. I see it down here in VK , our local VK network is

shrinking and people (users) turning away, not because it's slow, but because of all the politics and **hate**. I read the never-ending posts here featuring the usual cast all name-calling , and spitting on each-other, not a pretty advert for packet I don't think. Our network is choked not with useful technical & dx bulletins but similar vitriol of the same internecine kind, I don't blame guys for not spending $300 on a TNC so they can read "trash". Packet *MUST* serve a *purpose* for it to survive, how fast it is of secondary importance.

Being able to forward "mega-bytes" of mail via packet (or amprnet) is only worthwhile if it's of value to somebody, and I hate to say it... but it's mostly rubbish.

Tell me about this APRS stuff Tom, what's that all about ?

By the way you comment that to you packet is <"FUN"> , well that is something that most of the prize-fighters seem to have forgotten....
we all just do it for the **** FUN **** don't we ??

73 & Happy Packeteering

As a former very active digital ham on HF rtty/pactor and on VHF packet, it has even surprised me how little interest I have in any of the current technology.Years ago I tried to promote high speed local networks realizing how fast the technology was going to eclipse amateur radio if we didn't get moving. But there was not enough interest to even begin to reach critical mass in our area. You have to have that in order for this to succeed.

Also, there was extreme fanaticism on the part of only a few key people who greatly opposed the connection of amateur radio networks to the internet. They simply did not care that the current network was no longer useable for message handling with delays of as much as a week (sometimes never) destinating a message. Now we get upset if it takes more than 5 mins to anywhere in the world. The BBS ops seemed to me to be the most opposed to this since they somehow thought they would loose power.

I think I am being honest when I state that as a group the BBS ops often have an intense ego which is why they are willing to invest so much money and time into their sphere of influence. But it sadly colors their judgement, in my opinion, and makes it difficult for them to see the big picture and the long term effect which they are now seeing as a result.

Amateur radio should have been able to have reasonably high speed local links and a reliable mail system as the minimum since our technology would meld so well with the internet technology and yet do something that most people still can't do and won't for some time (wireless access).

But sadly, it is not going to happen.

That's a lie. If you objectively look at the message base of any packet
BBS, you will find that information bulletins and sale/want postings make up
the bulk of the traffic there. By a wide margin.

Only the socially retarded would suggest that discussion of issues be halted
or limited because the participants disagree with each other and differing
opinions freely circulate.
Usually it's a LandLine Lid who you will find trying to limit other ham's
ability to freely debate and discuss issues related to packet radio. Most of
them strike me as low-rent pocket nazis who would just LOVE to be able to
limit everyone else's activities. They couldn't be more obvious if they had
JERK stencilled across their foreheads.

I don't think you are stupid enough to really believe your own lies.. I
think you "stretched things" in order to support a weak point. You lied in
order to support your negativity. A proud moment for amateur radio, I'm
sure.

 >I don't blame guys for not spending $300 on a TNC so they can read

>"trash". Packet *MUST* serve a *purpose* for it to survive, how fast it is

And there is the negativity you were so dishonestly leading up to.

>

Oh, that explains it. You're another "Amateur Telephone" advocate. By the way, amprnet doesn't move megabytes of anything, as you know. The Internet and other non-ham links you must utilize in order to prop up your essentially non-ham software and "networking" philosophy is NOT amateur radio, or even amprnet.

I give credit - when it's due. Amprnet does not exist on anything than a very limited, localized scale. There is no global amprnet, or even national amprnet. Why pretend otherwise? Amateur tcp/ip is a parasite which would quickly wither and die if it could not feed off of other, more legitimate networks such as Amateur Packet Radio and the Internet. In return for the blood amateur tcp/ip sucks, they return - nothing. Absolutely nothing is offered to those networks in return.

It doesn't have to be that way, of course, but it is.

Hello,

I always wondered why the BBS sysops spend so much resources to keep a BBS operational. In my experiance it hasn't been the BBS operators ego's that hinder the improvement of the local networks. I found it to be the rufusal of the end users to invest into the infastructure. When those of us who would like to improve the sytem approach the other packet op's for a little assistance. More likely than not the reply is, if the bbses didn't carry x,y,z(enter your most hated bulletin subject matter) bulletins, the system would have plenty capacity.

LandLine Lid Rick Williams wrote in message
<01bd193a$c40fa880$98a182d1@rwilliam>...

I have pointed out some of the more common behavioral quirks common to
LandLine Lids before, but this one here fits the stereotype SO WELL that I'm
considering giving his posting immortality, making Rick the "LandLine Lid
poster boy" for an article I'm currently working on.

Check it out!

>As a former very active digital ham on HF rtty/pactor and on VHF packet, it
>has even surprised me how little interest I have in any of the current
>technology.

No longer really a participant in amateur packet radio, but feels qualified
to complain.

Packet radio is not "high tech" enough for him. Only the telephone can
satisfy him (as a ham??).

>Years ago I tried to promote high speed local networks
>realizing how fast the technology was going to eclipse amateur radio if we
>didn't get moving.

3. Tells us what he USED to do.

4. Concerned that technology would leave packert radio behind, despite the fact that packet radio NEVER WAS ahead of the current technology.

>But there was not enough interest to even begin to reach
>critical mass in our area. You have to have that in order for this to
>succeed.

5. Realizes that almost nobody in his area wanted or liked tcp/ip, but didn't get the hint.

>Also, there was extreme fanaticism on the part of only a few key people who
>greatly opposed the connection of amateur radio networks to the internet.

Those pesky Ham Radio Operators, and their silly insistence upon using Radios!

>They simply did not care that the current network was no longer useable for
>message handling with delays of as much as a week (sometimes never)
>destinating a message. Now we get upset if it takes more than 5 mins to
>anywhere in the world.

Rick says the Ham Radio digital net is too slow. His way to advance our amateur radio technology ? Use the phone.instead!

Like most LandLine Lids, Rick is a real "ham among hams", huh? A real innovator.

>The BBS ops seemed to me to be the most opposed to
>this since they somehow thought they would loose power.

Hey, where's all this "power" I'm supposed to be afraid to lose?

BBS SYSOPs oppose Amateur Telephone for the same reason that any sane ham would. - The telephone quite simply IS NOT amateur radio, and each time the telephone is used to route around the existing ham digital network, that network suffers.

Most rational hams understand that utilizing non-ham communication in preference to ham radio within our packet net can only damage that packet radio net.

Use radios, BOZO, and BBS SYSOPs (and other hams) will have no problem with what you are doing at all.

Your current behaviour (insisting upon using the telephone and "pretending" it is amateur radio) is a littl;e too ignorant and short-sighted for most hams to tolerate, particularly BBS SYSOPs who were (and are) instrumental in BUILDING that ham digital network.

Of course BBS SYSOPs feel a sense of responsibility. Too bad LandLine Lids don't.

>
>I think I am being honest when I state that as a group the BBS ops often
>have an intense ego which is why they are willing to invest so much money
>and time into their sphere of influence.

Let's see... You don't like the packet network, think it's too old and slow,
and really prefer to use the telephone anyway.... Now just what is it about
the ham digital BBS net that you are frustrated in doing? Destroying it?

Aw, I think I'm gonna cry!

And don't forget to criticize BBS SYSOPs for investing their time and money
into building the packet network.

Moron.

> But it sadly   >being hams<   colors their
>judgement, in my opinion, and makes it difficult for them to see the big
>picture and the long term effect which they are now seeing as a result.

Gee, if hams keep using radios, we could end up in real trouble! According
to poster boy Rick.

Rick thinks that over the long run, we'd all be better off (as hams) using
telephones.

>
>Amateur radio should have been able to have reasonably high speed local
>links and a reliable mail system as the minimum since our technology would
>meld so well with the internet technology and yet do something that most

Got news for you, BOZO. A member of my family is currently building a
wireless access net for a large communications carrier. Spread-spectrum,
56kbd, cellular with over 200 customers at this point.

Been there, done that. My relative, unlike you and your buddies who DREAM of
doing that sort of thing, understands that hams should have their own
network.

Why can't you?

>But sadly, it is not going to happen.

Haw Hawr! You said it, Bub!   Not with "Amateur Telephone", at any rate.

What should they offer? A continuation of what they are trying to replace? That would be futile. TCPIP would then fail, because TCPIP requires work, work that some are afraid of, and if given a alternative, will completely ignore for a simple plug and play BBS solution, if BBS services are available. That is not advancement, but a step backwards. TCPIP'ers realize the only way to advancement in a welfare system is to move the welfare to TCPIP welfare.

Hey Charles,

You're a nice guy aren't you! I would tentatively suggest that the
vitriolic comments in your messages are of the same sort of which
people complain in packet networks worldwide.
YES people have different views, but they should discuss them
RATIONALLY, SENSIBLY, and without taking things personally.

I queried the use of the UK packet 'network' by a couple of
individuals for their own slanging match using @GBR bulletins. In
reply, I got near 40 messages of support, and a rude message from
one of the supporters, in which he pointed out spelling mistakes
and called me a boring old f*rt. He obviously didn't know I'm 17!

Packet WILL die unless we keep up with technology. Who, after
experiencing 56k6 internet access can cope with 1200baud access
to a BBS? I run exclusively TCP/IP in a regional network with
likeminded friends here in SW England. We want to keep up with
technology as much as possible - the only things stopping us are
the 'not-true-amateur-radio' brigade, and those who think that
9600baud+ is still experimental!!

And after experiencing tcp/ip over packet, who want to go back to
BBS mail? Not I!

73! Duncan.

>What should they offer?

Network Resources. Radio links. Services. - All accomplished through use of
Amateur Radio. (For the sake of being relevant to an Amateur Radio digital
network.)

> A continuation of what they are trying to replace? That would be futile.

I agree.

TCPIP cannot provide global messaging via amateur radio, as the Ham digital
net does every day.

TCPIP cannot provide the above on a continental scale, or a national one, or
even a state-wide one unless your state is awfully darned tiny. It doesn't
do any of those things at ANY speed, using radios.

No competition there. No relevance to global amateur digital radio there.
You're entirely right, David.

>TCPIP would then fail, because TCPIP requires work, work that
>some are afraid of, and if given a alternative, will completely ignore for

a
>simple plug and play BBS solution, if BBS services are available.

Again, I can only agree. Amateur Radio TCPIP needs a LOT of work. Hard work that TCPIP users have shown no inclination whatsoever to do. That's why there is no Global, National, or even Regional amprnet. Just piddling local stuff. Fast, but extremely limited and isolated. Much ado about nothing, as far as being an amateur packet radio networking solution goes. It's a big world out there, and amateur TCPIP just can't hack it as a way to build a large-scale RF network to fit that world.

Rather than make a serious attempt to rise to the many challenges of amateur radio, the familiar telephone is resorted to instead...

>That is not advancement, but a step backwards.

You said it, brother! Please stop.

>TCPIP'ers realize the only way to advancement in a welfare system is to move the welfare to TCPIP welfare.

Hams consider the "welfare" of Amateur Radio in general, and their fellow hams in particular to be more important than TCPIP "welfare", BBS "welfare", or whatever. When TCPIP'ers realize THIS, they will be taking their first serious steps to achieving relevance within the amateur radio community, and thus being capable of making a worthwhile contribution.

Get with the program. Get your priorities straight. Then proceed. As a Ham.

Network resources are easily supplied when a protocol standard capable of
dealing with anything is used as the basis. Everyone's system gets along,
everyone is happy.

>
>

And why not? Simply because it isn't that widespread as a long distance
communications methodology or do you think TCPIP isn't capable? The widespread
use problem is slowly being corrected, and the capability question doesn't even
require an answer, everyone knows the protocol is capable, for you to imply it
isn't based on it non-proliferation for long distance links is reason based on
the wrong facts, and only faulty reasoning can result, as it clearly has.

> TCPIP cannot provide the above on a continental scale, or a national one, or

Why not? I don't see why you are heaping TCPIP in along with wirelines. TCPIP
was never meant to only be a wired service, contrary to what you may believe.
Get your facts straight, and then come back and talk to me.

> Again, I can only agree. Amateur Radio TCPIP needs a LOT of work. Hard work

Its been the Phil Karn's of radio land that HAVE written software, that HAVE designed systems. I don't think you realize the very people who you insult have been the very people who contributed the most work. Where is your logic?

As to your faulty hypothesis that TCPIP can't be used to build a world wide net, I say you are wrong again. Where is your basis? And even worse, when TCPIP really begins to take hold in those high speed foreign networks and starts to spread here, I guess you will be out in your war paint against that, too, right? Seems statistically viable given your current unreasoned stance on the matter at hand.

> Rather than make a serious attempt to rise to the many challenges of amateur
> radio, the familiar telephone is resorted to instead...
>

And then you drop to a mere attack on those who choose to resolve themselves to using the telephone network to patch together amprnet, and further imply that all TCPIP'ers do the same thing. Do you have facts to prove this?

> >That is not advancement, but a step backwards.
>
> You said it, brother! Please stop.
>

The only thing that is a step backwards is your resolve to remove the possibility of TCPIP from amateur radio land like its some kind of disease, and doing so by mentioning just 1 or 2 networks that model what you call bad radio networking behaviour. I just don't get it, and I guess I never will. You have been given chance and chance again to give us these reasons, and yet you have failed each and everytime and have instead lowered yourself to hurling emotional diatribes about the social welfare of the HAM community.

> >TCPIP'ers realize the only way to advancement in a welfare system is to

>

Come on, quit trying to screw with our minds with that line. Sure most hams do have some sort of respect for each other, but for the most part, the people who paid the money like to call the shots, to heck with welfare for each other. Aren't you the one that said we have to work with the system we have? Well, TCPIP'ers attempt to. We are forced into a system that where might makes right or in this case the standard. After enough might is exerted, the old systems pass away, and everyone is forced to try new stuff, our stuff. While I do not endorse relying solely on telephone networks to patch together radio networks, it is just one group's means to an end to accomplish a transformation to a new protocol, at least thats how I perceive it. You have already told us you don't see it that way, so don't bother grinding it out again for us with your typical

name calling embedded here and there.

And if you actually were concerned about your fellow ham anyway, you'd understand not all of them like playing with your little BBSs, they like REAL networks. Don't confuse REAL network with a installed infrastructure. I realize that there is not a huge TCPIP infrastructure, but that doesn't restrict it from being a true network. BBSs have a huge infrastructure, but they are not true networks. The only shared resource that is worth using over long distance through a BBS "network" (joke, HAR!) is slow, unreliable email. So when it comes down to community service, its really not even reliable enough for that sort of use.

> Get with the program. Get your priorities straight. Then proceed. As a Ham.

I am a HAM. I've got my liscense to prove it. You see, the FCC determines whether I am a HAM or not, not Charles Brabham, thank goodness! Don't even bother telling me if I am a HAM or not. I know good and well who gives me that authority, and last I remember, it wasn't you. I have no respect for people who even would dare to make such comments, as if you define the HAM standard. I guess we will be taking the FCC endorsed Brabham Amatuer Service entry exam?

No doubt. They manage to complain about other sorts of comments as well. So? If I complain about your self-righteous attitude, does that mean that you should then be silenced? -- Or should you then be free to respond or not, as you please? Hmmmm? Think it through carefully.

I complain sometimes about "whiners".. You know.. - The ones who love to get up on their high-horse and pretend to be morally superior? Many of these tend to promote limited, moderated, and highly structured discussions, such as can be found at TAPR's SIGS. They must not like it too much though, since the TAPR SIGS are mainly dead.
Most of these advocates of limited discussion, naturally, tend to come from the losing end of the debate.

>YES people have different views, but they should discuss them
>RATIONALLY, SENSIBLY, and without taking things personally.

That sounds fine with me. Have you taken something said here personally? If so, the rational, sensible thing to do would be to avoid complaining about it, knowing that (by YOUR standards) your complaint has no relevance to this discussion.

Don't presume to tell me what I do or don't take personally. I doubt if anyone else will appreciate your opinion in that area either. Stick with things you have a clue about, and you'll go far.

Your self-important and unimaginative attitude probably fooled the individual. Also, it must be admitted that the great majority of outraged censoship advocates are, in fact, boring old f*rts. You fit the profile, and he made a pretty good call. The unusual thing about the situation is that your attitudes have drifted into such an awful rut at such an early age. Most guys save all that for when they get to the "doddering old fool" era, much later on in life.
What's your hurry?

>

>Packet WILL die unless we keep up with technology. Who, after
>experiencing 56k6 internet access can cope with 1200baud access

The ones who don't want to pony up for faster equipment, I suppose. (And that's just about everybody, sad to say.) I've had 9.6kb stuff available on my node/BBS system for over five years now, and have yet to see my first packet contact at 9.6kb. It's the same story with the local amprnet, so don't get on another high-horse about high-speed. In fact, there are many more high-speed links in my area associated with BBS forwarding and Network links than there are with TCPIP.

>I run exclusively TCP/IP in a regional network with
>likeminded friends here in SW England. We want to keep up with
>technology as much as possible - the only things stopping us are
>the 'not-true-amateur-radio' brigade, and those who think that
>9600baud+ is still experimental!!

I doubt that anything is "stopping" you at all. If what you have to offer is REALLY better, and not just better in fantasy-land, the great majority of hams will soon be using what you have to offer. If not....

I think that TCPIP has been pretty ineptly handled within the amateur radio community, but have nothing against TCPIP itself. I use it every day. It's great, ain't it?

>And after experiencing tcp/ip over packet, who want to go back to
>BBS mail?

Probably those hams who want to send and recieve E-mail and bulletins via digital amateur radio.

TCPIP cannot offer that. If you communicate with a distant ham via amprnet, the bulk of the distance covered will be via the Internet, not amateur radio. This applies to E-mail, conferences, and the moronic practice of "DXing" distant packet BBS stations via Internet links. None of these are amateur radio activities. The tail wags the dog.

Any clown can do E-mail via the Internet. Only a Ham can do it globally via amateur radio.

>Not I!

Sorry to hear that, OM, young man. Whatever.

I can never understand why people seem so obsessed with comparing packet
and the internet. Could you ever imagine a bunch of anglers (fishermen)
comparing the fun and challenge of catching a trout with buying a frozen
one from the supermarket?

Packet is part of amateur radio, as such it doesn't have to compete with
the internet - because the internet isn't part of amateur radio! If you
can't see that point, then I think you need to ask yourself what your
hobby really is.

>critical mass in our area. You have to have that in order for this to
>succeed.

This is indeed a big problem. As I see it packet has a number of annoying
problems:

1. To make packet work requires the cooperation of a large number of people to establish a packet network. Unfortunately, many people seem to have a stunted sense of cooperation.
2. It's slow. Abominably slow. Unnecessarily slow.
3. The Internet is faster, cheaper, and more acccessible.
4. Experimentation in software and protocols has essentially ceased.
5. Hardware is still expensive (why does my 56k baud modem cost less than my 1200 baud tnc?)

What can cure these ills?

1. I dunno how to increase cooperation among hams. Perhaps we just need to admit that building and administering large networks is costly and difficult, and find a different goal for packet radio.
2. We need a high speed reproducible design to bootstrap a new level of throughput for packet. This will likely also include a move to higher frequencies, such as 900mghz, or 10 ghz.
3. We can't compete with the Internet. Don't try. Figure out other cool things to do, such as APRS.
4. Encourage new software development and protocol development.

5. Try to leverage available hardware (such as the available
   Linux soundcard drivers) or make better use of new technologies
   to bring costs down.

>this since they somehow thought they would loose power.

It is a vicious cycle. The more often messages are dropped or lost, the
more futile it seems, and the more people drop out of packet. This
creates even more outtages, and so on and so on until nothing gets
through.

This whole "power" thing that BBS owners seem to go through is really
detrimental. Face it: you run a switch. It's no big deal.

Your right. Try APRS. It's growing VERY rapidly. Plus it's fun as well. Also try talking up packet. I do as much as possible. One draw (out of many) of APRS is that it's graphical. Tracking mobile stations, balloons (like the around the world balloon), NTS, weather, special events, etc. Lots of uses.

For most people the hobby is communicating with other people. This is
now possible even when people are far away from each other. Look at
the popularity of telephone chat lines, cellular phones, the internet,
CB and amateur radio (e.g. the all day long nets on 80 m). For these
people, they just pick case by case the most suitable medium. For
licensed radio amateurs to communicate with other licensed radio
amateurs, amateur radio is often the most suitable means of
communication. However, the same persons may still communicate with
each other with different means of communication (such as phone, fax
or internet) in different situations without feeling guilty. For them,
the communication is more important than the medium.

In amateur radio it is also possible to do a lot of experimentation,
such as experimenting with circuits, antennas, protocols (in the broad
sense) etc., but unfortunately only a small minority of licensed
amateurs are interested in these kind of activities.

If we are going to define amateur radio with a narrow, purist

attitude, there is not going to be much people left to maintain a
vivid community.

>communications methodology or do you think TCPIP isn't capable?

No, because the people who tend to be attracted to TCPIP are not capable. Look at what they've done in the last decade+ (nothing) while other hams went on to build a global network using protocols more suitable to amateur packet radio. Amateur TCPIP is a joke, OM, and the funniest part of all are the clowns who rave about "progress" but whose "contribution" appears to be limited to blowing hot air about amateur TCPIP services which hams have shown over and over to have absolutely no interest in (as part of amateur packet radio).

Whew! And they call that grammar? Try to calm down, OM. Most of us find that we can communicate better when our sentences make sense.

When you can craft a sentence which makes sense, come back and make another attempt to fault my reasoning. Maybe it will go over better on another try.

Poor David just can't see the connection between amateur TCPIP, and the practice of using the Internet or wirelines in preference to amateur radio.

Or he's not quite being honest and straightforward in this discussion.

Gee, I wonder which it is? Stupid or dishonest? Maybe both? On purpose?

have
>been the very people who contributed the most work. Where is your logic?

Phil Karn wrote NOS. Later he went on to promote "Amateur Telephone", the problem you wouldn't admit the existence of a few paragraphs back... Remember?

--
Phil Karn KA9Q (Author of NOS) in response to my statement on the tcp-group SIG concerning:

Subject: Re: 2300 MHz band reallocated

N5PVL:
Many *NOS stations are now set up for the single purpose of misusing Internet as a cheap, dumb way to avoid the use of radios. Internet message forwarders are the best known example of this.

We can't really afford that type of stupidity any more, IMHO.

KA9Q::
Why is this stupid? Many people outside ham radio would consider it more stupid to build a radio network that uses precious spectrum instead of using existing fiber facilities with much greater capacity and lower cost.

I feel that radio spectrum is too valuable to waste on point-to-point links that are better implemented with non-radio facilities.

Here Phil tells it as he sees it.. The global amateur radio digital network is a "waste of spectrum". He seems to share Greg Jone's belief that we would all be better off (as hams?) using the telephone, and sees nothing wrong with activities which tend to damage the existing network, such as Internet Forwarding is proven to do..

I can see where Phil would be interested in the opinions of those who are "outside of ham radio".. Sounds like that's where he's coming from himself!

Unfortunately, many Amateur TCP/IP enthusiasts have been exposed to Phil's thinking for years and mindlessly parrot variations on this line of propaganda at every opportunity. This is one of the main sources of the the present disdain for the packet radio network as expressed by many *NOS users.

*NOS users, by the way, are the folks who set up the Internet Forwarding gates which are currently destroying the amateur radio digital network by systematically "routing around" the existing radio links with the telephone. These same hams constantly disparage the packet BBS store 'n forward network, but insist on being a "part" of it for the sole purpose of destroying it from within.

My feeling is that if Phil Karn's followers do not like the packet radio network and want to do something different, there is certainly nothing wrong with them doing so.

This does not mean that it is acceptable for them to engage in activities designed to damage or destroy the packet radio network. One central tenet of amateur radio is that hams should avoid activities which will tend to lessen the enjoyment of other hams. Phil Karn's followers violate this rule of behaviour every day, as they attempt to dismantle and destroy the amateur packet radio network which was built through the cooperative efforts of countless hams around the world. This behaviour is simply not acceptable - Among hams.

If Amateur TCP/IP (NOS) can only work if the radio network is destroyed and replaced by telephone links, then as hams we can do just fine without TCP/IP.

>
>As to your faulty hypothesis that TCPIP can't be used to build a world wide net,
>I say you are wrong again.

Ok, where's your global RF net? You've had the same amount of time the real hams had. Where is it?

 >Where is your basis?

See the above.

>And even worse, when TCPIP
>really begins to take hold in those high speed foreign networks and starts to
>spread here, I guess you will be out in your war paint against that, too, right?

That's a big IF. Don't hold your breath, pardner.

>possibility of TCPIP from amateur radio land like its some kind of disease,
and
>doing so by mentioning just 1 or 2 networks that model what you call bad
radio
>networking behaviour.

I have never suggested that TCPIP be removed from radio land, as you put it.
I've said we could do without it on many occasions, though, and I'll
probably mention that fact a few more times.

TCPIP has potential for local nets, but has proven to be really useless for
long-haul stuff with radios. The central problem here, of course, is that
TCPIP really SUCKS unless you have a high-speed link. AND there is currently
no way to provide those high-speed links on a wide (national, global) scale
via Radio.

So we use what works instead. Sorry, but that's how it is OM.

> I just don't get it, and I guess I never will.

Many of us noticed that some time ago.

>You have
>been given chance and chance again to give us these reasons, and yet you
have
>failed each and everytime and have instead lowered yourself to hurling
emotional
>diatribes about the social welfare of the HAM community.

"Reasons"? You tell me I've been given "chance after chance", and again your poor grammar makes it hard to follow your alleged train of thought. A good idea, right before that sentence, would have been to give a clue about what "reasons" you are blathering about.

Yes, I know that you hate to be reminded of the fact that you are not the world's only ham, and that all those other hams are just as important as you are. I know it bothers you be reminded that you have a responsibility to those other hams, and that yes, your behaviour DOES matter. When I mention these things, I'm sure that YOU feel quite emotional, but in my case I'm just pointing out a simple fact.

>> >TCPIP'ers realize the only way to advancement in a welfare system is to
>> move the welfare to TCPIP welfare.
>>
>> Hams consider the "welfare" of Amateur Radio in general, and their fellow
>> hams in particular to be more important than TCPIP "welfare", BBS
"welfare",
>> or whatever. When TCPIP'ers realize THIS, they will be taking their first
>> serious steps to achieving relevance within the amateur radio community,
and
>> thus being capable of making a worthwhile contribution.
>>
>
>Come on, quit trying to screw with our minds with that line. Sure most hams
do
>have some sort of respect for each other, but for the most part, the people
who
>paid the money like to call the shots, to heck with welfare for each other.

In the TCPIP community, perhaps. The amateur radio community has a long-standing tradition of fellowship, decency and courtesy which appears to have been too socially advanced for you and many of your TCPIP peers to comprehend. In the past, most hams were generally civilized and had no trouble understanding and living with these concepts. - That was before the bitter negativity and moronic insistence upon non-cooperation we as hams have had to endure from the isolated, insulated amateur TCPIP community.

>Aren't you the one that said we have to work with the system we have? Well,
>TCPIP'ers attempt to.

That's a rather poor, obvious lie. You're starting to look almost as incoherent as Steve Sampson.

>We are forced into a system that where might makes right
>or in this case the standard.

No, actually right makes right. --- Except to amateur TCPIP goons.

>After enough might is exerted, the old systems
>pass away, and everyone is forced to try new stuff, our stuff.

Oh, I'm scared!

>While I do not
>endorse relying solely on telephone networks to patch together radio networks,
>it is just one group's means to an end to accomplish a transformation to a new
>protocol, at least thats how I perceive it.

Poor sod. I wouldn't admit it if I were that stupid. Well, if I were really that stupid, maybe I would.

Do you know what a Packet/Internet gateway is? Do you know what they do? Hmmm?

Quit pretending to be even more ignorant than you really are. Everybody sees what you're doing. Folks who are desperate because they are losing the debate often do that, and we're all familiar with it. Don't waste your (and our) time with any more of that stupidity, please. If you realize you have lost the debate, be a man about it, OK?

>You have already told us you don't
>see it that way, so don't bother grinding it out again for us with your typical
>name calling embedded here and there.
>
>And if you actually were concerned about your fellow ham anyway, you'd
>understand not all of them like playing with your little BBSs, they like REAL
>networks.

I'm quite happy to see the tiny minority who prefer amateur TCPIP play with it all they wish. -- As long as they "Play well with others"... That means no "Amateur Telephone", no "Internet Forwarding", and none of the other non-ham garbage which appears to be firmly embedded into amateur TCPIP.

>Don't confuse REAL network with a installed infrastructure. I realize
>that there is not a huge TCPIP infrastructure, but that doesn't restrict it from
>being a true network.

Who cares? It has so little functionality (as an amateur radio net) that effectively it does not exist.

Hams tend to prefer things that work. Today.

> BBSs have a huge infrastructure, but they are not true
>networks. The only shared resource that is worth using over long distance
>through a BBS "network" (joke, HAR!) is slow, unreliable email.

When amateur TCPIP can move ANYTHING at ANY SPEED across the globe using radio, you will then be in a position to criticize the BBS net. So far the score for global RF messaging is :

BBS net: Slow but improving
TCPIP: Nothing

>So when it comes
>down to community service, its really not even reliable enough for that
sort of
>use.

Yeah, right, BOZO. Tell that to the folks who had their lives saved last
week in Waco.

Of course, to be fair another score-card should be looked at, concerning
community service.

BBS net: Slow but improving
TCPIP   Nothing

>
>> Get with the program. Get your priorities straight. Then proceed. As a
Ham.
>
>I am a HAM. I've got my liscense to prove it. You see, the FCC determines
>whether I am a HAM or not, not Charles Brabham, thank goodness! Don't even
>bother telling me if I am a HAM or not. I know good and well who gives me
that
>authority, and last I remember, it wasn't you. I have no respect for people
who
>even would dare to make such comments, as if you define the HAM standard. I
>guess we will be taking the FCC endorsed Brabham Amatuer Service entry
exam?

Nope, but if you are too self-centered and ignorant to understand that you
DO have a responsibility to your fellow hams, there is only one "bad name"
for you which really fits...

Amateur TCPIP apologist!   That says it all.

This is not the "most people" list. Remember that Digital Amateur Radio is
the subject matter here, and you will find it much easier to make comments
which are relevant to the discussion.

>Look at
>the popularity of telephone chat lines, cellular phones, the internet,
>CB and amateur radio (e.g. the all day long nets on 80 m). For these
>people, they just pick case by case the most suitable medium.

That's exactly right.

When you want to do "amateur radio", you get a ham ticket, and then use
radio on the ham bands.

You don't do "amateur radio" with the telephone, CB, the Internet, or signal
flags, because (just in case it slipped by you somehow) none of those ARE
amateur radio.

>For
>licensed radio amateurs to communicate with other licensed radio
>amateurs, amateur radio is often the most suitable means of
>communication.

How clever! Did you stay up real late last night, thinking that one up?

>However, the same persons may still communicate with
>each other with different means of communication (such as phone, fax
>or internet) in different situations without feeling guilty.

Sure. Why not?

Most of us, however, are intelligent enough to differentiate between the different systems, and do not confuse one with another. For example, only a certified moron would utilize a CB or Internet connection and then go on to call what he just did "Amateur Radio".

Get it?

>For them,
>the communication is more important than the medium.

Yes, such people have made it plain, over and over again, that they could care less what damage they might be doing to any particular network with their moronic activities.
(Such as the obsession with moving data intended over one network over another one instead, irregardless of the many problems this inevitably brings on, the damage that follows, and the many people who ended up being inconvenienced.)

>In amateur radio it is also possible to do a lot of experimentation,
>such as experimenting with circuits, antennas, protocols (in the broad
>sense) etc., but unfortunately only a small minority of licensed
>amateurs are interested in these kind of activities.

Since when? You must hang out with a particularly inept and ignorant bunch of amateurs. Birds of a feather, I would suppose.

Let me guess -- You are involved in one of those isolated, insulated TCPIP LANS, aren't you? That would explain your mistaken perception of widespread ignorance and lack of "snap" within the amateur community.

To get a better idea what's really going on, try socializing with the "mainstream" hams a little more. - You will find that your little TCPIP LAN is really a drop in the bucket, and hardly something to judge all amateurs by. You are really being unfair, OM.

>If we are going to define amateur radio with a narrow, purist
>attitude, there is not going to be much people left to maintain a
>vivid community.

If we were all stupid enough to forget that it's called Amater Radio, and not "Amateur Telephone" or "Amateur Signal Flags" for a good reason, it may be possible for Ham Radio to die...
Fortunately, the great majority of amateur are intelligent, thoughtful individuals who are hip to the hacker mentality and the kind of destructive, thoughtless jerks who go with it. -- So the ACTUAL chances of amateur radio

dying are really pretty remote.

Don't worry, Paul. Hams will do just fine.

>For most people the hobby is communicating with other people.

No, the hobby of amateur radio is communicating with other people *using
radio*.

>If we are going to define amateur radio with a narrow, purist
>attitude, there is not going to be much people left to maintain a
>vivid community.

I don't think my definition is narrow. If you remove the use of radio
from amateur radio, then you have a different hobby!

To return to the comment to which I was replying - "Packet WILL die
unless we keep up with technology. Who, after experiencing 56k6 internet
access can cope with 1200baud access to a BBS?". Now lets try a few
variations on that. The same person could say:-

"Who, after experiencing the reliable, high quality phone service
offered by British Telecom can cope with SSB on HF amateur radio?"

Or how about -

"Who, after experiencing the high quality television service offered by
the BBC can cope with amateur TV?"

Etc...

There are few aspects of amateur radio which provide a quality of
service that can compare with commercial services. However, radio
amateurs continue to use SSB on HF and they continue to use ATV, because
it is amateur radio and because it offers an interest, a field for
experimentation, and a challenge. All I am saying is that packet must be
looked at in the same way - as *part of amateur radio*, not as some sort
of would-be commercial service that is supposed to be able to compete
with the internet.

I'm not saying don't develop the packet network, but what I am saying is
that in developing the network, we must not lose sight of the fact that

packet is *part of amateur radio*.

>
> Or he's not quite being honest and straightforward in this discussion.
>

I'm not being dishonest. Point out any fallacies I have proposed. Grapes has a strong INTRANET, you know, doesn't even rely on the Internet. The Internet just happens to be a useful appendage.

> Gee, I wonder which it is? Stupid or dishonest? Maybe both? On purpose?
>

Once again you, Charles Brabham, have gone to emotion-powered insults of the worse kind, first my intelligence and then my integrity. I would conclude from this sort of behaviour, that it would not be wise to actually slight you, instead of just presenting a logical arguement. You would probably snap and hurt people.

They are just doing things the way that is necessary to get it done. As I noted before, it has transformed you into a web page generating (which is decent except for diatribes on landlines) genius and net saliva source. Now we only need to get you to channel your anger in the direction of TCPIP. Those Slavs you continually comment on are using tcpip along with ax25.

> Among hams.
>

Perhaps they feel YOU are the one damaging HAM radio by confining it to power

hungry sysops, and their antiquated information distributions systems (note network was not a chosen word). Perceptions easily disguise themselves as truths.

I know what I perceive and what I think is truth. I perceive TCPIP and later variations to be the end all for networking for the general masses, a mass which I throw HAM radio operators into. If need be, based on facts, I am able to shift my perception, its just that I am currently using the internet to make this post, and cannot currently justify a shift to AX25 and BBS mail transfer systems as being the optimum global coverage that HAM radio needs, since it's failing and the internet is thriving, based almost solely on its protocol which allows diverse systems to be connected into one network.

> If Amateur TCP/IP (NOS) can only work if the radio network is destroyed and
> replaced by telephone links, then as hams we can do just fine without
> TCP/IP.
>
> Ok, where's your global RF net? You've had the same amount of time the real
> hams had. Where is it?
>

There you go with that old cliche, REAL HAMS. I charge you to reread the ending of my previous post about that.

Pertaining to your statement that I have had as much time as the "real hams", whatever that means to you, I will not be held accountable under your law, and if I were, you wouldn't be able to prove such accountability for the failures of others anyway. Check my liscensing date on the callsign database. The logic speaks for itself.

> >Where is your basis?
>
> See the above.
>

I didn't see anything above but emotion, no logic or reasoning, and you have proved the fact that Phil Karn is a protagonist that has prodded you into action via emotional stimulation. Nothing more. The HAM network has not become a vast web of fiber, as I've seen, but the BBS network IS beginning to collapse. TCPIP had nothing to with it. BBS's just don't cut it.

> I have never suggested that TCPIP be removed from radio land, as you put it.
> I've said we could do without it on many occasions, though, and I'll
> probably mention that fact a few more times.
>

Thank goodness you can at least admit it CAN have a place in radio. Your previous arguements did not lead me to this conclusion.

> TCPIP has potential for local nets, but has proven to be really useless for
> long-haul stuff with radios. The central problem here, of course, is that
> TCPIP really SUCKS unless you have a high-speed link. AND there is currently
> no way to provide those high-speed links on a wide (national, global) scale

> via Radio.
>

Not really. The entire internet exchanged alot of its data over 1200 and 2400 baud links in the early eighties. Its the beauty of packet switching that it is based on. Telephone companies haven't invested in band width as much as they have research into switching and data compression. There is alot to be squeezed from the long range links we have now.

> So we use what works instead. Sorry, but that's how it is OM.
>

What does OM mean? Is this a continuance of your derogatory name-calling of anyone who opposes your viewpoint, or is this simply a term for other HAMs?

> "Reasons"? You tell me I've been given "chance after chance", and again
> your poor grammar makes it hard to follow your alleged train of thought. A
> good idea, right before that sentence, would have been to give a clue about

>

My grammar is not poor, I just choose to use the largest wordings and phrases as possible, because the reader's response to it gives me a good picture of their emotional threshholds. I'd say, reread it if you do not understand it. I'd rather debate with you than grade your papers.

> Yes, I know that you hate to be reminded of the fact that you are not the

> just pointing out a simple fact.
>

I feel no emotion over the matter, except comfort, perhaps. I know I am not HAM #1 or HAM #80980980808098098 for that matter. I'm JUST A HAM. But a HAM I am, and as so, entitled to my own perceptions, opinions, and methodologies, as long as they are founded within the realm of FCC rules.

> In the TCPIP community, perhaps. The amateur radio community has a
> long-standing tradition of fellowship, decency and courtesy which appears to

>

If anything its the BBS sysops (if anyone from my area is reading, I will admit its not in your personalities for that sort of behaviour) that exhibit that sort of behavior. "My BBS or the road. Heck, don't even consider putting your own up! It would take away from MY bandwidth" attitudes have boiled from the BBS sysop's mouth for years.

> That's a rather poor, obvious lie. You're starting to look almost as
> incoherent as Steve Sampson.

If you can't even shove your way into the current system, then you are forced to establish and provide your own. Not a lie but sad fact that TCPIP'ers have had to live with.

The whole roadblock for TCPIP is summed up in the statement, "God may have created the world in 7 days, but He didn't have to deal with an installed user base." - PCM. The BBS ops have seized on the installed base as their ticket to maintaining their towers of control.

> >We are forced into a system that where might makes right
> >or in this case the standard.
>
> No, actually right makes right. --- Except to amateur TCPIP goons.
>

I stand by my comment. Prove your counter comment. Need proof for my arguement? The BBS system, need I say more? Now that the people who are actually spending money have to contend with that installed user base, even though the user base isn't the one investing any longer, they are fighting a uphill battle. They start resorting to desperate means.

> >After enough might is exerted, the old systems
> >pass away, and everyone is forced to try new stuff, our stuff.
>
> Oh, I'm scared!
>

You should be. BBS will die, regardless of the fact whether or not TCPIP does or does not. And you base your whole HAM world on it, so yes, fear should be an emotion that you give rise to when considering the possibilities.

> Poor sod. I wouldn't admit it if I were that stupid. Well, if I were really
> that stupid, maybe I would.
>

Is it that stupid? It has prodded you into reinvigorating amatuer packet, if in the totally wrong direction.

> Do you know what a Packet/Internet gateway is? Do you know what they do?
> Hmmm?
>

Actually, I bet you don't! You consider it a amprnet patch, plain and simple, but a gateway is a router, plain and simple, first of all, then a patch for packet forwarding. That is they route packets that pertain to addresses on the internet to the internet, and contain packets destined for machines in the radio intranet to the radio intranet. Tunneling is what you speak of. That is, using the internet to move packets from one intranet to another instead of radio links. I really hope my explanation didn't teach you anything new, or I would

suggest that you go read a networking manual. Check out Grapes. I can only assume that you feel that using a gateway simply implies using the internet to patch into amprnet. Thats plain goofy. Its biggest value, is that it opens up the data of the internet freely to those HAMS who want to use it.

> Quit pretending to be even more ignorant than you really are. Everybody sees
> what you're doing. Folks who are desperate because they are losing the
> debate often do that, and we're all familiar with it. Don't waste your (and
> our) time with any more of that stupidity, please. If you realize you have
> lost the debate, be a man about it, OK?
>

Thanks for taking an opposing viewpoint, calling my viewpoint stupid, and proclaiming yours superior. Debates are for reasoning, not declaring yourself superior. I even notice that you went even further and proclaimed your feelings as the feelings of everyone on the matter. You have won nothing, and I am not out to win, I am out to hold the ground between you and the total annihilation of modern technology and theory in a hobby that was once catered to the leading edge.

> I'm quite happy to see the tiny minority who prefer amateur TCPIP play with
> it all they wish. -- As long as they "Play well with others"... That means
> no "Amateur Telephone", no "Internet Forwarding", and none of the other
> non-ham garbage which appears to be firmly embedded into amateur TCPIP.
>

Good, but no one in my area is offended by the use of or work required for TCPIP. I have been checking into this, and I have not received any opposing arguements in my mailbox or on my 2m ragchews, yet. I guess I am just a "maverick" tcpip'er and am actually nice to my fellow hams as they are to me, because I choose to be, not because you obligate me to be. I have a very strong feeling you are speaking from your hat and not fact when you claim TCPIP'ers are just generally radio burning, fiber optic using nazi's.

Also, why should it bother you then if other hams do use internet tunneling? You don't use TCPIP so it doesn't affect your radio habits one way or the other. It is in actuality a designers implementation issue, and a matter of personal descision that is typically based on cost, not yours or any other wanna-be's authority. I think it would be more impressive to have radio links, but the installed base who contributes nothing, is happy tapping away at BBSs all day long.

> Hams tend to prefer things that work. Today.

I guess thats why the BBS system is going to pot, eh? Point gladly taken.

> When amateur TCPIP can move ANYTHING at ANY SPEED across the globe using
> radio, you will then be in a position to criticize the BBS net. So far the
> score for global RF messaging is :
>
> BBS net: Slow but improving
>

Improving? I need some facts, and just the facts . . .

> TCPIP: Nothing
>

Global RF networking is working in the commercial arena. That only proves to me that my fellow responsible HAMS like you declare yourself to be, or simply being lazy about it.

Check out those Europeans you bow to continuously, and you should bow, they are innovators. They are running TCPIP from island to island. Its us, the BBS'ers in America, that are preventing a global TCPIP network, not the difficulty of TCPIP itself.

> >So when it comes
> >down to community service, its really not even reliable enough for that
> sort of
> >use.
>
> Yeah, right, BOZO. Tell that to the folks who had their lives saved last
> week in Waco.
>

Please post some of those bulletins and crucial life saving messages that were sent across the packet BBS forwarding system. Also, please include its fartherest reaching destination and the date/time/location it was sent from and date/time/location that it arrived at. The destination does not actually have to be one of the crucial ones in the chain, I just want the fartherest.

> Of course, to be fair another score-card should be looked at, concerning
> community service.
>
> BBS net: Slow but improving
>

The dying BBS system is improving community service? Communities rarely use HAM service for anything, now that cell companies have discovered they get alot more customers if they show up with portable cell towers and tons of free cell phones at disaster sites. The biggest use non-HAMS have gotten out of a HAM operators has been to pass voice traffic on HF voice nets. MARS basically covers this for the military, and civilians have the internet, telephones, and cellphones. The few who use the voice message passing networks, simply find it "romantic".

> Nope, but if you are too self-centered and ignorant to understand that you
> DO have a responsibility to your fellow hams, there is only one "bad name"
> for you which really fits...

I do have a responsibility to my fellow HAMs, that is to not interfere with their communications. As long as a basic CDMA access scheme is employed this will not happen. By getting my ticket, I in no way obligated myself to providing the majority with whatever services it wanted. That is my choice. Once again, I beg you to stay with facts, not emotion. Whether I currently am preparing a system or not (I am) actually has no bearing whatsoever on respect and

responsibility.

> Amateur TCPIP apologist!   That says it all.
>

I thought I stated before, I apologize for nothing in the amateur realm for I offend no one, because I am responsible and do not interfere with others.

However, you should act your age and attempt to apologize for the continual name calling you inflict on YOUR fellow HAMS.

> 73 DE Charles, N5PVL @ N5PVL.#NTX.TX.USA.NOAM
> http://www.texoma.net/~n5pvl

Name's Charles has called Dave in this post:

1)sod
2)TCPIP apologist
3)BOZO

Character attributes assigned by Charles to Dave during a debate between what I thought were logical people:

1) Ignorant
2) Stupid
3) Dishonest
4) Grammar impaired

You, Charles, need to learn about debate, not name calling and hasty character assessment.Pearcedlpearce@eos.ncsu.edu

In article <WLYGcSABvWs0EwKd@peaksys.demon.co.uk>, Roger
Barker <roger@peaksys.demon.co.uk> writes
>Packet is part of amateur radio, as such it doesn't have to compete with
>the internet - because the internet isn't part of amateur radio! If you
>can't see that point, then I think you need to ask yourself what your
>hobby really is.
>

Hi Roger,
I'm concerned about the future of the hobby - too many people say
the Internet is easier (no exam) and with far more to offer than
amateur radio, in terms or communication. In order to maintain
amateur radio as a technological hobby, rather than letting it
degenerate into a historical subject, we need to keep up with
technology rather step on the brake.

To Charles,
The reason we don't have a worldwide tcp/ip network yet is
because of inavailability of resources. Even ordinary AX.25 doesn't
have a worldwide network for users, only mail forwarding links.
How do you suggest we span the Atlantic using RF? Either HF (no
chance) or by satellite (who's paying?)

As a general note, I'm perfectly sure everyone would prefer it if
people didn't get personal and start name-calling - it doesn't help
and makes us look bad.
Please correct me if I'm wrong?

73! Duncan G7VQF.
TCP/IP is great, it IS true Amateur Radio, and it does work. Very well!!

>> No, because the people who tend to be attracted to TCPIP are not capable.
>>snip<<
>
>I wouldn't say that, look at grapes. They have an intranet AND use the
internet.
>Would you deem that a failure, hmmh, I wouldn't.

Remember, I'm looking at it from the viewpoint of digital amateur radio.
They could probably lose the Internet links if they were doing so well with
radios.. Why don't they? To communicate with distant hams, huh? How about
not-so-distant hams?
I'll be impressed when I see them use radios, and PARTICIPATE in the
mainstream of amateur packet radio. As long as they run an isolated,
insulated RF net, the value of their work (as hams) will be limited to that
local scale. It's a big world out there, with lots of other hams. If I had
to use a wireline or Internet link to talk to my fellow hams, I'd be
embarassed. It's not an achievement, or a temporary political move to
destroy the eveil power-mongering BBS SYSOPS... It's just plain
incompetence. The TCPIP goons insist on those wireline and Internet links
because otherwise amateur TCPIP would flop fast, in a big way. - That's all
I have to know, when judging amateur TCPIP's utility for large-scale digital
ham radio networking.

There are most certainly plenty of technically gifted folks who are
interested in TCPIP. I was speaking in a wider, more general sense. Remember
that having a technical gift does not automatically mean that you've got any
common sense.

>> Poor David just can't see the connection between amateur TCPIP, and the

I respond to logical arguement with logical aurguement, if that's what you were trying to say there. The last person I offered to "snap and hurt" had just gotten through threatening my family. I didn't have to say anything to "snap and hurt" the guy... I just stood there and waited for him to move. He did, but the other direction and so nobody was hurt.

You insulted your own intelligence and integrity through your remarks, OM... I only held up a mirror to your own stuff, and you didn't like what you saw, did you?

>It makes you mad doesn't it?

It's enough to make any ham mad.

I've always had a problem tolerating ignorance, and popular ignorance is
particularly disgusting.

>You are a emotionally motivated individual.

So? Who isn't?

> I think
>his comments are a wisely crafted motivational comment for those have
>emotionally opposed high speed world wide links for so long.

No, it's a narrow, provincial viewpoint given much wider acceptance than it
deserves.

>It has spurned you to put a web page

Nope.. I put up a web page because I get as free one with my account, and
didn't mind learning enough about web publishing to do so.

>and exhibit ill behaviour.

And you would call indifference to your fellow hams "good behaviour", I
suppose?

How about the hostile "takeover" of packet by TCPIP goons you outlined
earlier. Is that "good behaviour"?

I pointed these things out. Nasty of me, wasn't it?

> I'd say his comments were "good".

But not "good" for amateur radio. Glad you've finally shown your colors.

>> I can see where Phil would be interested in the opinions of those who are
>> "outside of ham radio".. Sounds like that's where he's coming from
himself!
>>

statement
>of a man of an opposing view point alone.

Now you are pretending ignorance again. You're getting better all the time.

>> *NOS users, by the way, are the folks who set up the Internet Forwarding
>> gates which are currently destroying the amateur radio digital network by
>> systematically "routing around" the existing radio links with the
telephone.
>> These same hams constantly disparage the packet BBS store 'n forward
>> network, but insist on being a "part" of it for the sole purpose of
>> destroying it from within.

>They are just doing things the way that is necessary to get it done.

Get what done? The destruction of the global ham digital net? That's what
they are doing.

I suppose you find a sick sense of pride in apologizing for such actions.

>As I noted
>before, it has transformed you into a web page generating (which is decent
>except for diatribes on landlines) genius

Give me a break. My web page is most common. As I mentioned before, my
decision to learn about HTML was solely motivated by the fact that I had a
free page to play with. I've seen lots of better ones, done by guys who
actually knew what they were doing.

>and net saliva source. Now we only
>need to get you to channel your anger in the direction of TCPIP.

You always think I'm angry. You just don't appreciate my humour.

>Those Slavs you
>continually comment on are using tcpip along with ax25.

I comment on their equipment. Who wouldn't? It's nice! They could have opted
for the telephone too, but had too much class and self-respect for that.

>Perhaps they feel YOU are the one damaging HAM radio by confining it to
power
>hungry sysops, and their antiquated information distributions systems (note
>network was not a chosen word). Perceptions easily disguise themselves as
>truths.

I'm sorry, but I have never seen how all those BBS SYSOPs are supposed to be holding amateur TCPIP back, or what they could have possibly done to deserve the vendetta you outlined. ("Might makes Right", ect.)

The high-speed links you say that amateur TCPIP folks need all require use of bands the BBS net rarely if ever use. They literally are not a factor in the expansion of those high-speed LANS, for that simple reason. You're not going to squeeze 1MBPS out of 2meters, no matter how hard you try.
In other words, your negativity and adversarial outlook concerning the BBS net is entirely without rational justification.

There IS NO "competition" except the one manufactured by the stubborn refusal of amprnet to "play well with others". You manufactured an excuse for youselves, and a very poor one at that.

>I know what I perceive and what I think is truth. I perceive TCPIP and later
>variations to be the end all for networking for the general masses, a mass which
>I throw HAM radio operators into.

I'm embarassed for you. You have defined provincialism perfectly for us all.

> If need be, based on facts, I am able to shift
>my perception, its just that I am currently using the internet to make this
>post, and cannot currently justify a shift to AX25 and BBS mail transfer systems
>as being the optimum global coverage that HAM radio needs, since it's failing
>and the internet is thriving, based almost solely on its protocol which allows
>diverse systems to be connected into one network.

The telephone modem is that box which hooks up to your phone line. The TNC, on the other hand, hooks up to your radio. Once you have mastered the ability to differentiate between these two, you will be well on your way to understanding why the Internet is faster than the amateur radio digital network.
At this pinnacle of knowlege, you can then go on to an understanding of amateur radio, and why anyone in their right mind would use a slow RF link when the telephone was nearby. - Or you might discover that you are really not suited to be a ham, and should concentrate your efforts elsewhere.

>> Ok, where's your global RF net? You've had the same amount of time the real
>> hams had. Where is it?
>>
>> >Where is your basis?
>>
>> See the above.
>>
>

>I didn't see anything above but emotion, no logic or reasoning,

I thought it was reasonable to ask you where your global RF net was. You propose that amprnet can handle the needs of all of those hams who are currently utilizing the global ham digital network... OK, where's your global RF net?

There isn't one, is there? Now, don't you feel ashamed for claiming to be able to do things that amprnet simply cannot do? Admit it... Amprnet has only succeded in making an annoying parasite of itself, not a proud, independent amateur radio network like the global ham digital net.

If the ham digital net shut down tomorrow and left it to amprnet to allow hams to communicate via digital RF, you would be afraid to leave your house on account of all the angry hams.

Build yourself an RF network.. Then you can play with the big boys.

>and you have
>proved the fact that Phil Karn is a protagonist that has prodded you into action
>via emotional stimulation.

What's that supposed to mean? Do you know what the word "protagonist" means, and it's common useage?
By the way, just because I mention Phil doesn't mean he has "prodded" me into anything, any more than the smell of a dead rat "prods" me into looking for it and taking steps to eliminate the problem. It's not an emotional thing... I just don't like the smell.

>Nothing more. The HAM network has not become a vast
>web of fiber, as I've seen, but the BBS network IS beginning to collapse. TCPIP
>had nothing to with it. BBS's just don't cut it.

I won't mention your grammer again. It's unfair.

All of ham radio is sufferring from the constant attacks of negativity-peddlers such as yourself. As such, you are an embarassment to the hobby, as well as being a minor itrritation.

The packet net, like many other aspects of amateur radio, is set back, not dead. Don't hold your breath until it dies, pardner.

>> I have never suggested that TCPIP be removed from radio land, as you put it.
>> I've said we could do without it on many occasions, though, and I'll
>> probably mention that fact a few more times.
>
>Thank goodness you can at least admit it CAN have a place in radio. Your
>previous arguements did not lead me to this conclusion.

You seem to have trouble following at times. I'm disgusted at how amprnet

has been abused and stifled by a bunch of clueless jerks, and how it has been perverted into a political tool, an instrument for disrupting the work of other hams instead of attempting to cooperate and co-exist so that it can achieve relevance within the amateur radio community.

In a rational, cooperative environment (the ham world beyond amprnet) the TCPIP protocol has great potential. Under the present management it's not likely to go much further than it has in the previous decade. The Internet is quickly losing it's "magic", and is far along the way to being simply taken for granted like TV. Amprnet rode that wave, but it's crested now. Good try, but no bananna. You didn't make it during the Internet craze, you ain't gonna make it at all. (The so-called Might-Right Takover of the packet net's user base by amprnet.)

>> TCPIP has potential for local nets, but has proven to be really useless for
>> long-haul stuff with radios. The central problem here, of course, is that
>> TCPIP really SUCKS unless you have a high-speed link. AND there is currently
>> no way to provide those high-speed links on a wide (national, global) scale
>> via Radio.
>>
>
>Not really. The entire internet exchanged alot of its data over 1200 and 2400
>baud links in the early eighties. Its the beauty of packet switching that it is
>based on.

Acting stupid again, are we? See how far that line "walks" with your fellow TCPIP goons. Tell them that high-speed is not really needed. ;-)

>Telephone companies haven't invested in band width as much as they
>have research into switching and data compression. There is alot to be squeezed
>from the long range links we have now.

Amen.

>> So we use what works instead. Sorry, but that's how it is OM.
>
>What does OM mean? Is this a continuance of your derogatory name-calling of
>anyone who opposes your viewpoint, or is this simply a term for other HAMs?

It's a CW abbreviation many hams use, just as many Unix vets utilize those little sideways "faces". ;-) . It reads as "old man". No insult there unless you are sensitive about your age and misunderstand.

>My grammar is not poor, I just choose to use the largest wordings and phrases as
>possible, because the reader's response to it gives me a good picture of

their
>emotional threshholds.

Yeah right, Einstien. You betcha.   ;-D

>> Yes, I know that you hate to be reminded of the fact that you are not the
>> world's only ham, and that all those other hams are just as important as
you
>> are. I know it bothers you be reminded that you have a responsibility to
>> those other hams, and that yes, your behaviour DOES matter. When I
mention
>> these things, I'm sure that YOU feel quite emotional, but in my case I'm

>
>I feel no emotion over the matter, except comfort, perhaps. I know I am not
HAM
>#1 or HAM #80980980808098098 for that matter. I'm JUST A HAM. But a HAM I
am,
>and as so, entitled to my own perceptions, opinions, and methodologies, as
long
>as they are founded within the realm of FCC rules.

Yes, that is why you characterize such references as "emotional". Right?

>Come on, quit trying to screw with our minds with that line. Sure most hams
>do have some sort of respect for each other, but for the most part, the
people
>who paid the money like to call the shots, to heck with welfare for each
other.
>
>> In the TCPIP community, perhaps. The amateur radio community has a
>> long-standing tradition of fellowship, decency and courtesy which appears
to
>> have been too socially advanced for you and many of your TCPIP peers to
>> comprehend. In the past, most hams were generally civilized and had no
>> trouble understanding and living with these concepts. - That was before
the
>> bitter negativity and moronic insistence upon non-cooperation we as hams
>> have had to endure from the isolated, insulated amateur TCPIP community.
>>
>
>If anything its the BBS sysops (if anyone from my area is reading, I will
admit
>its not in your personalities for that sort of behaviour) that exhibit that
sort
>of behavior. "My BBS or the road. Heck, don't even consider putting your
own up!
>It would take away from MY bandwidth" attitudes have boiled from the BBS
sysop's
>mouth for years.

Not really. There are good reasons for not crowding several BBS's closely
together. Since you do not see the need to cooperate with others, I would be

willing to bet that you never bothered to ask for help or advice from any of those SYSOPS, and affected the snotty attitude you have displayed here.

I would tell you to buzz off, too. They did the right thing in keeping troublemakers off the net, if indeed their activities prevented you from using any of the available ham spectrum. (Which is what it would take to keep you off the air if you wanted to be there.)
I suspect that you discovered that your LandLine Lid stuff, and inability to see the need for cooperation wouldn't go over, and you then cried "sour grapes!".   ;-)

>If you can't even shove your way into the current system, then you are forced to
>establish and provide your own. Not a lie but sad fact that TCPIP'ers have had
>to live with.

Well, there IS another alternative.. It's called cooperation and participation. Look them up!

We are all eagerly awiting the completion of your global RF network. Good luck! (no kidding)

>The whole roadblock for TCPIP is summed up in the statement, "God may have
>created the world in 7 days, but He didn't have to deal with an installed user
>base." - PCM. The BBS ops have seized on the installed base as their ticket to
>maintaining their towers of control.

No, no... The BBS net created the existing user base. Nothing was "seized" back then, and nothing is going to be "seized" in the future. Hams are not faceless mannikins for amprnet to manipulate, OM. They do what they do because that's by gum what they WANT to do. Wise up. You're not going to force anything upon anybody.

You are welcome, of course, to try. Everybody plays the clown from time to time, and laughter is a good thing.

>> >We are forced into a system that where might makes right
>> >or in this case the standard.
>>
>> No, actually right makes right. --- Except to amateur TCPIP goons.
>>
>
>I stand by my comment.

Hey, look out!   You're standing in dog-poop!

Seriously though, your attitude is really ignorant and short-sighted. Go ahead and unsult the intelligence of hams some more.. Tell them about how you will force TCPIP upon them, like it or not.

You're almost as good a source of material on what's wrong with amprnet as good old Steve, and have probably alienated just as many hams from ever considering TCPIP as he has. You accuse me of doing these things, but I could never compete with you two. A "good" adversary is much more useful than a confederate. Dave, it comes straight from my heart when I say that you are really great.

>> >After enough might is exerted, the old systems
>> >pass away, and everyone is forced to try new stuff, our stuff.

That's the way, Dave! I can just hear those little pocket-nazi goose-steps now, as amateur packet radio is taken over by amprnet!   Haw Hawr!

You guys are a million laughs.

>Thanks for taking an opposing viewpoint, calling my viewpoint stupid, and
>proclaiming yours superior.

Well (blush) I do what I can...

>Debates are for reasoning, not declaring yourself superior.

Well, cut it out then!

>I even notice that you went even further and proclaimed your feelings
>as the feelings of everyone on the matter.

Nope, I said,

Quit pretending to be even more ignorant than you really are. Everybody sees what you're doing. Folks who are desperate because they are losing the debate often do that, and we're all familiar with it. Don't waste your (and our) time with any more of that stupidity, please. If you realize you have lost the debate, be a man about it, OK?

You're real big on that "I'm too stupid to know what you're talking about" stuff. I know it bores me to tears... I was just thinking of everyone's welfare, and hoping that you would stop denigrating yourself that way.

>You have won nothing, and I am not
>out to win, I am out to hold the ground between you and the total annihilation
>of modern technology and theory in a hobby that was once catered to the leading
>edge.

You should share these goals with a good therapist.

This is planet Earth, Dave. I'm a SYSOP from Texas, not some sort of paranoid fantasy. You know, a regular guy who picks his nose when he thinks nobody is looking. Wise up, OM. Go to Chill-Down city for a little while.

>> I'm quite happy to see the tiny minority who prefer amateur TCPIP play

They use radio to access those BBS's.. Why should hams contribute to folks
who are hostile and stupid, and insist upon pretending that the telephone is
amateur radio??

The great majority of hams have too much class to be associated with such a
pocket-nazi attitude, and steer far clear when they hear radical TCPIP
apologists such as yourself.

Keep up the good work!

>
> It affects the entire amateur community.
>

The only ones you should police are those that forward AX25 and BBS messages, as if you could actually do anything about it. I wouldn't be caught dead doing it, as its a waste of my resources to deal with BBS messages, as you have time and time again pointed out, there is already a system for that. TCPIP'ers only fund high speed links and internet routers and software developement for TCPIP, not BBSs. I can only see one positive affect, if any affects for BBS systems, that you get the high speed radio research for free if you were to ever decide to kludge it into a BBS system, and I just can't see the negative impacts it could

possibly have on your BBS forwarding systems. Perhaps that is what you should elaborate on next.

Its illogical that for someone who doesn't care about TCPIP and what it can offer worries so much about what we do. If its so terrible and is going to fail, you shouldn't worry about it. I'd say, buzz off if I were to act as you normally do, but I'd rather you participate in a bright new future for packet, under the rule of the TCPIP protocol. Tinker with your 15 year old BBS system if you want to contribute to a dying breed... we've got work to do, as you so happily point out and that I am more than happy to agree with.

> Keep up the good work!

I will!

Charles Brabham wrote

>The telephone modem is that box which hooks up to your phone line. The TNC,
>on the other hand, hooks up to your radio.

Who gives a shit. You are talking about level 1. When are you going to graduate
to level 2 of the ISO chart?

I don't really give a shit what you do with your wires, what are you doing as a
Ham
to make packet radio fun? I haven't noticed your doing much of anything besides
plug and play, but you bitch about every Ham who ever got a paper published.

If you're so enspired, and all of us should follow, how come your name doesn't show up in any published articles on technology or operations?

It's easy to sit in your armchair and bitch about technical papers that were put together through a lot of work and time. It takes no work, it means nothing.

Instead of posting 4 page babble, why not spend the energy on a technical paper that could really be something of value. In the years you've spent on this newsgroup, you haven't done anything that really matters. It's like a dog barking.

Steve

Then can they be qualified as TCPIP folks? Maybe if you poke at them a
little, they will come alive.

> make it faster or more efficient. Just the opposite, most likely.

I'm not sure what comment this referred too . . . but TCPIP could be
alot more effecient if methods were used to increase the effective
packet size, and get rid of the long winded AX25 header. The house is
too small for the both of them, but a properly designed lowlevel
protocol could provide both compression and forward error correction,
allow larger packet sizes, and greatly increase effeciency at 1200 baud.

Volunteers can do it if they wanted. They set around and forward mail by
hand (at least some do) don't they? What if they instead spent that time
on network maintenance and upgrading? I realize it couldn't approach the
level of the current internet, but I expect you just might be impressed
with what could be done.

Not really (though I am not proposing internet tunneling) . . . as pertains to my solution, but none the less, a hybrid network still has radios. There is not much to be done over HF links, and the monetary investment required for multipath/multihop cross country feeds is prohibitive at high speeds. We could sap alot of bandwidth out of the system as it exists but in switched packet mode with intelligent routing and data compression. Mail and bulletins could be moved alot faster over such a system. I don't know of many that could deny that.

The BBS system has planted itself deeply. Eventually when its unrooted, it will be replaced. Change no matter how hard it is opposed, typically happens anyway. It will be sad to say however, instead of a smooth transition when the internet changed to TCPIP, we will have a virtual blackout that will fuel and uproar, since we fail to look forward.

Not you again, everything anyone says, except for Hank and Charles, is simply empty words and insults. Spare me ... I will however strike this from the record to finish replying to your post. I haven't insulted you or Charles, so get off that soapbox before it collapses.

>

> personal investment of time and money.

Its coming . . . well at least the intercedent between radio and
computer, specifically designed for TCPIP, only, though the software
will route packets via routes found in AX25 headers. I can't explain any
further at this time. It may end up a trade secret.

>
> I don't need GRAPES or ham radio to access the internet.

So, need and want are two totally different things. I got into HAM radio
cause I WANTED to play. Not because I needed to. Think about it . . .

>
> Another really ignorant generalization that's contrary to the facts.
> That "installed base" did the work that made it an installed base.
> Now you want to whine when they use it as it was designed. Feh!

Now its implanted and can't be moved over for better. Thats real good,
isn't it?

I'm not sure whether or not it is a good idea to continue this
conversation or not with Charles, but you are, for the most part,
reasonable. An admirable trait.

>network was not a chosen word). Perceptions easily disguise themselves as
>truths.

BBS sysops and node sysops are humans. They're no more or less
arrogant than any other class of people. Most of the node ops I've
seen have been willing to allow the small minority of TCP advocates to
use (and abuse) their facilities. What have the TCP folks done in
return? Nothing, at least in this area.

>my perception, its just that I am currently using the internet to make this

That's the silliest thing I've ever heard. The advantages of the
internet over AX-25 have little or nothing to do with the underlying
protocols involved. Changing the radio net to pure TCP/IP will hardly
make it faster or more efficient. Just the opposite, most likely.

>> Ok, where's your global RF net? You've had the same amount of time the real
>> hams had. Where is it?
>>
>
>There you go with that old cliche, REAL HAMS. I charge you to reread the ending

Where is the global net? That was the question. While you're at it,
where are the regional nets? Where can I connect BY RADIO to an
Amateur TCP/IP net locally?

>via emotional stimulation. Nothing more. The HAM network has not become a vast
>web of fiber, as I've seen, but the BBS network IS beginning to collapse. TCPIP
>had nothing to with it. BBS's just don't cut it.

OK, BBSs don't cut it. Where's my alternative?

>Not really. The entire internet exchanged alot of its data over 1200 and 2400
>baud links in the early eighties. Its the beauty of packet switching that it is
>based on.

Oh, crap. If you can't see the difference in a net based on a massive
telephone system build and maintained by a COMMERCIAL industry which
has been around for nearly a century, and a net built and maintained
by VOLUNTEERS over RADIO for less than 20 years, then you have no
business in this discussion.

>> So we use what works instead. Sorry, but that's how it is OM.
>>
>
>What does OM mean? Is this a continuance of your derogatory name-calling of
>anyone who opposes your viewpoint, or is this simply a term for other HAMs?

You call yourself a ham and you don't know what "OM" means? The mind
boggles.

>If anything its the BBS sysops (if anyone from my area is reading, I will admit
>its not in your personalities for that sort of behaviour) that exhibit that sort
>of behavior. "My BBS or the road. Heck, don't even consider putting your own up!
>It would take away from MY bandwidth" attitudes have boiled from the BBS sysop's
>mouth for years.

That is a huge problem, yes. That's a part of the reason why hams are
deserting to the 'net. It doesn't change the fact that using the
telephone is not ham radio. Your "solution" does not address the real

problems, it just gives up and goes to a non-ham alternative.

>If you can't even shove your way into the current system, then you are forced to
>establish and provide your own. Not a lie but sad fact that TCPIP'ers have had
>to live with.

I'm not buying that excuse at all. There is not and has never been
any sort of viable TCP network in this area. What there has been has
been isolated and intermittent, and never lasts more than a few months
at most. Not once has any TCP advocate talked to the owners of the
existing system about using, changing, expanding, or improving it.
Even the DX cluster folks have been more cooperative than the TCP
crowd.

>The whole roadblock for TCPIP is summed up in the statement, "God may have
>created the world in 7 days, but He didn't have to deal with an installed user
>base." - PCM. The BBS ops have seized on the installed base as their ticket to
>maintaining their towers of control.

They designed it, built it, and maintain it, usually at considerable
financial and emotional expense. Where were the TCP folks when this
was happening? Where is the alternative net? Where is the discussion
meeting where we try to move to the better methods of networking?

>I stand by my comment. Prove your counter comment. Need proof for my arguement?
>The BBS system, need I say more? Now that the people who are actually spending

The BBS system is in place, and works, at least what there is left of
it. Where's the "better" system that we are supposed to move to?

>money have to contend with that installed user base, even though the user base
>isn't the one investing any longer, they are fighting a uphill battle. They
>start resorting to desperate means.

Pure whining rationalization. The folks who build the BBS/NetRom
network had similar obstacles to overcome, and instead of whining
about them, they went out and did what had to be done. They did it on
RADIO. Now you want to destroy it because it's "outmoded" but you
have nothing to offer but empty words and insults.

>You should be. BBS will die, regardless of the fact whether or not TCPIP does or
>does not.

That may very well be true. Where's the alternative, based on RADIO?

>And you base your whole HAM world on it, so yes, fear should be an
>emotion that you give rise to when considering the possibilities.

I have no fear. What I have is a bad case of burnout and apathy. I'm
waiting for somebody else to do the work for a change, and offer ME a
ready-made plug-and-play packet system that I can use with little
personal investment of time and money.

>suggest that you go read a networking manual. Check out Grapes. I can only

GRAPES is several thousand miles from me. Sorry, but they don't have
much to offer me. If I lived in their area, I'd no doubt be giving
them a try, and maybe even some support.

>assume that you feel that using a gateway simply implies using the internet to
>patch into amprnet. Thats plain goofy. Its biggest value, is that it opens up
>the data of the internet freely to those HAMS who want to use it.

I don't need GRAPES or ham radio to access the internet.

>authority. I think it would be more impressive to have radio links, but the
>installed base who contributes nothing, is happy tapping away at BBSs all day
>long.

Another really ignorant generalization that's contrary to the facts.
That "installed base" did the work that made it an installed base.
Now you want to whine when they use it as it was designed. Feh!

>> BBS net: Slow but improving
>>
>
>Improving? I need some facts, and just the facts . . .
>
>> TCPIP: Nothing
>>
>
>Global RF networking is working in the commercial arena. That only proves to me
>that my fellow responsible HAMS like you declare yourself to be, or simply being
>lazy about it.

Once again, if you cannot understand the fundamental difference
between commercial projects and amateur volunteer projects, you have
no standing to comment on this issue.

>Check out those Europeans you bow to continuously, and you should bow, they are
>innovators. They are running TCPIP from island to island. Its us, the BBS'ers in
>America, that are preventing a global TCPIP network, not the difficulty of TCPIP
>itself.

Prove that remark or withdraw it. I find it insulting, and I see NO
evidence that it has any basis in fact.

>
>Then can they be qualified as TCPIP folks? Maybe if you poke at them a
>little, they will come alive.

Why should I poke at them? I have no reason to use TCP, and there are
no TCP folks around here doing anything at all.

>> That's the silliest thing I've ever heard. The advantages of the
>> internet over AX-25 have little or nothing to do with the underlying
>> protocols involved. Changing the radio net to pure TCP/IP will hardly
>> make it faster or more efficient. Just the opposite, most likely.
>
>I'm not sure what comment this referred too . . . but TCPIP could be
>alot more effecient if methods were used to increase the effective

Could be, could be. A pig could be more efficient if he grew wings,
too. Why do all this promoting for something that hasn't even been
developed yet?

>packet size, and get rid of the long winded AX25 header. The house is
>too small for the both of them, but a properly designed lowlevel
>protocol could provide both compression and forward error correction,
>allow larger packet sizes, and greatly increase effeciency at 1200 baud.

Of course, and that's one of my pet peeves. We've had PKZip for a
long time, so why haven't the BBS ops and the Node Firmware writers
incorporated it into their programs. There are some compression
programs in some of the BBS programs, but as far as I know, they're
not compatible, and not supported by all the programs.

>> Where is the global net? That was the question. While you're at it,
>> where are the regional nets? Where can I connect BY RADIO to an
>> Amateur TCP/IP net locally?

>Probably not, but what in the world does that have to do with Charles
>continual redefinition of HAM?

Are you not one of those defending and promoting the wonderful world
of TCP/IP, and knocking the outmoded BBS paradigm? If you can't even
show me where I can use it, why should I abandon the BBS concept,
which has demonstrated that it CAN do the job quite well?

>Keep looking over the horizon, its coming . . .

So is Utopia, but I'm not holding my breath. All this Pie In The Sky
is not very nutritious.

>> Oh, crap. If you can't see the difference in a net based on a massive

>with what could be done.

I'm impressed by those who actually DO stuff, not those who sit around
and dream up reasons why what's been done is too slow, and try to tell
me I should do it their way, even if their way cannot be demonstrated.

>Uh, oh, another if you are a ham then you know that blah, blah, blah
>comment. I choose not to respond. My stand on this has been made clear.

If you don't know what OM stands for, you can't have done much
hamming.

[more "it could be" dreaming deleted]

>> financial and emotional expense. Where were the TCP folks when this

>> was happening? Where is the alternative net? Where is the discussion
>> meeting where we try to move to the better methods of networking?

>I have no idea, I was just getting my first computer at that time, and
>had never heard of amateur radio. You tell me . . .

Then I submit that you're a poor advocate for TCP/IP, if you can't
even suggest how to implement your ideas.

>> The BBS system is in place, and works, at least what there is left of
>> it. Where's the "better" system that we are supposed to move to?

>The BBS system has planted itself deeply. Eventually when its unrooted,
>it will be replaced. Change no matter how hard it is opposed, typically

Probably. I'd rather have an alternative ready before I abandon it,
however.

>happens anyway. It will be sad to say however, instead of a smooth
>transition when the internet changed to TCPIP, we will have a virtual
>blackout that will fuel and uproar, since we fail to look forward.

What we'll have is hams abandoning ALL packet radio, and not coming
back. It's already happening.

>> Pure whining rationalization. The folks who build the BBS/NetRom
>> network had similar obstacles to overcome, and instead of whining
>> about them, they went out and did what had to be done. They did it on

>> have nothing to offer but empty words and insults.
>
>Not you again, everything anyone says, except for Hank and Charles, is
>simply empty words and insults. Spare me ... I will however strike this

Charles can be quite insulting, and I've told him so. Your insults
are not so personal, but you insult our intelligence by saying things
that make no sense, and suggesting "solutions" that are unrealistic or
that depend on non-ham solutions.

>from the record to finish replying to your post. I haven't insulted you
>or Charles, so get off that soapbox before it collapses.

My soapbox is not nearly so shakey as yours, I'm afraid.

>Its coming . . . well at least the intercedent between radio and
>computer, specifically designed for TCPIP, only, though the software
>will route packets via routes found in AX25 headers. I can't explain any
>further at this time. It may end up a trade secret.

More Pie In The Sky, and proprietary, even. That's hardly in the
spirit of ham radio, if you ask me.

>> I don't need GRAPES or ham radio to access the internet.

>
>So, need and want are two totally different things. I got into HAM radio
>cause I WANTED to play. Not because I needed to. Think about it . . .

So did I. That's a figure of speech. You know what I mean.

>> Another really ignorant generalization that's contrary to the facts.
>> That "installed base" did the work that made it an installed base.
>> Now you want to whine when they use it as it was designed. Feh!
>
>Now its implanted and can't be moved over for better. Thats real good,
>isn't it?

That's not what I said. You're the one who seems to want to destroy
the existing network before you have a working alternative in place.

>I'm not sure whether or not it is a good idea to continue this
>conversation or not with Charles, but you are, for the most part,
>reasonable. An admirable trait.

I do my best. I just cannot see, for the most part, where the TCP
people have anything at all to offer me or the average ham who wants
to play on packet radio. APRS is getting some play now, but there's
only so much you can do with that, and it's only a niche that really
doesn't need much of an infrastructure to function. For many of us,
it's just a toy. It'll be useful in some public service events, but
even those are limited.

The remarks were made on the now-defunct tcp-group@ucsd list, within a week or possibly two of it's shutdown.

Here's all of the origial I have, including the message title: If UCSD has the old tcp-group posting archived, you should find some interesting reading in those last few week's messages, including the exchange below.

This message fragment has been HTML-ized, then de-HTML-ized, but the text has been left intact. I've probably got the original somewhere, but rather than fool with that, I'd check for an archive.

Subject: Re: 2300 MHz band reallocated

N5PVL:
Many *NOS stations are now set up for the single purpose of misusing Internet as a cheap, dumb way to avoid the use of radios. Internet message forwarders are the best known example of this.

We can't really afford that type of stupidity any more, IMHO.

KA9Q:
Why is this stupid? Many people outside ham radio would consider it more stupid to build a radio network that uses precious spectrum instead of using existing fiber facilities with much greater capacity and lower cost.

I feel that radio spectrum is too valuable to waste on point-to-point links that are better implemented with non-radio facilities.

Charles could really care less about the "goody goody" scene when the packet
net is being destroyed by barbaric techno-geeks while just about everybody
else is currently sitting on their hands, afraid to hurt the feelings some
thoughtless geek or another.

Go ahead and kiss up to the likes of Carl, David and Steve if that's your
bag. I will continue to call 'em as I see 'em, like it or not.

My feeling is that a good old fashioned bucket full of cold, wet reality
will often refresh and revitalize the discussion better than anything else.

I just describe what I see. If TCPIP goose-steppers want to avoid looking like morons and having that fact then pointed out, their best bet is to take a hike. I say this because I believe most of them are too ingorant and misanthropic to ever fit in with the other hams, and learn to play well with others. They have been given many opportunities, to no point.

If they could just figure out a way to be intelligent and cooperative without having to give up being arrogant jerks, I'm sure a lot more TCPIP devotees would find a way to make themselves more useful within the amateur radio community. But....

>degenerate into a historical subject, we need to keep up with
>technology rather step on the brake.

In the case of Radio technology, this is entirely true. Other areas of technological advance are not nearly as relevant to the hobby, and are only so to the extent that these technologies enhance the utilization of Radio.

It's easier to keep this all straight if you try to remember that you are a Ham.

>
>To Charles,
>The reason we don't have a worldwide tcp/ip network yet is
>because of inavailability of resources.

Yes, I agree. Resources such as character, snap, decency, and the ability to "play well with others" seem to be sadly lacking in the tcpip community.

No wonder they have never acheived anything except lilttle, piddly stuff. I doubt they ever will.

>Even ordinary AX.25 doesn't
>have a worldwide network for users, only mail forwarding links.

And amateur TCPIP doesn't even have that.

In fact, amateur TCPIP has NOTHING on a global scale, except a reputation for being noncooperative, destructive jerks.

>How do you suggest we span the Atlantic using RF? Either HF (no
>chance) or by satellite (who's paying?)

Yes, here we can all see the attitudes which will lead our progress into the next century...

The LandLine Lid chant " It can't be done with Radios."

No other group in amateur radio is so insistent upon their incompetency.

Well, I won't argue that.

>
>As a general note, I'm perfectly sure everyone would prefer it if
>people didn't get personal and start name-calling - it doesn't help
>and makes us look bad.

>Please correct me if I'm wrong?

No, you are entirely right. Of course, it must be remembered that engaging
in destructive, ignorant practices such as "amateur Telephone" hurts many
hams at the same time, much worse than any name-calling you could possibly
imagine.

In other words, stop acting like an irresponsible jerk and I'll be glad to
stop pointing that fact out.

Get the picture?

Until then....

> Could be, could be. A pig could be more efficient if he grew wings,
> too. Why do all this promoting for something that hasn't even been
> developed yet?
>

Your drawing a cycle where there need not be one. When implementing anything, you first have to promote the idea, get people interested, then you can go about doing it when you achieve the backing necessary to help out when the going gets rough. There is not alot of need to build something and then promote it, as this society has shifted away from that concept. Most people feel as if they should be asked first. I don't agree with that, but in this land of the offended, its a necessary step.

> Of course, and that's one of my pet peeves. We've had PKZip for a
> long time, so why haven't the BBS ops and the Node Firmware writers
> incorporated it into their programs. There are some compression
> programs in some of the BBS programs, but as far as I know, they're
> not compatible, and not supported by all the programs.

I differ in opinion on where this should be implemented. I feel that this should be implemented at the lowest level of a packet. If it was, you could even compress callsigns. The only thing one would need uncompressed would be a descriptor byte that would tell us what the packet is, if it is compressed, which dictionary, and the 2 byte CRC. Huffman (sp?) code the rest, with the dictionary that affords the best ratio and send it on its way.

However, this would discard the use of AX25 too quickly. An interim solution would be to implement the compression at the BBS data layer, and have it implemented as a detectable feature in a BBS node. Terminal programs and other BBSs could then probe BBSs to find out if the compression is supported or not.

> Are you not one of those defending and promoting the wonderful world
> of TCP/IP, and knocking the outmoded BBS paradigm? If you can't even
> show me where I can use it, why should I abandon the BBS concept,
> which has demonstrated that it CAN do the job quite well?
>

Why do I need to show you, when you already stated specifically that there was none in your area? That would futile and ignorant, would it not?

> I'm impressed by those who actually DO stuff, not those who sit around
> and dream up reasons why what's been done is too slow, and try to tell
> me I should do it their way, even if their way cannot be demonstrated.
>

As you said, you have no one in your area to do that. Once again, for me to try to hook you up, would be futile.

> If you don't know what OM stands for, you can't have done much
> hamming.
>

Actually quite a bit, but I'm mostly a electronics junkie, I prefer helping my friends get their equipment working, as I don't hear spoken speech very well at all when buried in the fuzz of a HF signal. I have been called Old Man on the radio when working at the club station here at State, as we were

liscensed in 1930, but I have never been called by the abbreviations, OM, therefore you can understand my lack of knowledge as to the meaning of that abbreviation, hopefully. It just never occurred to me that anyone would abbreviate it.

> >I have no idea, I was just getting my first computer at that time, and
> >had never heard of amateur radio. You tell me . . .
>
> Then I submit that you're a poor advocate for TCP/IP, if you can't
> even suggest how to implement your ideas.
>

You did not ask me to describe how I would implement my ideas. You asked me where was I when the BBS system was being created. I hadn't meant to offend you by not answering a question that wasn't asked . . . but since you implied you did:

1) Implement a protocol that specifies only the sender call, the receiver call, compression or not, the compression dictionary and the normal CRC. I've already got several forms of it scribbled out on paper. I am just looking for things I overlooked right now, such as hidden confirmation loops, its not as straightforward as it may seem to build one from the ground up. This protocol will be designed to carry whatever one likes, such as TCPIP or just plain old text, though a upper layer protocol would be needed to convey sequencing between first source and final destination, etc. There is no true linking layer specified, only a sequence number for packets that must be maintained, so that back to back packets can be sent and that confirmation of receiving a correct packet may be given to its sender. The sequence number only exists between to nodes in direct (not routed) contact with each other. The final addressee will also be confined to being the router or router client at the lowest level. Upper layers must provide any long distance routing, long distance being beyond direct contact, which means all machines are no longer digipeaters but are upper level protocol routers, this will of course require a increase in TNC complexity.

2) Design and build small, inexpensive routers for 1200 baud from 6809 chips or such, something very small, yet powerful enough to handle the job, and that has freely available devel tools.

3) Later on, devise powerful routers capable of handling 16 or more radios at once, so that multiple HF links can be handled, and that regional outbound traffic can be concentrated into one machine, reducing the number of sites necessary to shoot across country, therefore lowering cost, and increasing feasibility.

4) Revise the BBS standard to take advantage of the new protocol, simplifying BBS design.

5) Have all software be capable of easy setup for upper level IP routing operation, should a user desire it, with the routing software inherently available in the software package (its will be there, so why not use it type deal), along with a upper level protocol and routing package to allow route-by-callsign to occur, because as stated in #1, the lowest level will

never be routed.

6) Develop software for TNC2s that will do the same as 2

7) Increase ease of use in setting up a IP system to simple GUI point and click simplicity (thats what I will not tell you about now) and remove the hardware signal conformity requirement from a PC machine that is becoming more and more proprietary and harder to build for and write drivers, to a cheap blackbox with the minimal components required to make connecting as simple as possible.

> Probably. I'd rather have an alternative ready before I abandon it,
> however.
>

It would be nice, but packet radio has not proven to be forward looking these days, with the exception of the position reporting system, and as you note at the bottom of your reply, its not a major application, but simple and serves a purpose.

> What we'll have is hams abandoning ALL packet radio, and not coming
> back. It's already happening.
>

I wouldn't propose that dark of a future. Its amazing what the desire for keeping spectrum can do to a HAM.

> Charles can be quite insulting, and I've told him so. Your insults
> are not so personal, but you insult our intelligence by saying things
> that make no sense, and suggesting "solutions" that are unrealistic or
> that depend on non-ham solutions.
>

I have not proposed non-ham solutions. Check into my past, I have noted several times that our current long distance links, if converted to packet switching nodes, and were augmented with intelligent switching schemes, not unlike those already found on the internet, and data compression, our long distance links could handle quite a bit more data than they do now under the current BBS system.

What some consider to be a non-ham solution, is the connection of a radio intranet with the internet. I do not think that this is a "contamination" of the hobby. I want to see the long distance radio links so that HAMs have a complete, if slow, working packet switching intranet before that happens, but at that point we have no excuse to not connect to the internet. The internet has too much data available for us to exist separate (in terms of not having a way to access sites on it from the radio network). Perhaps this is a sticking point with you also, but to accuse me of not wanting a nationwide, at minimum, radio only network, is accusing me of something that I have never stated before in any of my posts to this newsgroup, nor in emails to other net users.

> More Pie In The Sky, and proprietary, even. That's hardly in the

> spirit of ham radio, if you ask me.

I said possibly, in other words its still up in the air. Depends on how long it finally works out to take to build it and finish the software. I'm really suprised no one else has thought of it. But enough of IT for now.

> >Now its implanted and can't be moved over for better. Thats real good,
> >isn't it?
>
> That's not what I said. You're the one who seems to want to destroy
> the existing network before you have a working alternative in place.
>

I do not want to destroy it, but the fact is, one must destroy to create. I'm sure a TCPIP nationwide network could exist along with what is currently available, but the hardware currently available can't handle all the code necessary to do so in an effecient manner.

>I do my best. I just cannot see, for the most part, where the TCP

> people have anything at all to offer me or the average ham who wants
> to play on packet radio. APRS is getting some play now, but there's
> only so much you can do with that, and it's only a niche that really
> doesn't need much of an infrastructure to function. For many of us,
> it's just a toy. It'll be useful in some public service events, but
> even those are limited.

But it may end up being what it takes to keep the hardware around for when the BBS system goes kuput, so that the next phase of packet radio, whichever direction it takes, can be ushered in. There is something to be said for small but useful applications.

> thoughtless geek or another.
>

Geeks and thoughtless don't go hand in hand, however, geeks and emotionaly
indifferent discussion do. I only use when I encounter someone like you, a
person who doesn't seem to be able to calm down long enough to read and
understand, but instead flys off onto land line lid accusation tangents without
even looking at what was said.

> Go ahead and kiss up to the likes of Carl, David and Steve if that's your
> bag. I will continue to call 'em as I see 'em, like it or not.
>

Techno geeks, as you call them, designed your mail system as it stands if you
remember. Now that you have a little taste of what can be done, however, you
have chosen to turn tale and run with the old.

> My feeling is that a good old fashioned bucket full of cold, wet reality
> will often refresh and revitalize the discussion better than anything else.
>

The only reality you bring to this group is that sadly enough, you can't debate
a single point without name calling or descending into landline lid analogies
where they don't even have a place.

> I just describe what I see. If TCPIP goose-steppers want to avoid looking
> like morons and having that fact then pointed out, their best bet is to take
> a hike. I say this because I believe most of them are too ingorant and

You give the same response to those of us who HAVE made major
contributions as well. How about posting some ideas and suggestions?

My guess is that you do not have anything to suggest ... nor any ideas.

> Steve

I was referring to the digital speed limit on HF that currently stands by
reason of the FCC. Of course you can gang lots of links, but at the expense
of lots of radio vs. if the law was not so, and we could "burn down" HF with
just a few channels. I was not implying that HF was physically limited, but
that it was legally limited.

Hank Oredson wrote:

> 1. A "hybrid network" still has telephones ... and that is it's problem.

I understand your point, no telephones, no tunneling, no incidental routing
through the internet, and I have no problem with this and through software,
an easy solution exists to prevent it (subnets), but ...

Do you also preclude ever interfacing to the internet for its informational
value to the HAM community? That is the proposal that I have attempted to
convey, but I seem to get attacked for LLing before anyone even reads
further enough for understanding.

Like this model:

Suppose Joe Ham wants to get Bob Hams web page?

So the DNS located on the radio network looks up Bob Ham's IP address and
the packet is fired out over the radio, through ever how many nodes needed
to gets its destination.

But then suppose Bob Ham wants to get onto the FCC callsign database later
on to look up Joe Ham's callsign? Packets must then flow from the Radio
Network to the Internet and vice-versa. Or even if QRZ database exists on
this TCPIP network, it must get updated, so it also must query the servers
located on the Internet at FCC headquarters. Is this considered Amateur
Telephone by your definition?

Thanks,

David

>Hi Roger,
>I'm concerned about the future of the hobby - too many people say
>the Internet is easier (no exam) and with far more to offer than
>amateur radio, in terms or communication.

To reiterate the point I made in my previous posting, which you
presumably don't understand - The public telephone service has far more
to offer in terms of communication than HF SSB and has done for many
years, but that has never stopped amateurs using HF. The BBC has far
more to offer in terms of television pictures than amateur television
and has done so for many years, but that hasn't stopped amateurs using
ATV. The local supermarket has a far larger variety of fish to offer
than the local river, but that doesn't stop anglers lining the river
banks every weekend. Etc...

In comparing the amateur *radio* packet network with the internet, you
aren't comparing like with like - one is part of your hobby of amateur
radio and the other isn't. If you insist on basing your approach to
packet on that comparison, then you only have one option - give it up!

> In order to maintain
>amateur radio as a technological hobby, rather than letting it
>degenerate into a historical subject, we need to keep up with
>technology rather step on the brake.

I'm not saying step on the brake - just the opposite, I'd love to see
people step on the accelerator! There is a huge technological challenge

available to anyone who wants to take up amateur *radio* in this country
in building a better amateur *radio* packet network. Where's the
technological challenge in the internet? Making sure you plug your modem
into the correct COM port on your PC??

>73! Duncan G7VQF.
>TCP/IP is great, it IS true Amateur Radio, and it does work. Very well!!

You mentioned in a previous posting that you -

>run exclusively TCP/IP in a regional network with likeminded friends
>here in SW England. We want to keep up with technology as much as
>possible - the only things stopping us are the 'not-true-amateur-radio'
>brigade, and those who think that 9600baud+ is still experimental!!!

Why is that stopping you? If you want high speed facilities, and the
attitude of some local sysops is "if god had intended us to use 9600
baud then Tiny-2s would have been born with RUH modems" then get out
there and do something about it - that's what amateur *radio* is all
about. Build your local high speed *radio* network, then build some
radio links to the next area where there is tcp/ip activity, etc.
There should be enough technological challenge there to keep you or
anyone else going for several lifetimes!

Charles,

I 'm sorry you're in no position to comment on a network you know nothing
about. I live here and see it, much to my disappointment.(sale/want
bulletins don't exist in VK).

> Only the socially retarded would suggest that discussion of issues be halted
> or limited because the participants disagree with each other and differing
> opinions freely circulate.

Charles ,

I wasn't suggesting anything of the sort, freedom of speech must prevail.
However people tire of paying so others can stroke their ego's in a public
forum. They switch off, and find something more constructive and enjoyable
to do.

> Usually it's a LandLine Lid who you will find trying to limit other ham's

> >of secondary importance.

> And there is the negativity you were so dishonestly leading up to.

Charles,

People have only so much time and money to devote to the hobby, unless
packet is perceived as being of relevance and of use to them they will take
their hobby dollar and hobby time elsewhere.

> >
> >Being able to forward "mega-bytes" of mail via packet (or amprnet) is
> only
> >worthwhile if it's of value to somebody, and I hate to say it... but it's
> >mostly rubbish.

Charles ,

I am constantly being told by local hams that they aren't "into" packet
anymore . Several reason are usually sited - lack of technical discussion,
the outdated nature of dx bulletins, lack of technical bulletins ,all
the politics (read shit fights).[Speed of network seldom a factor]
I'm being told that they can get all the above cheaply and dependably on the
"internet" courtesy of "usenet" and the plethora of mailing lists available.
Packet *is* competing for a slice of the 'market' , so these problems have
to be addressed, as without users there is no packet network.
Charles I wasn't supporting any point, just "telling it as it is down here",
unfortunately. Now users just don't care about this petty war being promoted
by some people (name calling-spitting -insulting), they want to enjoy the
mode, and just won't hang around if they don't. That's not negativity it's
fact.

Many thanks for your very thoughtful comments Charles , I'm hoping for a
brighter future for packet radio in 1998 as I still enjoy the mode.
I'd like to wish you all the best for the New Year and Happy Packeteering.

I'm not kissing up to anyone. Carl Stevenson is in my killfile. Get
a grip, man.

>My feeling is that a good old fashioned bucket full of cold, wet reality
>will often refresh and revitalize the discussion better than anything else.

[blah, blah, blah]

Namecalling and insults are not the way to win friends and influence
people, no matter how you rationalize it. You and Carl both do your
agendas far more harm than good by indulging in ad hominem rather than
sticking to facts, reason, and logic.

I'm sorry, I don't know who you are. Are you someone important? I guess
I don't recognize, or are aware of your accomplishments.

That's not to say you might have done something important, it's just that
I'm not aware of it. Was it something to do with networking? I usually
follow that technology, both RF and non-RF.

I could make a few suggestions. My first act as the ARRL President would
be to petition and lobby the FCC and Congress, to make it illegal to
transmit within the States and territories of the United States, for more
than 100 ms, and 100 Watts. That AM and FM would be illegal within the
Ham bands. That there would be no bandwidth restrictions on HF or
higher within the Ham bands.

With that stipulation I have many suggestions for bringing the ARS into the
20th Century past the Choo-Choo modes, and then into the 21st!

As it is now, I don't see how the ARS can exist on VHF and up, with the
dwindling population. AT&T and Motorola will own most of what we call
the ARS service bands.

Steve

Some sysops have locked Charles out of their systems because they
don't like his messages or his style, or whatever.

There are faster modems available, but no movement to ask for an STA
so that we can use them, at least not that I have heard about.

Existing modems, particularly CLOVER-2000, would allow for somewhere
in the relm of 3kbps over a voice bandwidth HF channel.

Suspect we will hear from the ip folks about how the long latency
makes them useless, but we can ignore that particular whine, since
there are many applications which function quite well with long
latencies,
and are of interest to very many hams.

A question I've asked for a long time, and never gotten a reasonable
answer: why is the ARRL not pushing these new technologies? It will take
the effort of a major organization to get the needed work (and
coordination
of effort) accomplished. Perhaps nobody has asked them?

Here's a beautiful external modem, perfect for packet, in great shape.
Pay whatever you want for it on bid over at eBay, where I have it
listed...

That was one way packet got started. From a modification of an old
computer modem. Not sure of the modle.

Is there a problem running BayPac's BP-2M under Win95? Tigertronics FAQ says that "BayCom and almost all of the multimode software will not function properly from within Windows" but goes on to say that "there is now a "true" Windows program that works quite well. It's called WINTNC..." Anybody using a BP-2M with Win95? How abt WinCE? I'd like to set-up a packet portable station with an HT, a BP-2M and a WinCE handtop (e.g, an HP320LX, which sells for less than a 200LX and has Office compatible applications).

I'm using the BP2M and Wintnc under win95. It works better on my system than Baycom 1.6. I registerd the program for $20.00 American and worth much more! Wintnc needs true/Standard comport properties. Not some wierd irq and io ranges. Runs great...if you need some help just drop me an email....73

Must sell.

Kantronics KPC-3 VHF single-port TNC.

This is an excellent TNC for old and new packeteers.

Includes APRS capable firmware.

$90 + shipping from Cleveland Ohio

I have some computer items that I am not using for packet anymore and I am
looking to sell these things to get an HF Radio for.

1: Zoom 14.4 int fax/modem $15
2: Zeos Pantera MotherBoard. This is a 486 DX60 Pentium w/16meg of ram and
serial/parallel/sound cables and manuals $45
3: IBM P70 Briefcase style computer. This is a 386dx30 w/8meg ram, 120 meg
HD w/packet programs on there. $75
4: 486DX33 w/4/5 meg ram, 250meg HD, 120meg HD, DOS 6.22 Diskettes, Dell VGA
monitor, Keyboard. $125

If interested in these items, please email me at kd6clo@geocities.com

John, KD6CLO

Hi all,

I have a KPC3 plus firmware version 7.0 available cheap, say $20.00 plus
shipping. If interested and or if my price is ridiculous email me and let
me know.

73s...

Hello

I want to know how fast a 1200 BAUD Packet modem is in
Kilobits per second.

Also i want to know more about Packet radio.

Please help me.

I am looking for any info, including websites, that have to do with
satellite communications using UHF/VHF. What is needed???   Do I need two
or more transmitters or can I use recievers for the downlink freq???
Any help will be greatly appreciated.

YOu only need transmitters for the band or bands you want to transmitt on and
recievers for the bands you want to receive. You don't need seperate complete
units.
You will need ssb or cw to work most of the birds. For the low ones which
at this time is all but Oscar 10 , most can be worked with 100 watts or less
into crossed dipoles.
It never hurts to have a small beam that can track them and less power.
You usually transmitt up on lsb and listen on usb.

There will be about 10 KHz of shift as the signal starts out high, then is on, then is lower in frequency as the bird passes over. You do not need a seperat unit, but it is helpful to have a seperate receiver from the transmitter so that you can hear yourself comming back so you will know where to listen for your replies. Also quiet often , you normally adjust your transmitter on the 2 meter uplink birds so you do not move the receiver. Hard to do with just a transceiver. YOu can use a receiver converter going into a lowband rig if you want to.

A 28.8 modem is 28,800bps. That kinda tells you how slow a 1200baud modem is. Verry slow, but slow is good when signals are bad.

Hope I could help you.

radio.swap,rec.radio.amateur.swap,rec.radio.amateur.packet,rec.radio.amateur.equip
ment,

1) Standard (brand) "Twin Bander" (Dual Band) 144 MHz/450 MHz FM
Transceiver. Includes optional 100 channel memory upgrade. Can also be
used for repeater or packet duties. All controls are on the microphone
so you can mount the main unit anywhere in your car or truck. It
includes the 2m extension cable between the microphone/controls and the
main unit. It works perfectly and looks near new. It's never been
abused. It has been modified so it can transmit/receive on Civil Air
Patrol frequencies. It is made for mobile use so it needs 12 volts DC

to operate on. It has around 50 watt output and can receive from 118 MHz to over 800 MHz in addition to the ham and CAP bands. It can receive on two different bands simultaneously, and can also be used as a cross-band repeater. Simultaneous receive and transmit is possible.

2) ICOM IC-W2A Dual Band FM hand-held Transceiver. 5 Watts output. Also modified for use on the CAP bands that have no negative effect on normal operations. This also receives outside the hambands too and includes 118 to over 800 Mhz. It can receive on two different bands simultaneously, and can also be used as a cross-band repeater. Simultaneous receive and transmit is possible. This unit can also operate packet. 60 memory channels.

3) Cushcraft R-5 HF Vertical antenna. Perfect for the 10M band now coming back alive. This unit is near-new, since it was only installed a couple hours before a neighbor threatened to sue me over it (CC&Rs). Please, no comments on that LOL... I dealt with that some time back. I don't recall the specific bands this antenna works but 10/15/17/20 come to mind.

If you don't want to spend cash, I will negotiate for certain items I want you can buy off your credit card and ship to me in exchange.

Please, PLEASE... don't contact me UNLESS you are serious about buying one or more of the above units, I get too much email as it is. I'll accept best offers for them all. $350 minimum for the Standard, $300 for the ICOM, $150 for the Cushcraft. You pay shipping costs.

73,

Jerry Bransford

Hello,

I have a 27mc CB-transceiver with a 1200 BAUD packet modem.

Is it possible to make use of a standard modem(33k6) and connect this on my
27 Mhz CB-transceiver.

Greetings

Quasi !!!!!

We laid a foundation for major ham(amateur) networks in the Netherlands...

what if i where a HAM who uses the CB network on a daily basis? If any CB'r who read this and has any questions about *anything* packet related, please post it in this newsgroup. This is what's internetnewsgroups about. Centralizing information. If you want to moderate by having a licence or not you're a very sorry person IMHO.

>

I noticed this attitude in dutch hamgroups as well. I'm sorry but i found the "go there" very offensive. I always thought we are to help one eachother in this field. Don't stick your head in the sand.

I'm sure I'll be corrected if I'm off base here, I don't really mean to

flame anyone (really!) - just a couple questions:

Doesn't the term 'CB' mean different things in different countries?
Looks to me like this guy posted from the Netherlands. Even if he's not
a 'licensed' operator, couldn't it be possible that in other countries
the unlicensed CB type operators are allowed to use digital modes? Or
maybe the Dutch government does require licensing for CB and maybe even
has effective regulation?

Just an observation, but looks to me like (assuming he's following local
laws) this guy is: being creative, trying to expand his capabilities,
attempting to increase his knowledge, experimenting... Basically doing
what many consider to be (at least what used to be) the heart and soul
of "Amateur Radio"

'Scuse me - getting off my soap box now.

Hello to all the group

I would like to invite all to use my Ham Radio Message Board located at
http://www.redriver.net/hamradio. I also have a Ham Radio e-mail list,
for info on the list send an e-mail to info@harenter.com.

Ed

Your modem expects to train on the line conditions first -- so you can't
use it for packet in the traditional sense (where lots of stations share
a frequency). If you could have a frequency each direction (it would
need to be full duplex) and can get a quiet enough channel, maybe it would
work. It would have to be pretty quiet though, because 33k6 needs
quite good line conditions.

I have for sale a YAESU FT 736.
vhf / uhf all-mode base station.
stock bands are 2meters+ 70cm. also has 6 meters and 1.25 meters.
plus the FVS-1/1a Voice Synthesizer and the FTS-8 CTCSS Module.

on a scale from 1 to 10 this rig is a 8.
it has very light scratches on it, a a tiny tiny ding in the tuning knob.
i bought it this way. the radio has been to yaesu for a Dust and clean.
and the IF circuit replaced. i bought it broken and had it fixed.
it is 100% working condition and is looking for a good home.

First $1500 gets it shipped free. no trades i need the cash.

Someone recently referred my to the PEST website for information concerning the conversion of a Sound Blaster sound card for Packet use. The website really doesn't describe the step by step process for this conversion. Can anyone refer me to a good book or a website that explains the process in simple terms because my education exceeds my intelligence???

Hey Ben,

Try a search at http://www.shareware.com - a search for 'BAYCOM' yields about 100 different FTP sites you can get Baycom 1.5 from, including one in Spain.

You can get info and other software for a Baycom modem at http://www.baycom.de

Good luck to ya!

Hi, i just bought a vx-5r and i d like to know what do i need to use it to
communicate by modem with someone? (cheap hardware...could i use a sound
modem in linux? if so how does it key the PTT on and off? a special
cable?)

also how do i communicate with satellite at 5Watts? is there a special
antenna for that?

Any suggestion for having more fun with this radio is appreciated thanks :)

ok and how much does this cost? (not the WinCE but the modem ;) i still
need to make my home made cable work for the vx-5 to PC interface...so i
think i wont be able to build this... :)

> Well... for Mir a simple ground plane antenna is all the is needed. It's

ok my english vocabulary surrounding ham radio isnt very good...what is a
ground plane antenna? how does it look like?

> You can work AO-27 with the rig with just a simple whip antenna. I use my
> FT50 and a MFJ-1715S to work the bird almost daily. The Arrow antenna will
> work much better, but it costs a bit more than the whip. The price of the
> Arrow is not very expensive and you'll have an excellent antenna!

same here (:) what is an arrow antenna? the whip antenna is a metal antena

like on most car? :) (ill have to learn my ham-vocabulary soon =)

i wont do packet on the road but i ll probably try to do sats
though...(while walking i dont have a car :)

this is pretty new stuff to me, at what altitude are those sats? can you
be multiple people on 1 sat using ctcss tones?(or dcs) and are there
packet sats? how does it work? hehe :) (i m too much curious :)

also, if i try to build an atenna myself how do i calculate its impedance?
(is that the right word in english ?:/)

thanks a lot!

alex

Well... for Mir a simple ground plane antenna is all the is needed. It's
quite easy to work with a ground plane, I do it mobile from a patrol car
with a mag mount antenna and at home with a homebrew J-pole.

> Any suggestion for having more fun with this radio is appreciated thanks :)

You can work AO-27 with the rig with just a simple whip antenna. I use my
FT50 and a MFJ-1715S to work the bird almost daily. The Arrow antenna will
work much better, but it costs a bit more than the whip. The price of the
Arrow is not very expensive and you'll have an excellent antenna!

Will the TH-D7 work with the 9600bps 140/440FM UoSat and KitSat?

Thanks

Daniel

PLEASE RESPOND VIA E-MAIL. I APPRECIATE YOUR HELP.

I am interrested in corresponding with any hams currently using TheNet firmware in an MFJ-1270.

Our club has one with the standard firmware that we are using as a digipeater. I would be interrested in anyone who has had experience with this TNC and TheNet X1J4 firmware. I would like to make the digi a node as well, but don't know anyone personally in the Cleveland, Ohio area that is involved in this activity. I am mostly interrested in finding help in setting the parameters in the firmware properly.

Why does it exhibit a long latency or better yet, where can I read about the device? The latency should not be too much of a problem as long as the transfer rate to the modem is fast. Basically, most commercial OSs can't deal with low speed to targeted point, but can handle delays. It comes from the industry's metropolitan-car-driver take on the internet, see how fast we can slow down.

Many applications are already configured to handle pipelining to make use of high bandwidth but slow turn around time.

>*radio* links to the next area where there is tcp/ip activity, etc.
>There should be enough technological challenge there to keep you or
>anyone else going for several lifetimes!

3 problems:
1) Money
2) Time
3) Money

I am taking 5 A Levels, am at school (Monday to Saturday), so
haven't got loads of time. Money - on pocket money plus the little I
earn as a web page publisher, minus that for driving lessons, not
very much to invest in equipment.

However, my group is putting the final touches to a Super-
hub/LAP network scheme that should prove to the AX25 lot WHY
TCP/IP is worth the effort.

And the link to Gloucestershire and Bristol is still only a basic plan
because of the fact that there is little cooperation with node sysops
to use IP friendly firmware such as X1J. Can be done, you
understand, but where there no will, there's no way....

>"play well with others" seem to be sadly lacking in the tcpip community.

I take that very personally - the tcp/ip group I belong to are a great
group of people - our lives DON'T revolve purely around radio, and
not yet on our CONV net or in the mailing lists have I ever heard an
angry word. No name calling, put-me-downs. Constructive and
technical discussion. Think about it...
Also, due to the above comments, why does our group keep
accepting and helping new members, of which there is now a
steady stream, with time, equipment, etc. ???
>
>No wonder they have never acheived anything except lilttle, piddly stuff. I
>doubt they ever will.

Rubbish. If you aren't involved, of course you wouldn't know.

>>How do you suggest we span the Atlantic using RF? Either HF (no
>>chance) or by satellite (who's paying?)
>Yes, here we can all see the attitudes which will lead our progress into the
>next century...
>

Hmm, so you don't like realism, just idealism. Nothing's perfect, and
if we aren't given the support of national societies (who are to
wrapped up in HF and Constesting) it's quite difficult.

>The LandLine Lid chant   " It can't be done with Radios."

Funny, I haven't heard it.
>

FWIW:

A well written TCP/IP stack should be able to handle the long
latencies. Wireless connections are inherently high latency. If the
IPers are whining about latency over these type off networks, then
they should be figuring out how to tolerate the latency, instead of
whining.

However, I am not a proponent of doing IP over these type of links.
There are far better ways of handling traffic over these wireless

links. IMHO, while TCP/IP over wireless is cool (if properly implemented), it is not the answer to all problems.

My belief is the amateur HF network is for message-based traffic. I define message-based traffic as message units. These can be in the form of BBS, APRS, ect. It should be used for getting these information messgae units around long distances.

I like the idea of a whole network HF/VHF/UHF being totally wireless. TCP/Ip has a place in it at the LAN level, but not at the long haul level. ANd it should not be the only LAN level protocol. Nothing wrong with AX.25 for simple messaging. (I include BBS's as a subset of messaging.) Implement gateways to get those messages back and forth. HTML can be abstracted and packaged to be transfered over non-IP networks.

Some of the best commercial packet networks do not use IP. Some of them do.

Now I have been guilty of being a so called "Land Line Lid". I helped implement a natiowide comercial wireless IP wan, that used LandLine for basestation interconnect and backhaul. It had it's place. I also have used TCP/IP amateur networks that use LandLine for intersite connection. And there is a place for them.

But at the sametime, I like the APRS VHF/HF net, totally wireless. Real neat. I see talk of LandLine connections for it. THat I am NOT for. APRS was designed a complete wireless net. ANd it should keep evolving to do so. Packaging APRS info into message units to be sent over HF links is a great idea. Low overhead. (Yes, some sort of gate/converter needs to be done, but it can be done).

Anyway, some of you may agree with me, some may agree with a part of me, some may think I am smoking something good. But for a total wireless network we need to think of an abstracted model. IP cannot be used for everything, though it can play a part at the local level. I believe, and I might be naive, that what was intended in the first place. But landline connected IP radio links should not be part of the picture. THey should be standalone entities for those who want to do that sort of thing.

I usually don't join debates in this forum, but I wanted to bring a different approach to the subject in the form of practical discussion.

Thanks for reading.

But it still wouldn't be like being able to ping California servers from
North Carolina, over the radio. However, with the current HF legal
limitations, what you propose would be necessary if the long haul links
are few and far between.

Since the situation is already worsened by the fact that we will have to
work with a skeleton system, a restrictive routing scheme will be
needed, so that only mail servers and packets addressed to talk daemons
(determinable by examining the IP packet) may talk over long distance
links, until link speeds improve. That way, the IP infrastructure can be
built on what is already presently available, and later on when the
higher speeds become available, we can open those links to unrestricted
access by any node in the network, and the worst work will have already
been done.

HTML could be requested and sent via mail until link speeds improve, but direct requests to httpd or http services would be blocked from passing through the router. Also, talk daemons could be constructed to operate more effeciently by sending a complete line at a time, guaranting nice, full, compressable text packets.

FTP would also be forced to operate the same way. Site contents could be requested by a command in a mail message, and sent back over mail, as well as files, like some systems on the internet still do. And even better, these sites could time outgoing files to times other than peak hours.

The final poker chip could be to remove AX25 from the long range links and replace it with a protocol that would allow us confirmation, and complete compression of EVERYTHING in the packet, excluding of course, packet length, compression method/dictionary, and error detection crc. As a matter of fact, the sequencing could also be moved into the compressed data area of the packet. Eventually the same protocol could replace AX25 in the LANS as old equipment dies.

I think its possible, folks. Any comments?

Earlier in this thread, I tried to generate a thoughtful message regarding the problems faced by amateur packet radio. Among them was the thought that perhaps most of the problems faced by radio amateurs were in fact political, that the major reason the packet networks were falling apart was that people failed to cooperate.

I see from where this thread has taken itself, that I was in fact apparently 100% correct.

Sometimes I am really disenheartened by the attitude that many hams seem to have. There are a whole bunch of hams who like nothing better than to disparage the achievements and goals of others, because they do not jibe with what they consider the "True" way of pursuing amateur radio. Discussions rapidly turn into juvenile name calling matches, and our hobby and its desirability as a leisure time activity fades more and more.

Perhaps Kurt Vonnegut was correct about radio amateurs.

Mark

All sorts of things are possible, incuding the ideas you outlined.

A more important question would be "Is it likely?"

Is this what the individuals who make up mainstream packet radio really
want, or is it another "maybe someday" technical fantasy, (ala TAPR) with
no relation to the realities we must work with every day?

Remember, it's not the theorists who build things.. Life is entirely too
short for that.

My station is currently QRT. TexNet is experiencing problems in my local
area, and I thought to take advantage of the outage by using this time to
add a couple of sections to my tower. (Santa Ham brought me a couple of
tower sections, and monster reference books on PERL and JAVA this year.)

The weather has not been good, and I have to be very careful since I do all

the work myself. I'd rather be off the air a few days than get into a big hurry and get hurt. It takes five minutes for me to put on my climbing belt and get to work. It takes hours, sometimes days to arrainge an antenna party when you live this far out in the sticks.

Naturally I hate to be off the air after five years of continuous operation. It's one of those deals where you go ahead and break a few eggs, looking forward to the omelet you'll end up with.

I've been wanting to switch over to FlexNet, but decided that a good signal was more important so I'm seeing to that first.

That's entirely true. You have seen the quote of Greg Jones of TAPR talking about "routing around" high-speed terrestrial networks (such as TexNet) with Internet links on a national basis. They should know better, but hams do tend to believe what the president of TAPR says. As a result, many potential node-ops have abandoned their plans, rather than go to all of that effort just to be "routed around" by LandLine Lids. Greg has managed to dishearten many node ops who struggle to maintain existing systems as well.

One serious political problem we face is incompetent "leadership". Gerg's statements are about as non-cooperative and politically motivated as you can get. He knew what he was doing.

Some high percentage, at any rate.

Horse-hockey. You can pretend that an Internet link is amateur radio if you like, but most hams prefer to stick with reality.

>Discussions rapidly turn into juvenile name calling matches, and our hobby
and its

Once again you have become confused... This discussion is NOT amateur radio. It's an Internet discussion group.

You are really having a problem differentiating between Amateur Radio and the Internet, aren't you?

>Perhaps Kurt Vonnegut was correct about radio amateurs.

How long was Kurt a ham, I wonder? There seems to be a lot of misconceptions concerning Amateur Radio by Non-Hams. Have you noticed?

And you'd do well to ask yourself *why* that's so. What do we know that you don't? What has allowed us to build a large fast network and keep it running smoothly for over a decade while you haven't?

Could it be because we've avoided the hangups about BBSs and message forwarding *applications* while concentrating on delivering fast and useful packet switched intranets and internets for our users? Could be. Does your packet switched network support web servers? Ours does. Does your packet switched network support digital audio and video? Ours does. Does your packet switched network support a gateway for worldwide internet access? Ours does. Etc.

We've been successful because we've laid an infrastructure that supports any application our users want to run. We haven't had wars about what constitutes "Real Ham" activity. We haven't let the tail wag the dog. We've just promised and delivered fast and accurate switched transmission of our users' packets across our network. What applications are served by those packets is our users' business, not ours. We don't install or run application servers. We just provide packet switched network services. That's *our* business, not our users' business. We've kept that line very sharp over the years. We had very good leadership in the early years who set it up that way. And we've had the good sense to keep it that way.

The ARRL has been extremely hostile to any attempt toward faster
digital operation on HF. They've fought attempts to raise the permissible
baud, they have fought to narrow the permissible occupied bandwidth
for automatic networks, and they've been extremely hostile to the idea
of SS on HF. They are the primary roadblock to faster HF operations.

Actually, a HF link *lowers* latency. What it lacks is *capacity*. By
jumping over a number of VHF+ hops, a HF link shortens latency
dramatically. But the low permissible speed of HF operation means
it offers little capacity to take advantage of that low latency. Thus
it becomes a very constricting bottleneck for internetting various
local intranets.

Well, to start with, you have a much larger concentration of hams per
square mile than anywhere in the Intermountain area. A larger user
base gives you a much better chance of making something work. The
only spot in the PNW that really has a large concentration of hams is
in the Puget Sound area, and they're so good at infighting that they
can't even maintain a decent link over the Cascades into Eastern
Washington. I dunno how it is in Four-land, but out here in the West,
folks are sort of independent and cantankerous. Getting any three of
them to agree on anything is not a trivial task.

>Could it be because we've avoided the hangups about BBSs and message

No, it's because you've avoided or bypassed political squabbling.

Sure. It's called the Internet.

I beg to differ. If you've been successful, it's because you've had a
few folks who are dedicated enough to start a project and stick with
it for more than a few weeks, months, or years. It's because you've
been able to avoid or, more likely, to bypass political squabbles. I
applaud your ability to do this, but I suggest that the technology

you're using is far less important than the fact you've been able to
avoid being shot down by ego trips, either inside your organization,
or competing with it.

Bottom line, however, is that you did it "your way." Dissenters can
play, or leave, just like anywhere else.

Somebody in your group has some rare and outstanding "people skills,"
I'm guessing. In any volunteer organization, this is much more
important than technological skills. Among hams, diplomacy is a rare
thing indeed.

OK, TexNet is recovered, my BBS is back up, and there was only one personal
message, from a VE3 call.

If you entered your message at an amprnet station, that would go far in
explaining nondelivery. And, as has been noted, many of the Internet
forwarders play the "Lockout Lid" game as well.

Try again, if it's important to you.

Here's the deal, there is no amprnet in my area, I haven't even been
able to locate the guy who used to do it. I have no idea how I will
manage to find someone to allot me the necessary IP addresses for an
amateur network. I have some names, though the person who gave them to
me said it was iffy that they even covered that sort of stuff in our
state.

The message was entered at w4ral, a real forwarding BBS system by your
standards.

Try that Brian dude at ucsd who "owns" the amprnet. (Since he ponied up the 50 bucks or whatever.)
One of the other tcpip enthusiasts can give you more specific info on contacting him, I'm sure. (I forgot his last name and callsign.)

If Brian can't fix you up with a block of IP addresses, he will know who can!

(pssst! -- For best results, don't tell Brian I sent you....)

>The message was entered at w4ral, a real forwarding BBS system by your
>standards.

It still hasn't arrived, which makes me suspect either a problem at W4RAL, or a "Lockout Lid" somwhere along the line. Normally, once a P type message is in the system, there's not a heck of a lot which can stop it except deliberate action by one of the forwarding station's SYSOP. (Lockout Lid)

Do you disparage the packet net and BBS net there is your own neighborhood, the same way you do here? Have you made a local reputation for yourself as a "LandLine Lid"?
What I'm wondering here is if you might have made one too many anti-packet or anti-BBS comments to one too many hams there in your local area, thereby making a "reputation" for yourself as a troublemaker.

Being an obvious troublemaker can sometimes lead to poor service from your local BBS. This is by way of explanation, not agreement with the policy. For my part, I always see Lockout Lids as trailing slime behind. The practice is ignorant and destructive, in my book.

For the curious: I have had only one real "troublemaker", in my time as a SYSOP. The guy kept trying to tell me how to run my station, but rejected my suggestion that he run one of his own. (I'm the only BBS in this area - Another one would provide some backup.)
Since I ignored many of his suggestions, he made several attempts to "hack" his way into having SYSOP status so he could make changes on his own.
When that didn't work, he became abusive, and finally ended up threatening my family, and having his 75 meter "goon net" buddies send me threatening mail, phone calls, ect.
Then tragically, the guy was found dead at his job (Local Motel clerk) all shot full of 9mm rounds at close range. He had pulled a gun during a dispute

over motel laundry with a customer, and the customer defended himself,
sending "troublemaker" to his reward.
I never got to thank the guy. He ended up getting in trouble over the
incident, though really he shouldn't have.

At any rate, what I'm leading up to is a confession of my one time as a
"Lockout Lid". I denied "troublemaker" access for a month or so at one
point. By the time he managed to get himself killed, though, he had access
again.

Try sending your message again.

Nope, its clear from the bushes I've prodded under what I want to do. I don't set out to intentionally disparage anything. I figure they can have their choice, but I don't want to be left with a inadequate dying choice, myself.

> What I'm wondering here is if you might have made one too many anti-packet

> ignorant and destructive, in my book.
>

Nope, the BBS specifically noted that the message was already being forwarded to a Rocky Mount BBS. I figured it was "on its way". What codes do I use to have the BBS system confirm and send trace if such a thing exists? At least I can find where the bottle neck actually is.

> At any rate, what I'm leading up to is a confession of my one time as a

Perhaps I'm too cold or indifferent, but: How touching . . .

Pearce

Well, I don't know your amateur population statistics, but I do know
that there are about 4,000 amateurs in the 30,000 square miles
serviced by the GRAPES network. Of that 4,000, about 500 are
active in any fashion with packet, and the network itself was built
by about 20 people who wanted it bad enough to do it. We didn't
try to arrive at a consensus with that 4,000 or that 500, we just
went ahead and built the network. Those who found what we had
done interesting, exciting, and useful signed on board later.

>>Could it be because we've avoided the hangups about BBSs and message

>No, it's because you've avoided or bypassed political squabbling.

That's what I said. :-)

Once you subtract out the petty BBS wars, there is really very little that is contentious among packet radio operators. Give them a fast and reliable packet switched network, and they don't find much to complain about except that it isn't expanding as fast or as far as they'd like it to do.

>Sure. It's called the Internet.

Too bad, ours uses packet switched radio technology to cover 30,000 square miles, and has a gateway to the wired internet to boot.

>or competing with it.

There's no doubt we've been blessed with a dedicated core group of networkers who have unstintingly contributed their time, expertise, and funds to the network. But the technology has been key too. It has kept us competitive so that we continue to attract users rather than see them dwindle away. 56 kb is just now coming to the dial up masses, we've had it for over a decade. (And soon we'll leapfrog the wireline technology again by a large enough margin to maintain that edge for another decade.)

>Bottom line, however, is that you did it "your way." Dissenters can
>play, or leave, just like anywhere else.

You bet. We know we aren't a monopoly, and we don't act like one. If someone wants to do something different, they are more than welcome to go right ahead and do it. If it works better than what we're doing, we might ask to be included. And we are always willing to let others use what we have built. But we won't let the tail wag the dog. We will not

let others dictate how we run our network.

>Somebody in your group has some rare and outstanding "people skills,"
>I'm guessing. In any volunteer organization, this is much more
>important than technological skills. Among hams, diplomacy is a rare
>thing indeed.

I don't know if I'd call him a dipolmat, though everyone who met him liked
him. He was the most dedicated and hardest working fellow I ever met.
He gave unstintingly of his time and talent, more than any five other people.
And he is the real father of our network. Sadly, he is gone now, but he won't
be forgotten by those of us who knew him. WB4GQX, more than anyone,
made GRAPES what it is.

Of course, without WA4DSY we wouldn't have the technology we have.
And without KD4NC we'd likely not have a viable network architecture.
And there are a number of others who have worked tirelessly to make
it all come together and who have kept it running. We have been blessed
with a good group of people, but I don't think that's too unusual. You can
find good people in any group of amateurs.

I see I've used "we" a bit more freely than I should have. I've played a part
in GRAPES over the years. I served as president of one of the member
LANs, as a GRAPES board member, and as a member of the network
committee, but it really should be "they" and not "we" who get the real
credit. Anyone motivated could have done my part, but some of the
people we had (and have) are really special in their dedication to seeing
that the bits flow.

They're the ones who get out of bed in the middle of the night and go to the
mountain top in an ice storm to get a switch back on line. They're the ones
who drive hundreds of miles in a weekend to help some local learn how to
maintain a switch. They're the ones who climb the towers and water tanks
to fix antennas. Etc. Though I will brag a bit and say that I did once climb a
tower and do some welding up there to repair it when no one else dared go
up. And I have, perhaps uniquely, mounted a home refrigerator 670 feet up
a tower to act as a conditioned cabinet for a 56 kb switch. Kept the cokes
cold too. But while I've spent hundreds of hours at sites over the years,
others have spent thousands of hours building and maintaining sites.

I guess folks havn't been keeping up with the various things that the TAPR HF SIG has been doing. There are some neat things happening. One of the items is listed below. The message below is an excerpt from last August of a new modem that has been under test for several months now and a lot of people are beginning to use. This is just one of a few modems that groups here and in Europe have been playing with.

Hopefully we will have the new EVM56002 interface kit available in the next few months will allow more people to get into playing with the modems the core development group are writing.

Cheers - Greg, WD5IVD

>Cheers,
>
>Rob
>
>

Sorry that I have not posted more details - just not had much time to work on and refine a specification as yet. Hopefully more at the DCC.

A short(?) description for those that cannot wait :-)

As things stand at the moment, it is FDM (not OFDM);four RC-shaped DQPSK waveforms in parallel each at a 75 baud symbol rate - 600 Hz at -60 dB. Modulation is DQPSK that varies from BPSK to 16-DQPSK, selectable to match conditions. The full bandwidth is always used, even at low data rates, however, both time and frequency diversity is then employed. The idea is to use a common DQPSK demodulator that does'nt know the difference - it just demodulates the input waveform as if it were m-DQPSK. That is the job for the packet dissasembler that knows how to unpack the data from information provided in a data header. For that purpose, each packet contains a header that provides a) frequency tracking information, b) bit phasing/clock information (extracted from the sync vector), and c) packet formatting/status information (an ECC protected field). Actual data contents are convolutionally coded using a variable rate code on the inner level, with an outer level block code.

Three modes of operation is planned:

Mode A: Unconnected broadcast mode with full ECC.
Mode B: Hybrid ARQ.
Mode C: Networked (CSMA) with encapsulated TCP/IP.
Mode D: Read-along mode. It is possible for a third party to decode and
        read traffic, pretty much as we can do with packet at the moment.

All specifications will be published for the benefit of those that wish to implement the protocol. It will be an "open architecture" although I hope to encourage commercialization - consulting and user-support services can be arranged. One essential item that would be made available is a "golden" CD-ROM - this will contain the printed standard, also test and diagnostic signals that will help one to verify whether your implementation conforms to the standard or not.

Hope this helps in the interim,

Multiply the area by about ten, and divide the ham numbers by the same amount, and you'll be looking at the situation in the Intermountain area. Yeah, we have some nice mountains that you don't, but those have problems, too. The site that has the solar repeater that I helped establish many years ago has a coverage radius of 50-150 miles, but it's only accessible, by 4x4, for a few months in summer. Not only that, but it's nearly a full day's drive to get there and back, let alone do any work. And that doesn't count the broken axles, shredded tires, etc.

>by about 20 people who wanted it bad enough to do it. We didn't

That's about the only way you can do anything that needs doing.

>that it isn't expanding as fast or as far as they'd like it to do.

Once again, I beg to differ. Hams will fight about anything, as we both know. Ham Packet is unique in that it requires widespread cooperation among hams to work properly. The "BBS factor" has nothing to do with it, as far as I can tell. Using the Internet lets you bypass most of the politics, which is one major factor that's causing hams to use it. Any _radio_ based network that requires standards and coordination to work properly is going to run into the same problems that the so-called BBS/NetRom system has experienced.

>>I beg to differ. If you've been successful, it's because you've had a

It's been said that "There's no limit to what you can accomplish, if
you don't care who gets the credit."

>to go right ahead and do it. If it works better than what we're doing, we
>might ask to be included. And we are always willing to let others use
>what we have built. But we won't let the tail wag the dog. We will not
>let others dictate how we run our network.

There are two vital items there. Letting others (no matter how you
might dislike them) use the system is essential, as is not letting
"popular vote" tell you how to do technical stuff.

>They're the ones who get out of bed in the middle of the night and go to the
>mountain top in an ice storm to get a switch back on line. They're the ones

>maintain a switch. They're the ones who climb the towers and water tanks
>to fix antennas. Etc. Though I will brag a bit and say that I did once climb

[stories of dedication deleted]

Well, all that is essential, plus attracting other qualified people to
take over when the originators leave for one reason or another. Most
folks who have the proper skills in one area lack them in others, so
once again, it's a matter of rounding up the resources needed,
motivating them, and keeping interest alive. This usually takes an
extraordinary person as "leader." The needed synergy seldom comes
together in a critical mass, seems to me.

Ah, Charles, but you DID reply ... the laughter is coming
from others and directed at YOU.

And TAPR has done 1000x more for packet radio than you
could ever do if you devoted your entire lifetime to it.

>course require a increase in TNC complexity.

You have basically just described AX25 UI frames minus the optional digipeat
field. No need to reinvent the wheel here. It's been done. Chalk another one up
to the foresight of Phil Karn. Compression probably belongs at the application
layer. There is no reason to require information to be decompressed just to
get to the network layer header required for network layer routing.

>2) Design and build small, inexpensive routers for 1200 baud from 6809 chips
>or such, something very small, yet powerful enough to handle the job, and
>that has freely available devel tools.

The TNC2 is already capable of being a router at 1200 baud when fitted with
the right firmware. Again there is no need to reinvent the wheel here. And
besides,
you need to be looking at supporting something much better than 1200 baud.
You could do that as Gracilis did with the PacketTen via use of a Motorola
communications processor to handle up to T1 rates. But the drawback to that
is you wind up locking yourself into a single source proprietary embedded hardware
architecture. There's nothing wrong with using the generic PC as your switch. It's
cheap, its available, and it is definitely multisourced. Router code is already
available, and being used in the field too. All you need in the way of hardware
is a HDLC interface, and the PI2 fills that niche.

>3) Later on, devise powerful routers capable of handling 16 or more radios at
>once, so that multiple HF links can be handled, and that regional outbound

>traffic can be concentrated into one machine, reducing the number of sites
>necessary to shoot across country, therefore lowering cost, and increasing
>feasibility.

It's called a Linux PC. We have it, no need to reinvent the wheel.

>4) Revise the BBS standard to take advantage of the new protocol, simplifying
>BBS design.

BBS's don't care. Give them a virtual circuit and they work. This is an
application
layer issue. Don't give it another thought. Powerful multiuser BBSs already exist
for Linux. They don't care what's on the other side of the socket interface.

>5) Have all software be capable of easy setup for upper level IP routing

>deal), along with a upper level protocol and routing package to allow
>route-by-callsign to occur, because as stated in #1, the lowest level will
>never be routed.

That's what nameservers are for. They exist.

>6) Develop software for TNC2s that will do the same as 2

Already exists and is in use.

>7) Increase ease of use in setting up a IP system to simple GUI point and
>click simplicity (thats what I will not tell you about now) and remove the
>hardware signal conformity requirement from a PC machine that is becoming
>more and more proprietary and harder to build for and write drivers, to a
>cheap blackbox with the minimal components required to make connecting as
>simple as possible.

Linux. Accept no substitutes. Setting up Redhat is virtually point and click. If
you must supply something for Wintel boxes, use a shim under the existing
protocol stack. An external box is the wrong way to go today. Bring the network
inside the computer where it belongs.

I'm not at liberty to say, but it will be *significantly* faster than 56 kb.
Details will be forthcoming at a future DCC if it works as expected.
Otherwise, we won't be publicly embarrassed if it doesn't. :-)

It doesn't require an extraordinary person. It only requires an ordinary
person who will expend extraordinary efforts. In other words, someone
willing to get off their butt and actually do things. That sort of person
will attract others. You can't lead from the back of the pack. You have
to get out front.

The internet is the best model we have for demonstrating what can be
achieved with switched packet technology. It serves as a benchmark
against which we can measure our amateur efforts.

>Packet is part of amateur radio, as such it doesn't have to compete with
>the internet - because the internet isn't part of amateur radio! If you
>can't see that point, then I think you need to ask yourself what your
>hobby really is.

The internet is a competitor with amateur packet radio, or more precisely,
the local dial up ISP is a competitor with amateur packet radio. That most
of the participants here are carrying on this discussion through a local
dial up ISP instead of via a packet radio link shows that by and large
amateur packet radio is losing that competion. It need not be so. We
have the technology to beat dial up. And it is fun to try.

What is not fun is beating a dead horse with a buggy whip. But that's
what many who claim to be amateur packet radio proponents are doing.
The methodologies they are using are as far behind as the buggy whip,
and just about as relevant.

In other words, an extraordinary person. How many people in ham radio
fit your description, do you think? Hell, how many people in Real
Life fit that description? Also, you left out one important skill,
diplomacy. All the initiative and drive in the world won't do much
good if you can't motivate others. This combination is very rare, in
my experience. I know I sure don't have all the factors required.

As the saying goes, If it was easy, anybody could do it. It's lots
easier to sit around and bitch than it is to get involved. I know,

I've done both.

That is a very poor argument! I am contributing to this newsgroup via a
dial-up to my isp, so what? In this newsgroup I *talk about* amateur
radio, but I don't regard that as either being part of, competing with,
or being a substitute for my amateur radio activities. In another
newsgroup I talk about cycling, but that isn't a substitute for riding
my bike!

Not many. But anyone of them could. It doesn't require extraordinary
abilities. It just requires work. Most people are capable of work. Few
people are even frightened by work. Why know plenty who can lay
down right beside work and sleep like a baby.

I think diplomacy is overrated. Determination is much more important.

>As the saying goes, If it was easy, anybody could do it. It's lots
>easier to sit around and bitch than it is to get involved. I know,
>I've done both.

I didn't say it was easy. But nearly any one of us is capable of doing it.
It's a matter of motivation and attitude. If we have that fire in the belly,
nothing will stop us. If we can't stoke that furnace, then nothing will
be accomplished. It's a lot easier to stoke that fire if others around
you are stoked, and that's why groups form around such people. It
is a feedback that keeps everyone's enthusiasm high.

Try some of the following web pages:

Glenn Elmore's Highspeed Radio Page
http://www.tapr.org/~n6gn

TAPR SS Web Page. Includes info on the 128Kbps+ FHSS project
and other stuff. Has a good biblio to other SS high speed sites
http://www.tapr.org/ss

The Ottawa 56K and other high-speed goodies
http://hydra.carleton.ca/

TAPR Packet Radio Home page -- some of these links are from here:
http://www.tapr.org/tapr/html/pkthome.html

Dale WA4DSY 56K site. Dale designed the original amateur 56K modem
http://www.wa4dsy.radio.org/

Another good source for high-speed packet radio information is the
Packet Radio Network in Slovenia page. They have been developing 38.4K and
faster systems.
http://www.hamradio.si/packet.html

I think you will find some interesting things on these pages as a beginning.
These are the ones I can remember off the top of my head.

Lots more out there if you look around further.

Also check out the various ARRL and TAPR Digital Communications Conference
Proceedings (http:///www.tapr.org/tapr/html/publications). There has been
a lot published in those over 16 proceedings. Just read over the abstracts.

Cheers - Greg Jones, WD5IVD

Hi,
   Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them. Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I have placed the columns I have already published in past issues of our newsletter.

Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit or update old ones and add new columns as write them, and I wont have to send re-posts.

The Cost..I will ask that you do not edit the articles (except for the normal formating to fit you newsletters), and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to Garland Amateur Radio Club (K5QHD). The address for the GARC is on the web page. I really do understand how tight a club postage budget can be.

Where... http://web2.airmail.net/gerryc/newham.html

I am posting this every six months or so to the newsgroups.Four new
articles just added bring the total up to 21.

BTW the address for GARC webpage is http://web2.airmail.net/gerryc/garc.html
and my personal web page is http://web2.airmail.net/gerryc

73's

What I am looking for now is a 2 meter ht. Would perfer ht with accessories and in good working and cosmetic condition. Here is what I have for trade.

What I do have for trade is the following items...

NEW * Only used 1 month Connectix COLOR Camera w/software - Hooks up to your printer port.

NEW * Less than 3 months old - CCT Color Security Camera - value over $350 i can send a digital picture of camera if interested)

NEW * Only used 2 months - Color TV Computer Card, works perfectly, used either for cable tv or your outside tv antenna * Comes with Win 3.1 and Win 95 Disk .. Cost me $250

If you would be interested in a trade, please contact via email at KC4OXP@QSL.NET

I would like to known the simplest way to get started, ie. can it be done
using the sound card? What equipment do I need? Any site for beginner
like myself?
All I have right now is a Bearcat 200 xlt and a computer.

Thanks in advance.

I have just aquired a FT-50R Dualbander HT. The radio is in EXCELLENT condition and includes a 5 watt battery also included is The FBA-15 (3 AA size Batterys). This radio DOES NOT HAVE THE DIGITAL VOICE RECORDER OPTION! However it still is a excellent rig and you can purchase the option if needed/wanted.

If interested email me at kc4oxp@flash.net

Price -$325 plus shipping
Things that I would consider for trade -

Dual Band mobile -
Complete weather station -
Plain Paper fax machine -
Other ham gear, tell me what you have..
HF gear -

Hello you all.

I am building me a receiver till I saw that I can get the COILS nowhere !!

Does anyboby can tell me where to buy these coils or HOW TO MAKE THESE COILS AT MY SELF ?

These are the coils I need:

L1 - 4.75T 0.7mm ECW TAP 1.25T
L2 - 4.75T 0.7mm ECW CT
L3 - 4.75T 0.7mm ECW CT
L4 - 4.75T 0.7mm ECW
L5 - 10.75T 0.4mm ECW
L6 - 4.5T 0.7mm ECW CT
L7 - 4.75T 0.7mm ECW TAP 1.25T
CH1 - 3T 0.4mm Ferrite Bead.
CH2 - 3T 0.4mm Ferrite Bead.
T1 - 20T pri. / 5T sec.

All coils 5mm NEOSID F29 Slug.
0.7mm Coils spaced 1 wire dia.

I dont understand the above so who can tell me more about the above information ?
I was wondering whats the meaning about this ECW, SLUG, TAP, etc..
Who can fill in these questions ?

ECW TAP ?
ECW CT ?
ECW ?
Ferrite Bead ?
NEOSID ?
F29 Slug ?

I thank the peopele who response me !

With Kind Regards.

Geert Pirens

ECW - Enamel Coated Wire

TAP - A tap on the coil 1,25 turns from one end.
Ferrite Bead - A premade cylinder of powdered iron with a hole through it.
NEOSID - got me.
CT - Center Tap
Slug - A preformed powdered iron material with threads that screws into the coil to adjust its inductance

Dear Geert,

I vaguely remember Neosid was the name of a coil manufacturer.
Could be wrong.

But to design single-layer coils given the number of turns, wire

gauge, diameter of former, winding length, or the other way about by experimentation, for a required inductance, or to resonate with a given capacitance, or, or, or, etc. Download "SOLENOID.exe" program from my website in 10 seconds. Not zipped up. Free takeaway. No catch. Can be used immediately.

Will cater for antenna loading coils, big trans-match coils, and tiny little things at 145 MHz.

Generally speaking, having designed a coil using the program, its inductance can be increased by, crudely, up to 40 percent by inserting a small iron dust or ferrite slug. But you will need internally threaded coil formers.

Regards, Reg.

Hello--
"Neosid" maye be either a British or other European manufacturer's trade
name for an inductor family (like "Miniductor").
73,
Brad AA1IP

Try:

http://www.neosidcanada.com/

Neosid is alive and well still making ferrites and magnets.

(plenty of others are saying how to make the coils.)

I am interested in putting a station up on TCP/IP on one of my "spare" Macs
(I have several older ones "laying around"). I have put a Mac Plus up on
Net/Mac before. But I'm wondering about MkLinux. Is it possible to install
MkLinux on a machine and just install extra drivers to run the extra TCP/IP
for amateur radio? Are the Unix drivers for amateur radio compatible with
MkLinux? Is there advantages of one over the other?

I'd be real interested in hearing about others experiences with getting
Macs on TCP/IP.

Thanks,

Yes , this a nice Methode ..
You have a AX25 Device , and you can work with more Software via
AX25 Device (TCPIP) to Packet

I have for sale an AEA PK-96 9600/1200 Baud TNC. This TNC contains
AX.25 levels 1&2, Host and KISS modes, an 18K mailbox, Node operations,
true DCD state machine for open squelch operation, and many other
options.

Real good TNC. I used it for a good while running a personal BBS
without
problem.

Thank you for the reply. I did visit your site and found some useful links,
but there doesn't seem to be a lot of info on TCP/IP for ham radio on any
of the links I explored.

Can you tell me some more about how this is setup? Where do I get the AX25
device? How do I install/configure it? Will it work with all the versions
of Linux for Mac (MacBSD, MkLinux, etc)? (I only have one PPC and had been
planning on using a 68k Mac, which counts out MkLinux. Perhaps I can get a
good second-hand PPC.)

Do you know of any other Ham specific Linux resources (especially stuff
that will help me install and configure it)?

Thank you very much,

Does anyone have software to use with this packet modem that runs
under windows? (not in a DOS window)

I'm trying to not have to restart in MS-DOS mode every time I want to
use my modem. If I try to run it in a DOS window, it doesn't seem to
work right and won't connect to any of the BBS's in the area. It adds
a weird hum to the signal.

Thanks in advance.

There are some programs working with bycom compatible modems under win.
I use Winpack6.3 with G8BPQ node software as the TNC driver (works great
with the NOD2BAY driver).
You could try WINTSTHOST 1.3 I heard it has a Win TFPCX.

Try on http://www.ej1bbs.demon.nl there are some programs and links to other
sites where you can find some good software.

Hi all,

At the moment i'm a bit "experimenting" with WinFBB, hence the following
question:
Does anyone know if it is possible to connect WinFBB with CHLNET via BPQ on the
same PC running Window95?
And if so, how can it be done?

I've tried with the available doc's but no succes sofar.... All tips are very
welcome!
73 and thanks in advance,
Wijnand PA3HFJ.

radio.packet,rec.radio.amateur.equipment,rec.radio.amateur.packet,rec.radio.swap

I have a heavily modified (enhanced) MFJ 1274 TNC for sale. It has the NB-96 G3RUH 9600bd modem installed, and has a dual image eprom allowing switch selection of either the standard TNC-2 firmware, with KISS and APRS, or the WA8DED Host Mode firmware which many packet programs are written to use.

I have added a couple of front panel switches.One allows selection of 300, 1200, or 9600 bd operation, and the other selects from one of two inputs.

The 1274 has a tuning indicator and works great on HF packet at 300 and 1200 bd.
The 1200 and 9600 bd capability is used on VHF/UHF packet. With the dual input capability, they can both be connected at the same time , and switch selected.

I also have installed the TAPR XR2211 DCD upgrade kit for optimum performance on busy frequencies.
The unit comes with complete documentation and radio interface cables.

I am no longer active on packet and will ship this unique TNC to an aspiring packeteer for the modest sum of $160.
If interested contact Don, W9SL, at 303/814-1503, anytime, or via direct email.

Hi

I have 4 Items for sale. I originally had these items posted as for pickup in the MD area. I changed my mind and am willing to ship these items.

Note: The price for the 830 does not include shipping. I am not sure how much it will cost to ship the 830 but if anybody is interested, I can find out

Here are the items I have left:

Kenwood TS-830S HF Transceiver with Shure Desk Microphone- $500
Ameco Preamplifier for HF through 6 Meters- $75
Kantronics VHF1-60 2 Meter Amplifier- $150
MFJ-1276 TNC- $75

For more information, EMAIL me at keithc@mail.com or call me at (410) 682-3594. If you are in the MD area, I can demonstrate the 830 or anything else to show you that it works.

Thanks,

Keith Calligan

Is 9K6 packet possible on a Alinco DJS-41C ?

If it is posible:
- what mod is needed ?
- What kind of TNC is the best for lowe(r)(st) price(s)?
- Where to find discriminator output ?
- What is highest Baycom speed possible ?

If it ain't :
- too bad.................no way..... what is possible ?

Who has expierience with PR on such a handy an can help me out ?

Regards,

Eric Buining (eric.buining@club.tip.nl)

Eric,

Your radio should work, but you would have to were to take the discriminator output. That can be quite chalenging. What band are you planing on using your setup on? If it is 2mtrs MFJ makes a cheep 5 watt packet transciever which is all set for 9600. If it is 440 or 220, Paccomm makes a 2 or 5 watts xmtr. The baycom will run at 9600, but there isn't, to my knowledge, a NOS driver for it. So if you use it you won't be able to run any version of NOS, but you could run baycom version 1.6 or later. Your best bet for relable 9600 packet is to buy a packtwin card from paccomm with the 9600 baud modem, but that will cost about $400 US dollars. But if you buy a kamtronincs TNC, you will have to spend about the same money, but the Packtwin is the BEST interface available for high speed packet because it goes into an ISA slot in your computer. For info on the Pactwin you can visit the paccomm homepage at: http://www.paccomm.com

Hope this helps,

Chris

I have bought Redhat 5.1 but have not installed it
yet.

I am also a ham radio operator and am thinking of
getting into digital radio such as 2M packet.

Since I know very little abt either subject
above... can someone tell me if there exists Linux
based ham radio software ....and if so where?

Also... does there exist a Linux app for
programming my Yaesu 50r handie talkie that is
like the ADMS -1C?

   There's a substantial amount of Amateur Radio apps for Linux. The most notable is that AX.25 is included as a standard part of the kernel. There are satellite tracking tools, tools for accessing the PACSAT's, logging software, etc. Check out the HAM-HOWTO.

There is software for ham radio, I dont have the address off hand
of the sites, But the news group that you should ask these qustions
is in the rec.amateur.digital.misc

the outher news groups are
 rec.radio.antenna
 rec.radio.homebrew
 rec.radio.amateur.misc
 alt.ham-radio.packet

Hello,

Are you driving between cities and searching for a Repeater in the Western States? The Travel Repeater Directory and Maps contained in this 29 paged book will make it simple. Whether you're out for a drive
or on vacation, locate the nearest city or highway to you on the map and

the closest repeater will be listed.

We encourage you to visit our site and take a look at this new book, and any feedback you can provide will be greatly appreciated.

Hi there,

does anyone now how to modify the IC 2350 for 9k6 PR FSK ?
The Manual says, there is already a "detector out" pin on the mic-jack, but it seems to be a simple amplified and squelched audio output.

Also I need to know where to apply the tx-nf from the modem.

Tnx in advance, Dirk.

There could be numerous cause
1. make sure cable from pk232 to computer is tight
2. when running software make sure pk232 is ON
3. If the above two fail open pk232 up an remove battery, wait 5 mins
replace battery (with a new one hopefully)

one of these should clear problmn

I use a Kantronics, but I think I would check the cable. Is it the
correct cable for the radio? are all the lines connected, or do you
have a line shorting or not connecting? If you built the cable
yourself, make sure all the connections are good.

good luck,

The PK-232 startup sequence lights the 4 lights on the left, then after a
second will light one of the operating mode lights on the right. Baudot comes
up after a hard reset (see your manual for doing the reset).

Make sure that the power supply is at least 1 amp.. The 60 milliamp wall warts
are NOT enough. If that does not work call the Service Manager at Timewave and
I'll help arrange a repair (That's me)..

I have 4 items for sale

-Kenwood TS-830S HF Transceiver with Shure Desk Microphone- $500 plus shipping
-Ameco Preamplifier for HF through 6 Meters- $75
-Kantronics VHF1-60 2 Meter Amplifier- $150
-MFJ-1276 TNC- $75

Please call Keith, KE3RT at (410) 682-3594 for more information or reply to this message. I don't get a chance to read the newsgroups that much.

Thanks,

Keith Calligan

I want to try out 2M packet.

Was thinking I could use a mag mount mobile
antenna stuck on top of a file cabinet in the
house for it since I need a mobile antenna anyway.

Can I do this and if yes.... what brand/model mag
mount is best?

If it can hit the node then it will work.

However having other users not hear you is also
a problem (collisions) so the better coverage you can
manage ....

Homemade J-poles are cheap.

Can you point me to a webpage that shows how a
J-pole is built? I don't know what they look
like.

I had the same problem some time ago Jack, it was due to the power
supply dropping to less than 12 volts.

My PK-232 is a bit long in the tooth now but is still giving good
service.

http://www.altavista.digital.com/

shows quite a few hits.

the 2m version I've seen is 1/2 copper pipe and a couple of
fittings ... under $10.

You certainly can use a 2 meter mag mount antenna for packet. Any
brand of magmount is pretty well the same as the rest.!!!!!

If you can use a 5/8 wave that is preferable, but you'd have to have pretty high ceilings if you are mounting on a file cabinet. A 1/4 wave would be about 22-23 inches including the mag base.

Pretty much any brand is OK. 73, DavidC AA1FA

OK... thanks to all for the advice.

Sounds like a mag mount will work fine for home 2M
packet use..... but sounds like I ought to go for
the 5/8 wave, huh?

Others suggested building a J-pole..... but I need
a mobile antenna anyway as I don't have one for my
car (or a rig.... yet).

Besides.... aren't J-poles rather long for an
apartment?

How do I connect a Radio Shack HTX202 to a PK80 TNC?

     I can recieve no problem, but I have to wire the transmit
side... I think it's like an Icom where I run the PTT through

a 3k resistor and the modem thru a 0.1uF capacitor, but I don't
want to blow it up.

   Go to oak.oakland.edu, in the /pub/hamradio/mods directory. There is
a document that will tell you how to perform the small bit of minor
surgery necessary to tap the discriminator. I tried it on mine, and
it works fine.

   Yup, it works exactly like the "leaky-PTT" used on Icom HT's.

It's so low cost/simple to use a TMS3105/3101 for the
1200/2200 hz tones . I still have 10 BAYCOM modems using
the 3101 .

I am trying to find out if two TNCs could be used to transmit data between
two computers and a normal phone line to access the net from a remote local
such as wireless modemsthat are coming out on 900mhz.

Working on a baseband sub-processor for killer homebrew rig and need some help: I know of the following commonly used signalling formats - are there others? Especially looking for formats that are public or at least published somewhere. The following list contains lots of (R), TM, etc. - ownership as applicable where not noted:

Continuous Tone Coded Squelch System (CTCSS)
Digital Coded Squelch (DCS)
Single Frequency, Two-tone Sequential like
  Motorola Modified General Encoding Code Plan
  Motorola General Encoding Code Plan
  Motorola Code Type Assignment Method

  Metro-Page 10 and 100 Code Plan
  Motorola Sub-Audible Code Plan
  Modax / Moden / Alert Center Code Plan
  GE Code Plan
  Quick Call (Code Type Y)
  Decimal Digital (5/6) Paging
HF AIRINC SELCAL 2+2 Paging (aviation)
DTMF Code Squelch / ANI
DTMF Paging   (the nnn*mmm kind mostly amateurs use)
DTMF Messaging (the Kenwood kind; anybody know if it's on-line anywhere?)
ASCII ANI
Trunked - Motorola
Trunked - Logical Trunked Radio (LTR-E J Johnson)
Trunked - EDACS (GE)
Trunked - SmarTrunk
Single-frequency Inversion
Split-band Frequency Inversion
CODEC means, like Moto ASTRO, SecureNet, GE SecureGuard, etc.
AX.25 Packet (HF, VHF, 9600 baud)
RTTY (all modes, shifts, etc.)
CW (A1 and A2)
SSTV (all modes)
Digital Selective Calling (maritime)
Emergency Alert System (new) and EBS (old)
IMTS (is this still on the air anywhere?)
Station control tones like
  Non-Simulcast Key Command Function Tones
  Simulcast Key Command Function Tones
  Station Group Disable (Knock-down) Tones
The International Radiotelegraph Alarm (maritime)
The International Radiotelephone Alarm (maritime)
Class A/B EPIRB Sweep Alarm

Thanks!

73 de Rob wm8s@pobox.com

several months. For between $230 and $250, you can buy the Garmin 12xl
brand new and 12 X the machine that the 40 is. (12X because it is a 12
channel reciever as opposed to a single channel like the 40. Check out
 News group sci.geo.satellite-nav for answers to most GPS questions.

When I found them I thought "Great! Native OS/2 Packet programs."
Sad to say, I've tried them both and neither program worked with my
KPC-3 (although they might work with a MFJ or other true tnc-2 clone).
So I use Paket 6.1 (dos). It runs fine under OS/2.

This is a general use GPS. It has a sequential 8 ch receiver and will store
250 user waypoints. Backlit screen, external power connection port and
data/ computer interface port. I have the manual and case. You can scroll
through 4 different navigation pages. This unit is in new condition and
$115.00 + shipping takes it!

I did a re-install of Winpack 5.4 (and yes, I know 6.2 or later is out) and whenever I go into mail options and select TPK mode I immediately get 'error -- out of stack space'. hit ok and winpack closes. I had this error previously and somehow got rid of it but I don't remember how or what I did. I am running a pk232mbx running winpack under win-os2 (I run OS2). Anybody got any ideas? Inserting the statement 'stacks 9,256' or whatever it was, is unnecessary in os2 and besides, doesn't help.

Does this come with any options included ie interface cable etc?
Also, this unit has an external antenna connector?

BEGIN -- Cut Here -- cut here
Am interested in an off-the-shelf software package that will do the following:

1. Receive incoming RTTY traffic (300 bps ASCII , 7 bit data, odd parity) thru one of the PC's COM ports.

2. Capture and store traffic as individual text files on the PC's hard disk. The 4N's sequence (NNNN) shall be used as EOM marker.

3. User should be able to retrieve, display and print these files according to subject, date or text search string.

4. Some selcall capability is also desired, which means that only text files that contain a user-defined text string are saved on disk, others are ignored.

Comments, remarks and suggestions welcome.
Thanks in advance.

USAF Academy Falcon Gold
Mission Data and Telemetry
Description

Signal Electrical Characteristics

The downlink frequency for Health & Status and GPS data is
400.475 MHz. This is accessible by most scanners and 70cm
amateur radio gear. We're using slightly modified Tekk KS-960
transmitters to modulate the digital data stream from a Kantronics
KPC-9612+ node controller onto the FM carrier with about 3.5
KHz deviation. This Direct Frequency Modulation (DFM) is a
Minimum Shift Keying technique that's standard with the amateur
radio community to send 9600 bps data, as developed by G3RUH.
If you have a scanner, use the "FM-narrow" setting (but see the
caveat below). To your ear, it will sound like a rush of background
noise.

Each bit of the the bit stream from the AX.25 protocol routine
occupies 0.104 microseconds. But before sending to the radio, it's
converted to an edge-oriented signal: a one is converted to a
transistion (either 0 to 1, or 1 to 0), and a zero is converted to a

no-transition. This wavetrain, in turn, is XOR-ed with a 4800 Hz square-wave. (Notice that each half wave -- a high or low pulse -- of the 4800 Hz signal corresponds to one bit time at 9600 bps.) Finally, this signal is appropriately attenuated and fed to the radio as the actual "audio". The amateur radio community 1200 bps format is the same except the last waveform is used to select either a 1200 Hz or 2200 Hz tone. For the 9600 bps data stream, there is no base-band modulation into audio 'tones'. The digital waveform itself modulates the radio.

The highest fundamental frequency is 4800 Hz (from either the clock or the data stream, whichever you prefer), but this is a 'squarish'-wave, not a sine wave. The communication channel must preserve amplitude and phase information for signals significantly above 4800 Hz to preserve the proper waveshape. Typically as much as 3 times this much -- 12 to 14 KHz. Most scanners do not have this fidelity and many amateur radio transcievers older than a few years do not have this fidelity. You can use these radios, but the methods to do this are beyond the scope of this article.

Some newer radios have special provisions made just for this fast data. Even an expensive scanner such as the AR-5000 doesn't have an audio signal path that works (even with adjustable audio bandpass and compensation). We use the front panel connector, which provides a signal directly from the FM demodulator.

Digital Data

We use the AX.25 packet protocol, which surrounds actual data bytes with 20 bytes of extra stuff. Unlike standard RS232-ish data, this is a synchronous format, so no start or stop bit is used. One byte of data immediately follows the previous byte of data. Sometimes you'll hear this called an octet to signify this fact. Similar to serial comm popular in the PC world, within a single octet, Least Significant Bits are sent first. An AX.25 packet is described as follows (A single transmission may consist of multiple packets.):

1 octet - 7E flag byte
14 octets - to/from addresses
1 byte - Control byte
1 byte - PID byte
N bytes of data
2 bytes - CRC checksum
1 byte - 7E flag byte

Notice the 7E flag byte generates 6 consecutive 1 bits. One additional feature of AX.25 is that if the data bit stream itself at any time provides five contiguous 1 bits, the sending station inserts a zero bit after the fifth 1 bit. The receiving station, of course, strips this extra 'stuffed' 0 bit before trying to interpret the data. This ensures there won't be any 7E hex values except as the first & last bytes of a packet.

Each of the 14 address octets is shifted one bit left. All address octets have a 0 in the LSB position, except the last address octet, which has a 1.

Data Content

Falcon Gold will take 40 millisecond snapshots of the the GPS 1575.42 MHz L1 frequency. The RF signal will be downconverted and then sampled at a rate of 2 MHz. Since the C-code (course position code, not the C computing language!) is modulated onto the carrier at 1.023 MHz, FG will obtain a roughly 2x oversampled bit sequence. Remember, Nyquist theory doesn't apply here because we're not regenerating a waveform, but rather sampling individual bits. This process will yield 80,000 bits of data.

52 bytes of header information is tacked on the front of the actual data, yielding a 10052-byte sequence that needs to be downloaded to the ground station. A space-borne microcontroller will sample health and status information from the satellite, collect the 10052 bytes of mission data, and send it all to a KPC-9612+ AX.25 TNC.

The data logged by our ground station will look like that shown below. This is the data format that we can most readily use here at the Air Force Academy. If possible, please e-mail us logs of data in this format.

TT8_Time =3D 01/16/96 07:27:45
H&S44
```

Each packet containing GPS data (#2 through #43) is exactly 246 bytes long, inlcuding the date/time stamp done by the receiving station, and the terminating CR/LF pair. The dummy-data sets shown above include embedded CR/LF characters so the '1's and '2's, etc don't roll off the right side of your screen. Use the MSTAMP and DAYSTR commands (Kantronics commands) to make your TNC do the time stamping shown above, and please ensure your time is within a half second of UTC. Ensure your TNC is not doing line wrapping for the terminal display.

The H&S packets (#1 and #44) will remain a fiixed length for the mission, but we'll be making changes right to the last moment. Shown above is the current state of affairs. The last GPS packetThe first 48 bytes of packet GPS43 are sampled GPS bits. After that, are 208 bytes of unuseable binary values.

Every four minutes, another 44 packets of information (another frame) will be downlinked by the Falcon Gold payload. Combining multiple frames into one log file is fine.

have you looked at the PROCOMM PLUS COMMS SOFTWARE ??

I have used this software to handle news wire text at various baud rates
and to look for catch words in the file headers for saving files to disk.
The script language for programing procomm plus iseasy to use to set up the
for your requirements.
I think DATASTORM is the software house that wrote procomm plus try a
search on the Net.
 If you require other info please e-mail me at tonyfay@indigo.ie

regards, Tony EI6EQB

Barry, read it again, carefully this time. He isn't selling anything
he is "interested in an off-the-shelf software package that will do
the :following:" I take it he is lokking to buy something.

So....... as you say,.

"It's better that you find out now than go around thinking you have
acheived something."

Steve

My program, BTRAKR, needs some testers.
Two versions of BTRAKR are now working.
BTRAKR01.LHA for Amiga, is on aminet.
Version 02 for Amiga will *soon* be on aminet.

Version 01 for MSDOS seems to work, but I have not uploaded it
anywhere yet. Anyone care to suggest where to?
I can email either 02 for Amiga or 01 for MSDOS.
The program is freeware, but I do ask that anyone who uses it
send me email about its accuracy (or lack thereof).

For now my preferred email address is:
bobdavis@cadvantage.com

BTRAKR attempts to predict the landing location of a helium
balloon, such as that flown by Amateur Radio operators.

I picked up a couple of Heathkit HD-4040 TNC's this weekend at the local
ham fest. They seem to work OK, but do not have the original ROMS
installed. Would anyone have a set laying around the shack they would like
to get rid of? I would also be interested in a dump from the roms, as I
could burn my own if need be.

Thanks
Dale

I don't know if this truly helps but I have heard that if you increase
the " Files" in the dos setttings you can reduce the number of stack
errors.

I've got an interesting problem;

I'm trying to get two MFJ-1270B's to talk to two terminals,
back-to-back. It works fine, except I have to always put
the terminals in 7-bit word length. If I put them in 8-bit word
length, I get garbage on the screen. I've tried ALL combinations
of 7 & 8 bit word length and all the parity settings, but they don't
seem to do anything at all.

When I get this working properly, I plan on hooking one TNC
up directly to the serial port of an RLC-1 repeater controller.
I'll put the TNC in transparent mode, so when I connect to
it, I'll be "talking" to the RLC-1 serial port.

The RLC-1 is fixed at 2400 bps, 8-bit word length and
can't be changed.

I have the TNC set to 2400 bps, but it still doesn't
work. I believe the problem is the word length.

When replying to this message, please remove
the words NOSPAM from the reply address.
Thank you.

Heard that there are some surplus antenna towers on trailers floating
around.

Anyone who has information on where to find one-- it would be greatly
appreciated if you'd pass the information on to me.

(FYI- I am in Southern New Jersey)

Hello Ted!
Me thinks thou hast missed the boat by about 12+ years!
I used to live in Vineland, and when Cable-TV was coming in hot and
furious, I decided to ride around the area, check for TV towers by a
house that had the familiar Cable line going into it, and 'offer' to
dismantle their obsolete tower for them for no charge! I believe I
acquired over 30 towers like that! Which I then sold to people up here
in No. Jersey. Around the Middlesex/Union Counties areas.
Yepper.....I made big bucks those 2 years!
Try doing what I did. There may be some left.
                        Regards,
                                Brian

Thanks for reading,

I am a weather buff. I am interested in setting up a home weather
station to have several of the benefits from the info that would be
provided. The anemometer would be very valuable because of the wind
speed and direction in relation to my antenna array, ie: which direction
to leave my beam pointed when wind speed exceed 35mph. Rainfall,
temperature, and barometric pressure are always nice because of the
forecasting insight they give. Lastly I'm tremendously curious regarding
weather data.

Well this my dilemma, I was all set to purchase a Peet Bros. Ultimeter
2000 when it came to my attention that an amateur in the Atlanta area
who is primarily a DXer, as I am, bought and setup the Ultimeter 2000 in
his shack and little did he know that the CPU gave off a S9+ noise level
on the 20M band. After working with Peet Bros. for a couple weeks or so
the problem could not be resolved. So this is my question, currently is
there any amateur ops out there that use Davis or any other reasonably
priced weather station that does not have this problem when setup in
your shack.

Hello David, I have a Davis Weather Monitor II a 2 years ago and not have
interference problems in any band.
Have a Hy-Gain TH6DXX, ICOM 761 HF and the Davis Weather Station at 3 feets
in same shack and not problems, is IMPORTANT a good GROUND
Also have a Kantronics WeatherNode for Radio Packet and the same, don't
have interference problems.

Is the packet system aboard MIR left on during voice QSO's ?

I keep hearing packet while voice is being sent from MIR and am not
sure if the packet is from a ground station or MIR.

I would THINK they'd turn the TNC off while making voice contacts!

Any info on this would be appreciated

I would suspect that the packet you hear is not coming from Mir - it's unconsiderate hams in your area who are continuing to send packet up to Mir, even though it's in voice mode and nobody's responding.

That's one of the key reasons why automated packet stations are discouraged for use with Mir. The same radio and frequencies are used for both voice and packet, so any packet from the ground is clearly a form of interference when the cosmonaut is trying to use voice.

THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hi there!

Question: would you like to make thousands of dollars, quick, legally, with NO CATCH? If Yes, then keep reading. Please take five minutes to read this article. It will change your life, just like it did mine. If you're not interested, I apologize for wasting your time.

It's true! You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! Interested? Then here we go.

A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this one, which said; "You could make thousands of dollars in weeks with an initial investment of only $5!" So, I thought, "Yeah, right, must be a scam!"... ...but like most of us I was curious. So, I kept reading.

It said you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it!

So I thought it over, talked to a couple of people about the whole thing. I figured what have I got to lose except for 5

stamps and $5? So, I tried it.

Well, guess what...within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, and didn't give it another thought. But the money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made a total of over $1,000!!!! In the third week, I had over $10,000 dollars, and it's still growing. This is my fourth week (Oct 28) and I've made about $42,000 TOTAL, and the money is still coming in.....

Let me tell you how this works and more importantly, WHY it works. Make sure you print a copy of this article NOW, so you can use the information from it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST." Fold each piece of paper in half. Take five $1 bills and place ONE in each piece of paper. Then put each piece of paper in to it's own envelope and seal it. You should now have 5 sealed envelopes , EACH containing a piece of paper AND a $1 bill inside the folded paper. Make sure the words ..."PLEASE PUT ME ON YOUR MAILING LIST." are written on each piece paper. By doing that, you are creating a service and it's PERFECTLY LEGAL.

Finally, mail 1 envelope to 1 of the following 5 addresses:

1. S. Shaw, 611 23rd St., Sacramento, CA 95816

2. G.Charters,5809 Hudson St., Vancouver, B.C. Canada V6M 2Z2

3. D.Miller, 26 Aristone Dr., Berlin, NJ 08009

4. B.Peale, 1619 Nth 5th St., Perkasie, PA 18944

5. D.Watson, 2430 W.Territorial Rd., Battle Creek, MI 49015

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, etc..) and put YOUR NAME as number 5 on the list.

STEP 3: Post your amended article (with you name at #5) to at least 200 news groups (I think there are close to 18,000 of them). This is easy to do. You can either type out this message (altering any part you deem worthy, EXCEPT the name and addresses) with an ordinary editor or with your web browser's 'To:News' key at the upper left corner of this screen (Netscape Navigator 3.0). After typing this article, save a copy. Any time you want to post this article on a newsgroup, just use a flashy subject and post your saved copy.

That's it, easy! Now, post the message to at least 200 DIFFERENT newsgroups. 200 IS THE MINIMUM. The more you post, the more money you will make. You are now in the mail order business and will start receiving your $1 envelopes from various

people all over the world within days.

HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may even want to rent a PO Box, eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor." Please be sure to check that all the addresses on the envelopes are correct.

.

LET ME TELL YOU WHY THIS SYSTEM WORKS!!!

Out of every 200 postings, let's say I ONLY receive 5 replies, which is actually VERY LOW. So I made 5 dollars with my #5. Now then, each person who just sent me $1 makes, say only 200 POSTINGS, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; that's $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5,000 dollars! And finally, 5000 people make 200 postings each with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!

When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR

NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can you afford $5 dollars and see if it really works? I think so....

People have said, "What if the plan is played out and no sends the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOLE who are joining the Internet and newsgroups everyday and are willing to give it a try?
Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!!
Honesty is the key, and the best policy. Make sure you print this article out RIGHT NOW, also, try to keep an eye on the newsgroups to make sure everyone is playing fairly.
REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!

<< By the way, if you try to deceive people by posting the messages with your name on the list and not sending the money to the people already on the list, you'd be wasting your time.
I talked to someone who did that and only made $150 dollars, and that was AFTER seven or eight weeks! He decided to send the 5

$1 bills, and in 4-5 weeks, he had over $10K. >>

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE
WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!

GOOD LUCK!

Hello and thanx for reading this message.

I have a mint condition Kenwood TM 733   2m/440 dual band
50/35 watts, with detachable face.

Included is the $100.00 separation kit, external duplexer, external
speaker, and mobile antena (dual band), new $15.00 packet data cable
(1200/9600 bps capable), original box, and manual.
  I still have the registration card in the box.

I am asking $550.00 obo. I am a very motivated seller, and this would make a great Christmas gift!

Hi all,

I run a mailbox using the fine LBBS 0.18B written by Darryl Miles and have been trying to contact him with a couple of problems, but he doesn't appear to be around anymore.

If anyone can give me his *current* email address, or, help me with the following points, I'd be appreciative.

1. There seems to be a problem with the bbs-inject program when some R-lines that include mixed alphanumeric fields. Notably, there are four Dutch stations along the lines of call@bbs.ZA2.NLD.EU where the 'ZA2' whatever causes the bbs-inject to stall, leaving a lock file behind. This happens everytime and means my spool directory grows and grows. Ihave to manually 'adjust' those lines, and it works again.

2. My forwarding partner has upgraded his system to NNA 3.01. Although our forwarding appears to be fine, I understand there is a potential problem, and that a new version of LBBS has a fix. This *could* be a fix for the suspect FBB Compressed Forwarding rather than

   specifically for NNA though.

Any clues?

Steve

FYI FBB for Linux should be available soon, and unlike Darryl, Jean-Paul is:
i) contactable,
ii) willing to listen to good ideas.

>If anyone can give me his *current* email address, or, help me with the
>following points, I'd be appreciative.

<RANT>
Darryl is *very* difficult to contact, and does not offer good support for
his BBS which is unacceptable, he should release the source code and then
you would have a number of experts within a short period. Bugs would be
fixed better too.
</RANT>

I suggest you subscribe to the Linux-Hams mailing list as that is the
primary support forum for Linux and amateur radio, there are a number of
LBBS users on there.

To join it, send a message to Majordomo@vger.rutgers.edu with the body of
the message containing:

subscribe linux-hams
end

Then send your request to linux-hams@vger.rutgers.edu, they're very helpful.

That argument does not have a great deal of validity. Just because
something is free, it does not excuse shoddy workmanship.

This, of course, is the old, familiar argument which is traditionally
used to excuse incompetence and stupidity on the part of RSGB
Committees, QSL Sub-Managers, etc ..... "The people doing the job are
unpaid volunteers", goes the oft-repeated refrain, "so nobody has any
right to complain about unsatisfactory service".

So I hear, and of course I'll take a look at it when it is released.

> Darryl is *very* difficult to contact, and does not offer good support for

That is all probably true enough to say, and I sure wish Darry; would
release the source. Of course, he may be difficult to contact because
he'd rather be busy coding than answering questions about problems which
he's just fixed in the new code ;-)

Thanks for your advise - I've done just that.

Are you sure it's relative to the alphanumeric's - reason I ask is because
a similar thing happen's to one of my boxes running LBBS 0.18B but this is
down to the actual size of the compressed FBB code blocks. Seems that
anything MUCH over 10K gets LBBS really upset with the same results as
you.

Is there a newer version of LBBS, I asked Darryl a while back when the
flock() problem cropped up and he was working on it then but I've heard
nothing since.

As Jonathan says, there will be a Linux version of FBB, which is in beta
now and rather good already. Some nice perl scripts and shared newspools
should be possible.

Cheers, Martin.

Absolutely positive I'm afraid. If I go and edit the message, and change
for instance, '.#ZH2.NLD.EU' to '.#ZHH.NLD.EU' then all carries on ok.
It sure is the numeric next to an alpha. Just to be sure, I even tried
editing it, and then back to how it was originally.

> Is there a newer version of LBBS, I asked Darryl a while back when the

I hear that there is a modified version, that still claims to be V0.18B!

I hear about this. Pity that, apart from the above problemettes, LBBS
does the job I want. It'll be a shame to go to FBB, *but* if I can't get
these sorted, then I will.

Good news.
Fellow surfers, you could order real cool T-shirts or/caps with
a fantastic embroidery on: the graphic is a surfer surfing on www,
embroidered like waves on the sea in the virtual world, the word
cyber-surfer is lively located on the corner of the design. The whole
embroidery creation is just a piece
of art that reflects your spirit and your feeling.(Three colors of the
design will change
according to the colour of your ordered garment.)
     If you want to personalized the garments, please add one dollar to the
price and specify the fonts you like, we will embroider your name on.
     If you do not care about our graphic but want a phrase to be embroidered

such as CYBER-PUNK, PUNK@WWW.NET, WILD NETTER, NET HACKER or whatever you want, just write to us, we will make you excited.

Caps, white, black, blue, yellow, red, purple, green and brown, with ajustable buckle one size fits all.

T-shirts, white, black, blue, yellow, red, ash and natural, with M, L, XL & XXL.

Please give yourself a treat or give your loved one a personalized X-mas gift!

Both the T-shirts and the caps only cost U.S. $7.5/ Cdn $9.5 including postage (even international!)

Please order by mail with check or money order to Power Vision Embroidery Co. The address is:

****

Power Vision Embroidery Co.
101-1600 Adelaide Street North
London Ontario N5X 3H6 Canada

****

Please write your return address as clear as possible for quick delivery.
Thank you.

.policy,rec.radio.amateur.space,

Hi,
  Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them.
   Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I will place the columns I have already published in past issues of our newsletter. Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit old ones or add new columns as write them, and I wont have to send re-posts.

The Cost... I will ask that you do not edit the articles, and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to the address on the page.

Where... http://web2.airmail.net/gerryc/newham.html

Please bear in mind this site is still under construction and not all of them are there yet, but they soon will be. (I have Thanksgiving week off)

73's

Gerry Crenshaw

Hello! I have a VHF model GE Master II that I am currently using for
1200 baud packet. I am interested in using it with my KPC-9612, and
using both the 1200 and 9600 on the same radio. Does someone have a mod
to make it so that the 9600 will work on the same radio as the 1200? Or
does someone at least have a mod that will make the 9600 work? Right
now it is not deviating good enough, although it seems to receive ok.

Please CC any replies to my email address, kb0kqa@computerpro.com

Thanks and 73 - Matt

The problem is that the Mastr II (note no 'e') is a phase modulated
radio, not FM. Thus it can't do the G3RUH/K9NG modulation correctly.
The slickest fix I've seen requires you to replace the transmit Icom
in the radio with a Motorola Micor channel element and FM modulate
that.

The GE Icom just contains a crystal and a temperature compensation
network. The Motorola channel element is a complete oscillator, with

a varactor modulator. Thus it does true FM. You have to rewire the
Icom socket to accept the Moto element. The former GE oscillator
circuit now becomes a buffer stage. You can still feed 1200 baud
to the GE PM modulator, but now you can also feed 9600 baud modulation
directly to the Moto channel element and all is lovely.

Several of us in the Lafayette area are using GE Custom MVP's with a simple
mod to operate 9600 bps using the G3RUH modems. Although txdelay could be
faster (shorter), it seems to work flawlessly.

> Lawrenceville, GA 30244 | |The GE MASTR II that I have
has a complete oscillator in the channel
element. I have found that you can modulate the compensaion circuit in
the channel element and get very good performance up to 9600. Several
years ago I built a small unit using the exciter section of a MASTR II.
The results were very good past 9600. The only draw back is that the
compensation line is very sensitive and requires a very stable DC level
to maintain the frequency. The unit that I built biased the compensation
line at approximately 5 volts DC +/- 1 mV. The " 5 volts was adjusted
to give the best modulation balance. If you need the temperature
compensation as well you will have to sum in the TC to the DC bias.

Hi,
  Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them.
   Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I will place the columns I have already published in past issues of our newsletter. Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit old ones or add new columns as write them, and I wont have to send re-posts.

The Cost... I will ask that you do not edit the articles, and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to the address on the page.

Where... http://web2.airmail.net/gerryc/newham.html

Please bear in mind this site is still under construction and not all of them are there yet, but they soon will be. Some of the URL's arent resolving yet and some in reformating the text are doing funny things. But I am still working on it

73's

Gerry Crenshaw

A recent power outage wiped out the HAM-server database. Unfortunately
this happened during a backup, so I have nothing to fall back on.

It took me several years to gather the programs I had available, I don't
have the time or energy to gather them again.

So, radio pals, HAM-server is no more.

I followed the HOWTO on AX25... and I compiled my kernel with everything it
should need. I obtained the AX25 utils for the 2.0.27 kernel.

axattach /dev/ttyS0 1 produces: TIOCSETD: Invalid argument

then it dies.

Thoughts? It should go like gangbusters, I would think.

Oh... axports:

As a former teleport user I really like aracnet too. They have been
reliable and very good. Unlimited time is nice too..

Chris,

Check out ftp://ftp.ucsd.edu/pub/hamradio/packet
or ftp://ftp.cdrom.com/pub/hamradio

Those are some of the two biggest ham radio archives
on the net

Hello,

I am searching for software to use on a KPC-3 do you know where to find it
or you
have someting by your self you can send it to me thanx

I have a Generic Brand Laptop for sale. It's a 386SX/25 w/1meg ram, 80meg h/d, VGA monochrome monitor and a case to carry it in.
The plug in the back broke, so I rewired another plug which works fine with the power supply I have for it. I also have the same plug connector attached to the car cord I made for running it in your vehicle. Great for portable packet, DX loggings, tracking satellites like I do and any other thing you can think of to use this hand tool.

Asking price is $300 obo and I'll pay the shipping.

You can e-mail me if you need any further info, or leave your number and I'll be more than happy to call you back. If you want to call me, you can anyday but Sunday between the hours of 4pm and 8pm pacific time. 702-453-0821

Thanks all, awaiting reply.

The Terminal program that comes with Windows works fine with the KPC-3.

I'm looking for a good xmitter design to use for packet radio data.
The range needed is about 100 meters. Small size and current use are
the primary requirements.

Any ideas?

Enno, please read my other post and tell me which of the
characteristics that bind socialism to fascism you disagree
with. Socialism requires fascism (or at least the threat of
fascism) in order to enforce its demands on the individual.

>Remember you live in a FREE country unfortunately with a
>president that can act as dictator..... I think Germany and
>Dutch governments are much more democratic than the US will
>ever have.

This statement is symptomatic of the Big Lie of government.
Democracy has absolutely nothing to do with freedom or morality.
A democracy in which the majority consists of bigots intent on
destroying the minority could be just as terroristic and
repressive as any dictator.

>What is a country that prevents CB users to speak with other
>countries?

Your question outlines why, contrary to assertions elsewhere

in this thread, an understanding of these concepts is just as
relevant to Amateur Radio as to any other aspect of life.

[NOTE: Most of my response is simply designed to keep the discussion interesting and, ultimately, relate it back to amateur radio. While I agree with all of the below in regard to individual cases, my personal economic opinions vary pragmatically according to circumstances. I am a proud member of the Democratic party who leans toward social-democracy, but on individual issues, I can also be quite conservative.]

No. Socialism's primary mandate is the nationalization of the means of production. ALL states that produce currency participate in economic control and regulation.

Socialists accept a labor theory of value. This states that the only value in any commodity is based on the labor that went into it. Take, for example, a metal chair. When the metal it was made from was in the ground it was worthless. You might argue that even then it had value. However, the value of the land as a mine is based both on the anticipation that labor will commence there as well as the labor that went into discovering the metal in the first place. The raw material proceeds to finished product by virtue of labor. This labor, and nothing else, transforms something that is valueless into something valuable. In exchange for this the workers receive a wage. Since ALL of the value that went into the object is the product of labor, the wage should equal the total of that labor. Does it? No. Why not? Because this equation has failed to factor in profit. The business

owners (let's posit a large number of stock holders for the sake of argument) do absolutely nothing for society. They have not had a hand in transforming the valueless into the valuable, yet they are still getting paid. How? Because, via profit, they are STEALING value from the workers. Thus PROFIT equals theft, not taxation.

You might argue that the business owners have taken "risk." The Socialist answers that this is utter nonsense. Their risk is essentially nil--only paper, or worse, clicks in an account register. The workers on the other hand risk their lives, the time and value.

People with your mindset have fallen for the great con--the real thieves have deceived you into believing that the so-called government (which is really the collective will of the people) is the enemy when, in fact, it is the business owners. Unless of course you ARE a business owner, in which case you are a thief yourself.

Now, getting away from economics per se, what about "regulation?" Let's use amateur radio as an example. There are no doubt individuals who would like to end all frequency regulation whatsoever. However, this would OBVIOUSLY make the bands unusable. Thus, all of the good things we do in Ham radio, ARES, MARS, RACES, SAREX, Handi-Hams, would be wiped out. To paraphrase Hobbs, in such an environment, our "amateur radio experience" would be nasty, brutish and short. However, we as a people, through our representatives have determined that if we regulate the bands they will be more useful and more enjoyable than if they were left unregulated. Most hams WANT regulation of the ham bands because clearly such regulation is in the best interest of EVERYONE.

Is it really such a stretch to imagine that there might be other areas of life in which such regulation might be desirable? Today I got a notice from my city that I had to trim my tree. The city has an ordinance that states that no tree may have branches hanging lower than ten feet into the street. I was annoyed when I first opened the letter. I don't really have time to go out an trim my tree this weekend. However, on second thought, I imagined one of my neighbors running into the tree and changed my mind. I appreciate the reminder. You might say, "well, your neighbors should look out for the tree," or ""If your neighbors don't like your tree they should move to another neighborhood." Perhaps. But if we extend this logic to every facet of life, your proposal would lead us back to a state of nature something rather similar to that of the Neanderthal in which the physically strong had the RIGHT to oppress the weak. This is the irony of the so-called "freemen." The broad application of their definition of "freedom" would make us all slaves.

Hi Arden,

Now I see it clearly: The capitalist are steeling the wages of
the work force, the socialist goverment does the same, and all
goverments steel our frequencies. How about an amateir radio revolution?
No power or frequency limit?

>>That's extortion.

>No. Socialism's primary mandate is the nationalization of the
>means of production.

Focusing on "means of production" is the method by which the
socialist prevents politically ignorant followers from
detecting his true motives. In fact, his platform is one
that promotes the control and enslavement of all citizens,
producers and consumers alike.

In contradiction to this trickery, Webster's clearly states

that socialism is "a theory of social organization based on government ownership, management, and control of the means of production AND the distribution AND exchange of goods. This definition not only covers every aspect of the economy, but also of the very means by which individuals sustain life.

>ALL states that produce currency participate in economic
>control and regulation.

Economic control through manipulation of the money supply and other means is merely one tool by which socialism empowers itself at the expense of the individual. As a case in point, by printing currency for its own unproductive use, and by refusing to pay its debts in a manner consistent with economic morality, the socialist government exacts payment for its sins through devaluation of existing currency. In so doing, it steals from evey citizen, including the precious "worker" which it otherwise claims to exhalt above all else.

>Socialists accept a labor theory of value. This states that
>the only value in any commodity is based on the labor that
>went into it.

Such theories are demonstrably false and serve only to bring the socialist to power. Their promotion creates resentment and greed within the population, uniting the masses against an invisible and nonexistent enemy.

That said, in your example of the production of the chair, no amount of labor will render it of value if it only has two legs. It should be evident to any rational person that labor alone is not the determinant of its value.

>In exchange for this the workers receive a wage. Since
>ALL of the value that went into the object is the product
>of labor, the wage should equal the total of that labor.

No, the value of the chair is determined solely by its perceived desirability to those able to buy it. In a free society (which is NOT the goal of socialism), the buyer is allowed to determine its worth through his decision to purchase it. Government intervention in this process, through regulation of the availability and price of all chairs, denies the purchaser the right to determine the value of such products for himself. Considering that the purchaser is also a worker, governemnt has thereby forced all workers to buy necessities of life which may have a value far less than what could otherwise be justified, and has rendered those workers captive to a single source. In this way, socialism supports those in power through theft of the workers' earnings.

> Does it? No. Why not?

The Big Lie of socialism is coming up.

>Because this equation has failed to factor in profit. The
>business owners (let's posit a large number of stock holders
>for the sake of argument) do absolutely nothing for society.
>They have not had a hand in transforming the valueless
>into the valuable, yet they are still getting paid. How?
>Because, via profit, they are STEALING value from the workers.

The business owner(s) are entitled to whatever profit
results from the sale of the chair by virtue of the fact
that they have paid everyone concerned for the right to
own it. Because they own it, they are morally entitled
to sell it, scrap it, or use it themselves. They are
obligated to no one.

By pitting workers against business owners (who are
workers themselves), socialism grants itself absolute
control over all citizens. It denies the right of the
business owners to do as they wish with the products they
have paid to produce, and in so doing, it denies the right
of all citizens to the sovereign ownership of property.

>Thus PROFIT equals theft, not taxation.

This is ludicrous. The laborers' hours and wages are the
result of entering into a VOLUNTARY agreement with the owners.
Taxes demand payment from workers under THREAT OF FORCE.

>People with your mindset have fallen for the great con--the
>real thieves have deceived you into believing that the so-called
>government (which is really the collective will of the people)
>is the enemy when, in fact, it is the business owners.

What exactly is the collective will, Arden? Is it the
will of 50% of the people? More? Less? Who compiles the
individual opinions necessary to determine collective will?
Which topics is the collective will based on? Economics?
Politics? Favorite color toilet paper? Who determines the
topics to be considered and their relative importance?

The summary answer to all the above may be stated in one
sentence: COLLECTIVE WILL is constituted solely by
opinions that are formed of, by and for the government.
It is falsely claimed to represent the wishes of people who
not only don't agree, but who are incapable of being
homogeneously defined. It further assumes that those in
government, in their infinite wisdom, know what is best for
their subjects and are incapable of being seduced by the
availability of unearned (and nearly unlimited) money and
power. The irony to this is that creation of unearned money
and power is the sole basis by which socialism survives.

In any event, there is NO such thing as COLLECTIVE WILL. It is merely a tool used to empower government at the expense of the freedoms of its citizens, and it has been used by every tyranny on the planet to subdue individual citizens for purposes of extorting their labor, property and earnings. COLLECTIVE WILL is, in fact, the will of the GOVERNMENT, not the will of the individuals which such governments claim to represent. There are NO exceptions to this in the entire history of man.

>Unless of course you ARE a business owner, in which case you
>are a thief yourself.

You certainly haven't proved it, nor will you.

Before leaving this topic, I want to mention one other thing to U.S. readers. Arden's post presents socialist views that are overtly recognizable as such to many people. However, socialism is an instrument of government that can manifest itself in many forms. Arden's view of a world in which a classless society is governed by an omnipotent government is much nearer, and considerably more likely to evolve in full, than the free society desired by our forefathers. It is the product of those who seek power over others, and our continued refusal to recognize it for what it is will lead to its certain implementation.

I will reply to the section of this post relating to spectrum and Amateur Radio in a second article.

Hold on there, Arden, its not obvious to me. Owning land
without government regulation doesn't make it unusable, nor
does owning a business, a house, a computer, or anything else.
Why couldn't I own, say, 70 MHz to 71 MHz? What would make
it unusable, and why is it reasonable to expect it to be
usable when the government grants it through a license, but
not when I own it outright?

>Thus, all of the good things we do in Ham radio, ARES, MARS,
>RACES, SAREX, Handi-Hams, would be wiped out. To paraphrase
>Hobbs, in such an environment, our "amateur radio experience"
>would be nasty, brutish and short.

Maybe, maybe not. Maybe we would all say the heck with
ham radio, sell our homestead frequencies and retire
to St. Bart.

>However, we as a people, through our representatives have
>determined that if we regulate the bands they will be more
>useful and more enjoyable than if they were left unregulated.

When did we do that? In the U.S., the great majority of
people had no voice whatsoever in determining the use to
which the spectrum was put. In fact, most of the U.S.
population wasn't even aware of the need to make such a
decision, and no representatives were elected on the basis
that they were qualified to do so.

Also, in the U.S., the final result was a mixture of the
desire by the U.S. military to confiscate all frequencies
for its own use, and Congress, who finally (by a narrow vote)
decided the military shouldn't be allowed to accrue that much
power in comparison to itself. Congress won this power
struggle only because of the Constitution of the U.S.

>Most hams WANT regulation of the ham bands because clearly
>such regulation is in the best interest of EVERYONE.

Bullcrap. Most hams want regulation because it provides
them with free spectrum.

>Is it really such a stretch to imagine that there might be
>other areas of life in which such regulation might be desirable?
>Today I got a notice from my city that I had to trim my tree.
                    <snip>

The remainder of this presentation serves only to accuse
the opponents of socialism of being anarchists. While I
believe that is not the case, it is irrelevant to this
discussion and does not represent my own beliefs.

>What is wrong with some economic control and regulation?
>I don't see anything about stealing there.....

Hi Enno,

The answer to your question is not simple, but it can probably
be answered reasonably well by the following:

[What is wrong with some economic control and regulation?]

First, economic control as I believe you mean it is legislated
in the name of "the public interest." Variations include the
"national interest," "public good," "society" etc.

The problem with this is that there is no such entity as
"the public." "The public" is actually only a number of
individuals. Therefore, any law that purports to place the
"public good" above the interests (rights) of private
individuals can do so in only one way - by giving the
rights of some individuals precedence over those of others.
In so doing, the government grants itself the power to deny
the rights of individuals of its choosing, in effect
reducing the rights of all to merely privelages.

If you're still not certain why this is wrong, let me know
and I will attempt to explain a few of the concepts that
differentiate moral from amoral society.

[I don't see anything about stealing there.....]

Irrespective of government-recognized paperwork such as
deeds and titles, ownership is evidenced in part by one's
ability and right to control the possession and use to
which property is put, said property having come into the
owner's possession by moral means. As such, no other
entity can exert control over the property without denying
the rights of the legitimate owner, and without ascribing
the rights of ownership to itself.

Because of this, it is not possible for government to
dictate any aspect of the possession or use of earnings or
property (assuming such use does not infringe upon the
rights of others) without seizing the right of ownership.

Further, as most citizens will naturally resist such attacks on property they own, compliance is usually achieved not by purchase or other moral means, but by threat of force.

So, in direct response to your statement, the government must deny the rights of private individuals in order to control their property. Unless such control is exercised to enforce payment of legitimate debt, it is theft. This principle applies to all forms of economic control.

>If you mean confiscating property I think you are a bit
>confused with communism or some lowlife dictatorship.

Labeling various philosophies as fascist, Marxist, communist, etc. is merely a means of describing the extent to which socialism is employed, and the exact methods by which it is enforced. All these governments share certain brutal similarities regarding confiscation of property and earnings. The underlying philosophy in every case is socialism, and the U.S. has succumbed to it as well.

As a side note, socialism may also be rightly called a form of collectivism, statism or authoritarianism. All are substantially contradictory to the efforts of our founding fathers, and it is important to realize that the U.S. was the FIRST nation in history to ever put them aside in favor of a moral society based on individual rights.

Unfortunately, the U.S. has since managed to screw this up. We are now much like the rest of the world, which has never fully grasped these concepts, let alone put them into action.

Anyway, if you are interested, I will be glad to post an example or two of socialist-sponsored confiscation and extortion in America.

In article <4pieab$nli@news0-alterdial.uu.net>, jhawk@jax-inter.net
says...

>
>Eventually, although regrettably, I also feel that hams will feel the
>pinch of technology sueeezing them ever higher in search of usable
>spectrum. However, I also feel that existing spectrum resources can
>be more efficiently utilized by projects such as LEO.
>
>-Jay Boyer N4RLL

The LEO band-grab seems very reminiscent of the way General Motors bought
out community rail systems in the 40's to make way for a maximum number
of GM products. (To say it's "technology" pushing hams is wrong. It's
good old "politics" pushing us. Goverment is applying it's powers of
imminent domain to current occupants so the "property" can be given to
massive companies and/or powerful individuals such as Bill Gates and
McCaw Cellular d/b/a Teledesic USA.)

The LEO systems are no different, They are a way to make all individuals
pay for access to the radio spectrum on a minute by minute basis. To
portray LEOs as an improvement of spectrum usage is doublethink. While we
hams haven't been the best example of spectrum efficency, commercial
usage has been much worse. (Unless you _really_ think satellite TV
programming has no duplication and represents quality usage.)

I suspect the LEOs application to supplant/replace wireline and
terrestrial telco systems will be a poor usage of our 2m and 70cm bands.
Since the eventual application of this technology is to allow
distribution of entertainment programming (the main use of internet
accesses and the main claim to fame of LEOs) hams will have been
eliminated so mom and dad could use the computer to babysit their little
darlings.

Pretty ironic for ham bands to be eliminated by a technology that hams

pioneered. Especially for such as useless service.

The real mistake we made was to remain (relatively) silent when 220MHz was taken, or when the spectrum sales started. We should have aggressively pushed the idea that spectrum access was more like water rights rather than private property ovnership. The die has been cast. I predict the loss of one of the two bands this go 'round. The process will eventually continue from our lowest kHz to our highest MHz as we hams can't justify free access to such valuable "property". We're obstructing _someone else's_ earning a living.

One thing I've wondered about: when these companies "buy" a slice of spectrum, how do they write off the purchase on their taxes? Is it by the ACARS method or lump sum? Is it considered "real" property or just an intangible assett? (I don't really believe that all the purchase money goes and _stays_ in the treasury. I bet it's written off and we're not really getting _anything_ in real compensation for our losses.)

There seems to still be disagreements among historians and scholars as to the general attitude of the German population during this time. However, your point is well taken.

My first wife was German and I was got married there. Her father and two brothers served in the German Army, Air Force and Marines and were all captured. By mere coincidence, they all arrived home on the same day. Her father worked for the Bundespost (German Post Office). None of the family ever belonged to any of the Nazi organizations (which was difficult as government employees were expected to). None of them shared the Nazi ideals. They did have the required picture of Hitler and a copy of Mein Kampf, but they were only brought out into view if they had a visitor they did not know or trust.

During the war, Jewish prisoners were used for maintenance around their apartment building. It was obvious they were not receiving sufficient food. My ex-parents-in-law would wrap up food and put it the garbage cans for the prisoners. If they had gotten caught it is quite possible they would have been killed. Not ever having
gone through something like that, I cannot imagine how much courage it took to perform an act that could easily end up in death.

Anyway, certainly not all Germans were accomplices of the Nazis

And, it still amazes me that folks keep overlooking Josef Stalin who had 20 million people killed, over three times the number in the Holocaust.

73 and auf wiederschrieben,

What a funny song Burt, did you do all that yourself? I am glad Ham radio is American, because America is the great melting pot and people from everywhere in the world can own a piece of the action. Isn't that just grand? German Americans can talk to other Germans, The sky is the limit with ham radio. I never realized just how far reaching and impressive it really is. I am amazed by how many participate in this, and how much it just keeps growing. I also never knew about the activities until my friend got into it and now his wife does too. They are always helping with something cool. I like hearing their stories.

This is just too cool.

Collette

Ham radio is so unappealing to the young:

1. I offered 14 year old KA1VBQ $10 to make a single 2 meter contact,
she refused.
2. I offered N1XIY free GOOD 2M and HF gear, he is 16, he refused to
use it.
Electrolux and ham radio both have something in common, what?

Burt

The Victor
By: C.W. Longenecker

If you think you are beaten, you are.
If you think you dare not, you don't.
If you like to win but think you can't,
It's almost a cinch you won't.
If you think you'll lose, you're lost.
For out in the world we find
Success begins with a fellow's will.
It's all in the state of mind.
If you think you are outclassed, you are.
You've go to think high to rise.
You've got to be sure of yourself before
You can ever win a prize.
Life's battles don't always go
To the stronger or faster man.
But soon or later, the man who wins
Is the man who thinks he can.

Gee, Burt, you'd think that after all the good words about Ham radio you
have to say, your own daughter would be interested:

```
KA1VBQ             FISHER, SAMANTHA A                       LIC ISU 24-APR-1990

Hmm, KA1VBQ's distaste for amateur radio has been stated many times by her father. Perhaps she felt no one would talk with her courtesy of guilt by association with K1OIK.

I have no idea as to why N1XIY refused the equipment, his license is less than a month old. I am reasonably certain however that K1OIK had no part in assisting Abram obtain his license. Perhaps he did not like the assumed motives of the gift-giver.

K1OIK has been trying to sell his gear for a while now but apparently no one wants to deal with him. That doesn't suprise me considering the tact and reasonability he has displayed in the venues where he has attempted to promote a sale.

There are numerous charitable agencies that will accept the donation of the equipment and provide a tax deduction for K1OIK. An added plus for K1OIK would be he would not have to deal with any of the hams that he finds so distasteful.

Burt Fisher <k1oik@ccsnet.com> wrote:

>Electrolux and ham radio both have something in common, what?

OH BOY !! A Burt-a-Riddle from our resident HAM-A-ROID !!

Let's see, Burt, let me think about this for a second or two.

Electrolux has vacuum cleaners.
        and
Ham Radio has Burt.

So if those two statements are both TRUE, then the obvious

conclusion would be:

Vacuum cleaners suck.
      and
Burt sucks.

So there's your answer Burt. Electrolux and Ham Radio both have
something that SUCKS !!! Gee, I love a good Burt-A-Riddle.

Here's one for you Burt. Did your mother have any normal children ?

Besides that, maybe both those kids are smarter than you think. Maybe
their mothers told them never to take candy (or ham gear) from
wierdos. Could that be why you can't 'Give it away' ?

73, Jim KH2D

Burt Fisher <k1oik@ccsnet.com> writes:

>The best selling book, "Hitler's Willing Executioners" by Daniel Jonah
>Goldhagen tells the story of how ordinary Germans (like hams) allowed
>the holocaust to take place. The author shows the ingrained deep hatred
>for Jews that Germans had for Jews before Hitler came to power and that
>there was a widely held shared view that the the Jews ought to be
>eliminated in some way from German society.

This is not correct. In fact, there was a hate against Jews in nearly
all countries of Europe before 1933, but it was limited. There were
many problems in Germany at the time Hitler came to power. They were
not more related to Jews as to anything else, but Hitler used the latent
hate in order to find an explanation of the problems of the time. Hitler
proposed himself as the saver from all the evils, his solution was
simple: all the problems came only from the Jews, therefore they have
to be discarded (later: eliminated). Hitler's hate against Jews IS NOT
the reason why he was so popular in Germany all the time, in all the
parts of the society. These reasons are more complex.

He JAck !

Do you really think - that the US constitution . or something
in your mind is the only garant for a stable democracy ?
Wonna heal the world by dictationship of rulez ?
Poor US people ....
Maybe you still haven`t discovered that there are some kinds of
Law-systems in the world ???
And I think - that the national oriented parties in germany are -
compared to the US republics - really harmless and social
oriented parties ...
You cannot compare the situation in the States (without having any
idea of foreign history -) with other countrys.
And the education - your government and TV applys to you - may not
equal the present situation in any country.....

Socialists :

This party is the reason why we have a good social system in our
countrys - which cannot compared in any case with that one in the US
....

Hi Wolfgang,

The names of German political parties do not concern me.
I must admit, however, I have not seen the word "socialist"
in the name of a party that did not practice it.

>Do you really think - that the US constitution . or something
>in your mind is the only garant for a stable democracy ?

No. The U.S. Constitution was flawed in its creation and its
inadequate protections have since been further weakened. As
for something in my mind, intellect is the only means by
which man achieves morality.

>Wonna heal the world by dictationship of rulez ?

Yes, rules which I call "moral law".

>Poor US people ....
>Maybe you still haven`t discovered that there are some kinds of
>Law-systems in the world ???
>And I think - that the national oriented parties in germany are -
>compared to the US republics - really harmless and social

No socialist philosophy is harmless.

>You cannot compare the situation in the States (without having
>any idea of foreign history -) with other countrys.

Perhaps you're right. All I can do is to help others
understand why socialism is tyranny. That's a universal
truth.

>And the education - your government and TV applys to you - may
>not equal the present situation in any country.....

I agree. Socialism is practiced in many different ways.

>Socialists :
>
>This party is the reason why we have a good social system
>in our countrys - which cannot compared in any case with
>that one in the US .....

Social order was also strictly maintained in the Soviet Union,
but not by moral means.

Fascists and socialists both advocate the immoral use of
force against citizens. That's contrary to my views.

>You still deny any knowledge and education which is not made
>up in your own brain

I deny only those concepts which cannot be proved to be moral
by logic and reason. Morality requires purity, therefore all

manifestations of government power that cannot be proved
moral (or can be proved immoral) must be discarded.

>Did you ever visit a (normal) library ?

I don't know. Maybe they were abnormal and I just didn't
realize it. ;)

>The hostile power of the (european) socialists are the christian-
>democrates - an enforcement in this direction are the nationalist
>an some parties (very small one) which have a little bit the touch
>of have historical connections to the Nazis.

Socialist control was the means by which the Nazis first
violated the rights of German citizens. That is the
connection to all modern German parties (and others).

>Maybe this nationalist may be compared with the US-republicans -

Yes, I see similarities.

>Where are you standing, Jack ????

My position will be clarified if you read the articles
and replies I have posted to Rec.Radio.Amateur.Policy.

She used to go on the air on my birthday just to please me but
after a while she would rather do anything than talk to hams.
She says WORSE things, by far, than I do about hams. She turned
me off the HOBBY.

When I show ham radio to kids I am positive about it.
I let them come to their own conclusions.
They like me fine if I do not push ham radio.

You are right,Burt. I work at a collage and young people are not only
more challenged by using computers, thay make way more money with the
skills they develop from using computers. Todays life style requires that
they hit the bricks running in order to make a living. Ham Radio no
longer offers thoses skills to a young person. Electronic component level
trouble shooting is for the most part over. Ham Radio was a major feed
for people who went into electronics with this skill. Few school teach
it, and even fewer company want to take the time to deal with it, or pay
fore it. Swap the board is all it takes and the equipment will tell you
what to change. No money in it, us less you work for the government.

The students I meet who get big money, fast, do it in networking
software, not with a microphone. I have out lived ham radio and the
fun of electronic repair and had my electronic career change severl times
to the point that it is not fun now.

I sold all of my ham equipment not because of electronics, but because of
the type of foolish answers to your post, is also the type of foolishness
ham radio has gone to. I know many good hams who have done the same as I
have, an there will be many more to follow.

I will be blasted by many, but I have not even looked at this group in a
long, long time, but your post did make me want to respond. You should
have given them a computer and they would have tore your arm off taking
it. They know what it take to live now, and ham radio dose not provide
it.
 Jim, WA7NDD.

Come on, Burt, don't be silly. You are giving up argumentative territory
by and by, territory that you never really had covered by arguments or
facts, just by hearsay from a book, that poses for a summary of facts,
which it is not, as it selectively ignores all those facts that would have

made it objective .... and a non seller.

To sell, the book had to be sensational, o r in the words of review
published about Goldhagen's book in the British magazine "The Economist":
An irresponsible way of bending facts

.... and certainly not what you would expect from a Harvard professor.

I took the liberty to send you that book review from The Economist by
snail mail.... But then Burt, I would want you to think about this:

What Burt says about Germans,
  tells much about Burt
  but hardly anything about Germans.

Burt, if you have brains between your ears, then stop this thread. You
already transgressed from being a misinformed simple mind into making a
fool of yourself to best of your ability. Only oxen and mules are this
stubborn in holding on to a losing position. I never would have expected
that from an intelligent being.

Siegfried, KB2YVC

Is there intelligent life in outer space? Yes, of course there is,
and testament to that is the fact that they simply not waste their
time with establishing contact with us...

Very good points, which is why I am in favor of the NII proposal at 5 GHz, even though the current NPRM doesn't go far enough in my mind. Hams are in an excellent position to provide NII links, and something like that might breathe new life into the hobby.

Unfortunately, the ARRL will do it's usual short-sighted knee-jerk and try to kill it, even though that will be just another nail in our hobby's coffin.

Jim, does bowling, or stamp collecting, or bird watching, or water
skiing provide a living for the people who engage in those activities?
Where did you get the idea that ham radio was or is a career move ?
Last time I looked, it was a hobby.

73, Jim KH2D

 Jim, WA7NDD.

Yes you are correct the very same student who had no use for
ham radio would kill for a computer.

The hams here think they really have something in this hobby.
But real people with a life and a thirst for knowledge know better.

Burt,

You miss the point. This is an amateur radio newsgroup. It isn't
dedicated to politics or to your desire to insult Germans. Why don't you
take it elsewhere since it seems quite obvious that you are annoying most
folks? Perhaps that is your sole intent. It must be satisfying to you
to know that the only thing you're known for is upsetting folks.

I suggest you use your time to do something constructive with your life.

Dave OH2/K8MN

This does seem to be one of the major problems of the amateur radio
service today, too many people can't tell the difference between it
and stamp collecting or bird watching or water sking. To these benighted
souls, it is "just a hobby", of no value to their nation or themselves
beyond a simple passtime.

Come on, Gary. How many lives have you saved lately ? I'm not your
Congressman, nor do I work for the FCC. You don't have to use the
'service' line on me. The closest ham radio comes to being a service
is that it is self-serving. Some benighted souls get so engrossed in
thier hobbies that they confuse them with services or professsions.
Anybody who wants to save lives should join the volunteer fire
department and skip ham radio.

x-mailer: Mozilla 2.01 (Win95; I)

Thank you for reading and considering this happy request...

Our boy, Parker Douglas, was born on June 20th at 2:17 pm.
He is a happy, strong blond haired kid with a twinkle in his eye
and a snap in his step (or cry). He has a bright future also I'm
told when I prey for him at night.

SPECIAL REQUEST: Could you be so kind as to find the front
cover or page from Thursday, June 20th's newspaper and mail us a copy?
Be sure to sign it with your NAME, CITY & STATE AND COUNTRY.
It may be alot to ask, but it would be so nice of you to help with this.

If you have a couple of Email pals from around the world, please forward
this to them. The more remote and unusual the better.

I plan on presenting them to him when he is old enough to appreciate
how nice people around the world can be. How complete strangers
from acroos the world saluted his birthday in this small way.

This small but meaningful request will be remembered for generations
to come, and I thank you if you want to be a part of it.

May my son and you be always blessed.

Parker Douglas
20506 Riverside Pines
Humble, Texas 77346
United States of America

THANK YOU VERY MUCH!

P. S. If you find this an intrusion, I apologize. Sometimes I think
people on the net are far to serious--but I appreciate your right to
privacy.

Jim,

Not to take anything away from the wonderful job that many volunteer
organizations do for public safety (which does include amateur radio).
However, amateur radio is SO much more than just saving lives in order to
fulfill a service. There such things as weather watches, public services in
events (MS society use hams in some of its functions). Not to mention
supplying "backup" communications in times of disasters.

Is amateur radio a hobby...yes and no. In order to prepare ourselves, our equipment must be checked, procedures tested, people trained. The best way of doing all these thing is to use your equipment and skill at all times. Therefore, after a while it does appear to be a hobby since all that we appear to be doing is taking with each other. However, in reality we are just preparing for the day when we might be call on to provide assistance.

Yes, there some hams that do take themselves to seriously...name me a hobby that does not have these. However, on the whole I have found hams to be willing to share their information and enthusiasm with people would are interested. Those people not interested in this service/hobby should not be bothered. Not because we are snobs but rather it is the correct and polite think to do (IMHO).

Not all of use can become volunteer fire fighters, but still wish to serve the public. There are many ways that this may be done...amateur radio is just ONE of those ways.

If I try to use my old DX-440 with batteries it seems to power down (takes a few seconds). The LED slowly just fades away after I hit the power button. Acts as if the batteries are dead. I have replaced both the "D" cells and the "AA" cells. AC adapter works fine (though it has that "buzz" DX-390 owners are currently discussing on this NG). I have broken it apart but can find no obvious problem. Any suggestions?? Feel free to e-mail me direct if you think you can help.

By the way...If you need a manual for one of Rat. Shacks radios they have them available at their Web site for downloading. Can't remember the web address but a search will bring it up.

There is a direct lifesaving aspect to the service, though that is
not primarily what I meant. I have had occasion to do just that,
however, when a trucker ran off the road, tore up 100 yards of
guard rail and was impaled by a piece of it in his cab. It was
late, there was no other traffic, and if I hadn't come along right
after it happened and called the rescue squad, there's a very good
chance he would have died.

But our service encompasses much more than that. Sticking only
with the public service aspect for a moment, there are the
thousands of messages and phone patches I handled for our
servicemen during the Vietnam War. Now few of those were directly
life and death, but they were surely important to the people
for whom they were made. That was of value to my community and
nation (helped the morale of our troops if nothing else).

But if you think our designation as a service only encompasses
emergency messages or health and welfare messages, then you
are sadly mistaken. Our service has four distinct charter
purposes.

Every time I chat with a foreign amateur, I mean really converse
with them not just try to extract a postal card in order to count
coup, I do my tiny bit to increase international goodwill as required
by our service's charter.

Every time I get a new circuit working, and share the results with
others, I do my tiny bit toward the self-training and advancement
of the art our service's charter requires. In fact, every time I
can answer a question on the air, I do a little bit to help the
self-training and advancement of the art aspects of the service.

This is a service our nation expects from amateurs, to increase
the general technical literacy and skills of our numbers. That's

important to the nation because we live in a technological age,
and the more persons in the population who gain a working grasp
of some of that technology, the better we can function as a nation.

And every time I log onto the packet network, or fire up the HF
rig on 20m, I serve as a test load on the system, stressing it.
Dr. Rohde credits amateurs with the improvement found in military
and commercial receivers because only the amateur bands routinely
put the sort of stress on the strong signal handling and selectivity
of those receivers that the military would face in wartime.

We're the world's largest beta test organization for communications
systems, and we not only do it for free, we pay for the privilege of
doing so out of our own pockets. Because we are demanding, and have
some technical skill and knowledge, we quickly identify flaws in
equipment offered to us, and if we don't come up with fixes ourselves,
we spur the manufacturers to do so thanks to the competitive marketplace.

No other radio service can duplicate those things to the degree
which we do as amateurs. That we don't have to be paid to do it,
and that we actually *enjoy* doing it in many cases, is just
gravy. Bird watchers and stamp collectors don't provide those
sorts of services to their nation or their communities. They
just fill idle time with their activities. If that's all you
do in amateur radio, then you are indeed not providing a service,
and probably should be collecting stamps instead of occupying
valuable spectrum.

Oh, and I *have* been a volunteer fireman too, and a member
of the rescue squad, not that those activities are related to
amateur radio in any way except as other services to the
community. We all have a responsibility as citizens to try
to make a difference, to improve our communities and our
nation. Sometimes we do that through direct actions, and
sometimes we do that merely by improving ourselves. The
latter often receives far too little recognition as being
of value to the community and nation. Every little drop
of water contributes to the flow of the river.

Gary

I agree with you.
How does that make you feel?
Hams serve their own fat butts.

And with all this mumbling about commercial LEO satelitte systems, I'm
just so proud that I spent lots of dollars and two or three years
helping UOS do beta tests. Could turn out that the all the pacsats
should be sporting bumper stickers that read:

'I've Been Screwed Before, But it Felt Better'.

>Gary

OK, Gary, that's a description of what you do, and why you feel you
are performing a service. What percentage of hams do you feel fit
into the same catagory as you do ? I honestly think that a very small
percentage of hams participate in any type of public service activity.

In our local community here, that percentage is zero. Of the hams I
know in the U.S., none pass traffic, none do phone patches, and none
participate in any communications support activities for the public.
If I see a traffic accident or someone broken down on the road, I
call it in too, on my cellular phone. I will admit that I attended a
few marathons here a few years back when hams were supposed to
be providing communications support, but the activity was such a
disorganized mess, that I and a bunch of other hams felt we were
wasting our time standing on a street corner with an HT. So of all
the things you mentioned, Gary, I can only say that I personally have
been a beta tester, and as I mentioned previously, that may be for
the good of the public, but if the people who say the sky is falling
are correct, it didn't do much for the hobby.

To me ham radio is just a hobby. I don't feel at all committed or
obligated to anyone, as I passed the test to get a license and I
paid for all my own equipment. I'm sure there are lots of hams who
feel it is a service, but I am also sure that there are lots of hams
that feel it is a hobby.

If the FCC asked me tommorrow to answer one question,
'What have you done to justify the existance of Amateur Radio' ?,
I honestly would have to answer 'Nothing'. Unless passing out
30,000 QSL cards can be condsidered 'international goodwill'.

Maybe we were a while ago. Today we pale by comparison to the millions
of computer beta testers. And one cannot say that there is no technical
skill and knowledge involved in dealing with computers. Also one does
not have to learn an outdated mode of communications to prove their
prowess in the computer world.

Millions of beta testers?? Maybe if there were some quality and a little
alpha testing, those of us in the indusry wouldn't have to be "beta" testers.
I can tell youafter 25 years in computers there is really a shortage of true
technical skill and knowledge out there. Sure there is a lot of hear-say and
nay-say, but very few people have the knowledge to do anymore than regurgitate
what someone else has done. Many people have successful computer careers and
know little or next to nothing about them or how they work, only what they have
"learned" to pass a certificate or some such. Gone are the days of knowing
ebough about something to actually understand and fix it.

Maybe some should learn outdated information as this often is the knowledge
base for the technology of the future. There are certainly a lot of high
ranked business people out there who know enough of the buzz words, but very
little of the actual technology....

Do you think it's that different in the electronic technology field. Heck it's

the
same in any field. There are those who excel, those who follow and those who just fall by the wayside. If there are so many great "beta testers" in ham radio then why is there so much crap being sold. When is the last time that any of the big three ham radio manufacturers put out a handheld that didn't suffer from extreme intermod. Other than a couple of mobile vhf radios all the others have front ends looser than a hookers crotch. VHF/UHF radios have become basically scanners with ham bands thrown in as an afterthought. And sure some of the newer HF rigs have introduced DSP, but other than that I haven't seen a rig worth giving up my ICOM-735 for. And even the new higher entry radios have some serious flaws that indicate pretty shabby "alpha" or "beta testing or very poor quality control.

All I'm saying is that we are living an illusion if we think ham radio reigns supreme over all other technology. And to those who do think we are better then I ask why is this hobby not growing at the pace of the computer hobby? Obviously there are a lot of people in that industry that are on the cutting edge of technology.

I love ham radio and wish that I could find some group in my area to
administer the Technician test so I can be licensed! What do you mean by
placing those overprivelaged snobs in a group with the
</BLINK>NORMAL</BLINK> people. I'll be happy to take a 2M!

Does providing communications on 2meters for a search and rescue operation
for a little girl that was abducted seem self centered?? The volunteer
fire dept was there. However the 900 MHz system that the city was using
would not work in valleys. The city officials were only carring excess
bagage. Their radios could not communicate. The hams could. The
hams were asked to provide help with communications because the
"official" comm system would not work.

This does not sound self centered to me. It sound like saving
the bacon for thr city.

PRESS RELEASE - PRESS RELEASE

Phantom's Amateur Radio Group, Portland, Oregon Phone (503) 818-PARG

ATTN: All Newspaper, Newsletter, and Magazine editors (printed or on-line)

The following is an announcement of a local ham radio group catching a person causing malicious interference to a Police department radio system. Please feel free to publish. Send e-mail to "mscott@teleport.com" if you would like an electronic copy of this release sent to an e-mail address. 6/24/96

<START>

  During June 1st, 1996 in Seaside Oregon, where the SEA-PAC ham convention was being held, a group of hams belonging to PARG (Phantoms Amateur Radio Group) were down on the beach front enjoying the annual PARG bonfire. One of the hams (KB7YZS) was monitoring the local Seaside Police Dept. He heard someone cursing and yelling at people. At first he thought it was coming from the UHF side on his hand-held transceiver, but to his surprise it was coming from the VHF side which was monitoring the police.

  He promptly notified everyone at the bonfire to listen. After a few minutes of listening to the person, the members had figured out that the person was up in a balcony, was with 3 or more people and 2 of which were females. They realized this because of key things he said and voices in the background.

  The 4 PARG members in the group (KB7YZS, KB7YZR, N7XMD, and AA7UP) just happen to be most of the PARG Interference Committee. They immediately activated the PARG Interference Committee direction finding operations. They promptly tracked down the interference to a specific location of the Shilo Inn and searched for someone matching the description. After only 5 minutes they saw a group of people on the third floor of the Shilo who matched the description. Then they saw him pick up his hand-held transceiver and speak into it. At the very same moment the voice on the police frequency was saying "Hey, fat ass, yea you in the black pants and the white shirt". While he was saying this on the Seaside Police frequency the members noticed a man wearing those clothes, a little on the heavy side walking directly underneath them.

  One of the PARG members saw a Seaside Police patrol car in the area. A PARG representative approached the officer and asked him if he was looking for a person causing interference to the Police Frequency. He seemed very upset and replied "YES"! The PARG representative then informed the Seaside Police Officer where the malicious interference was coming from. Three other PARG members were on their

way to the third floor when they saw the people (from the room/balcony where the interference was) come running down the stairs and away from the Shilo.

The officer took a report from the PARG representative, including an exact location of the motel room and spoke to the hotel manager. After 2 hours the interference started up again. The Seaside Police Officer went directly to the room the PARG Interference team pointed out and caught the person in the act of doing the deeds.

The above is known to be facts. The above mentioned is knowledge from speaking the PARG Interference Committee members and to a friend of the suspect.

The man who in is question has a call sign of KE6VNU and is from Central California. He apparently was in Oregon for the ham convention. Information indicates he was released from jail only a short time before this incident, the charge he was in jail for was malicious interference to the local police in his area. This obviously did not teach him his lesson. We understand that he caused a great amount of interference to the Sacramento County and Roseville emergency/ public services communications and often identified himself on those malicious transmissions as "The Phantom Jammer". We were told the charge Seaside Police brought against him was "Interference of a police officer in line of duties".

Note: It is an unfortunate coincidence that the malicious interferer used the name "Phantom Jammer". He has absolutely NO association with or relation to PARG (Phantom's Amateur Radio Group), the group which located him & turned the necessary information into the Seaside Police which led to his arrest for the interference. We did not release this information until now at the request of the local law enforcement officials to prevent tainting their investigation.

This was PARG's second year in a row of providing public services during the Seaside Ham Convention. Last year several PARG members apprehended a purse thief (after a brief foot pursuit), returned the purse to the rightful owner, and detained the suspect until police could arrive. PARG also performed crowd control activities at this time due to the large number of people who stopped to watch the purse thief incident.

PARG is the Phantom's Amateur Radio Group in Portland, OR and is Portland's most active VE testing, repeater club, emergency communications, and ham radio group. Please visit our web page at
"http://www.teleport.com/~mscott/dumb.shtml".

PARG, PO Box 1586, Beaverton, Oregon 97075-1586

I know a ham in Jackson, MS. How close are you to Jackson?
Also, if you contact the American Radio Relay League, they can put you
in touch with some volunteer examiners in your area.

>She LEARNED to hate it AFTER talking to hams.
>She hates it FAR more than I do and made me negative on it.

  Then she shows the same extreme stupidity that you do every time
you post here (no doubt, inherited).

  There are many hobbies I consider stupid and a waste of time.
Since I don't like them, I don't waste my time pursuing them, and
I don't waste my time (and that of the fans of those hobbies) by

going onto their newsgroups and berating them for their choice of hobbies.
  I don't miss them and I'm sure they don't miss me.

  Since you seem to hate ham radio so much, if you were very intelligent
you would have long since realized that your time would be better spent
finding other pursuits you DO enjoy and spending your time on them, rather
than engaging in petty sniping and berating those people who like
ham radio.
  You act as though you wouldn't miss us, and I assure you that we
wouldn't miss you (well, maybe a little bit... like one misses a
tooth ache after its gone). It'll be a "win-win" situation for
all of us.

  Around here there are well over 20,000 newsgroups. Certainly
EVEN YOU could find one or two that you would like.

>OK, Gary, that's a description of what you do, and why you feel you
>are performing a service. What percentage of hams do you feel fit
>into the same catagory as you do ? I honestly think that a very small
>percentage of hams participate in any type of public service activity.

  In almost every group, 20% of the people do 80% of the work.
I have done quite a bit of public service work, technical training and
some technical experiementation, and I know quite a few other hams who
have done a LOT of public service work and done more in the other
areas than I have. But I know many hams who don't do much (if any)
work in these areas.
  This ratio also is correct in professional groups, church groups,
civic groups... almost any group. Hams are no exception.

>In our local community here, that percentage is zero. Of the hams I
>know in the U.S., none pass traffic, none do phone patches, and none
>participate in any communications support activities for the public.

  Perhaps you should introduce yourself to a new group of people (and
hams).

>If I see a traffic accident or someone broken down on the road, I
>call it in too, on my cellular phone. I will admit that I attended a
>few marathons here a few years back when hams were supposed to
>be providing communications support, but the activity was such a
>disorganized mess, that I and a bunch of other hams felt we were
>wasting our time standing on a street corner with an HT. So of all

  Perhaps you could make a major contribution by helping organize
this activity.

>To me ham radio is just a hobby. I don't feel at all committed or
>obligated to anyone, as I passed the test to get a license and I
>paid for all my own equipment. I'm sure there are lots of hams who

  Then you are resting on the laurels of those who do provide
emergency comms, public service, technical advancement, etc.
As you say, there are many other hams who feel as you do.
  However, if you look at the regs, it's the technical and service
aspects of the hobby that justifies its existence.
  Fortunately, there have been enough hams (so far) that *will* do
the work so we continue to deserve that justification.
  One of the reasons I work in ham radio public service events, etc. is
that my parents raised me not to be a free-loader.

>If the FCC asked me tommorrow to answer one question,
>'What have you done to justify the existance of Amateur Radio' ?,

>I honestly would have to answer 'Nothing'. Unless passing out

  Fortunately, I wouldn't have the answer "nothing". Many have done more than I have, but I've at least pulled my weight within the hobby and society.
  Of course, your activities are the domain of your conscience and your sense of duty (or lack thereof). To each his own, but we all will suffer or enjoy the consequences.

Curtis, I will agree "setting" one up is no big deal, however try to make

one actually useful..add an enet card to the exisiting modem, SB32, VGA card typical config and do it such that 5 or 6 different programs ALL work, I think you would be suprised how poorly they perform, without reload, reboot, reconfig etc... Better yet try and run some of the more "powerful" software and see how quickly it comes to it's knees..

stuff deleted..

> ready to be used, even though they are preinstalls.

Not to change the subject but after spending the last 5 years in "higher" ed (colleges), I think some folks are better off flipping burgers, as they have little ability to survive inthe real world. They are being taught archaic things, not basics mind you, which they could use, but useless stuff because faculty doesn't want to budge and learn soemthing new or better. There ar exceptions, but for the most part, CS people are graduating without ever looking into a PC or understanding the basics...like EE's used to learn. I agree some stuff is being rushed to market, but that is what the public wants or will settle for.

Stuff Deleted
Once the net-newness wears off, which it will, because it willnot and cannot be everything we want it to be, without a cost that no one wants to bear, computers may go back to being auseful tool, not some status bar for all to belly around to....every needs a whiz bang pentium to surf with like they need a hole in the head....how about some truly fast IO, and don't give me the ATM crap..it'll be years before it is practical if then

Francis, what, prey tell, are 'search and rescue certs' ? Are those,
like, breath mints you eat while you're out in the woods looking for
lost people with your hound dawg, or what ? Do they keep the dawg
from loosing the sent because of your bad breath ?

Just curious. We have regular certs here, and the mint ones, but never
seen search and rescue certs in any of the stores. Course, most of
our rescues here involve the ocean, and it would be hard to eat breath
mints while you were scuba diving, so maybe that's why the never
caught on over here.

Hafa Adai,
Jim KH2D

1) There is enough blame for everyone.

2) What can we do to end this stupidity?

3) Putting all of the rhetoric to the contrary aside, isn't it a fact
   that since the very beginning, human beings *LOVE* to go to war?

Bill

I do not think we started these wars.
I do not think we caused the holocaust.
I do not think we started Pearl Harbor.
I do think those that started it got some but not all of what they deserved.

Guilty as charged ... but with extenuating circumstances!

Even with a ham ticket and a BSEE degree, that describes my VCR. Why?
It seems that setting the time on the darn thing is the surest way to

invite a power outage. Sort of like washing your car invites rain. <g>

Why is it that my $10 alarm clock with a $1 9v Energizer for backup can
go for hours without power and keep at least some semblance of the right
time? But let the power flicker off for a second or two, and it's
"Flashing 12:00" time for my VCR that cost 20-30X as much!

Why do you spam all the newsgroups all the time with this type of SHIT
like you used to do before you got kicked off of rec.radio.swap?

I think it is very important that one not stick a label on "americans"
or "germans" because of acts of their governments in the past, or
perceptions of the present state of mind as a whole. By not
corresponding with people from the country in question, you may never
find your view challenged, because you admit no more evidence.

HAVE AN OPEN MIND!

Lack of an open mind is stifling ham radio!

Dear Mr. Fisher,

In your permanent attempt to be a nuisance to everyone on these
news groups you also quote your MEOL account. Although you
have a commercial provider for your dirty work, you should
have a look at MEOL policies and the responsibilities of
teachers envolved therein:

Mass Ed Online LearnNet Policies

PURPOSE
The purpose of the Mass Ed Online LearnNet is to advance and promote
education in Massachusetts It is intended to assist in the collaboration and
exchange of information among all who are concerned with education.

GOAL
The goal of the Mass Ed Online LearnNet is to promote innovation and
educational excellence for all learners in Massachusetts schools.
To achieve this goal, the network must provide high quality information
and communication resources to the educational community in an equitable,
cost-effective manner, while promoting a safe and secure environment for

use of the network and respect for the individual rights of all users.

USERS
Primary users of the Mass Ed Online LearnNet are teachers, administrators,
and other educators. MCET may permit others to use the network,
provided they demonstrate that this use furthers the purpose and
goals of the network and public education in general.

POLICIES
The use of the Mass Ed Online LearnNet is a privilege. The user is
responsible for what he/she says and does in the online community.
Because communication with thousands of others is so quick and easy,
it is important always to think before speaking and to show respect
for other people and for their ideas.

It is beneficial for all users to keep the network running efficiently.
Each user must take responsibility for keeping down costs and avoiding
system disruption.
(See "http://meol.mass.edu/training/netiquette.html" Netiquette and
Strategies for efficient use).

.....and so on.

Agreed Burt. It's really very simple: Don't create any Peal Harbors
and we won't create any Hiroshimas or Nagasakis.

As far as Dresden or Hamburg goes, lets talk about Rotterdam, Warsaw,
London, etc. etc.

And we haven't even started to talk about theo holocaust.....

Now, no one chatize me for this, ...

BUT ....

If you've seen (or about to see) Independence Day (the Movie) HAM Radio &

CW seem to save the day. After all other forms of communications have failed or are unreliable, the message seems to get around the country that the U.S. has a plan that might save the planet.

Unrealistic .... the fact that we'd be able to fend off an interstellar attack.

Realistic .... the fact that HAM radio might be useful IF all forms of communications do fail.

Just the fact that HAM Radio is EVEN mentioned in a movie is very pleasing to me !!! Let alone save the world !!! To think, someone actually knows that it exists.

Of course, if we had these local and DX bands taken from us, it woudn't do much good. Don't totally compare this to the movie though. Use your imagination in what could happen (i.e. earthquake, tropical storm, tornado, war ?!?) More than likely, ARS operators are capable and willing to help there country (maybe world, depending on the situation) when all other ways of communicating are down.

Ham radio is probably one of the things standing in the way of
the New World Order. Think the New World Order is going to let
us communicate freely world-wide? Dream on.

You must be new here Alex. Burt is unable to hold a "real" conversation so he
does whatever he can to get attention by making outrageous statements. He
never has any original thoughts or contributes anything intelligent.
Considering the sham our educational system is in it won't surprise you that
Burt says he is an educator in his sig line. Just consider Burt challenged in

many ways and ignore him.

At the risk of being redundant, does anyone know if the list for these
freqs include 33cm, and if they do, write your congressman, and tell him
that that would be a great band for LEO, and alothough we'll shed some
tears, we'll be better off in the long run. In fact, no reason to move
SSTV, if they're willing to not interfere with, and accept interference
from LEO equipment. We picked up this band back in like, 1986, I believe,
when all the trouble started. We would be more than happy to shed it. I
personally, believe that SATAN lives in that segment of the band, so if
the feds want it back, they can have it. Tell me it's on the list for
consideration. 73.

You've gotta be kidding! 900 MHz has got more unlicensed
low power services than any other band. They would never
be compatible with satelites. Why can't these guys simply
use microwave? THINK before you write your congressman...

Cheers -- Mark

>Read the book in the subject of this message, it is #10
>on the best seller list and it is really about German hams.
>The book is by Daniel Jonah Goldhagen and tells how ordinary Germans
>cooperated in conducting the Holocaust

And as you're just in the bookstore --- how about looking for a book
that's for sure not a bestseller, describing your own Holocaust, where
Americans were also willing executioners of Franklin Roosevelt in
persecuting, beating up and interning U.S. citizens coming from Japan.
This happened all just for "national security" and so was for sure
properly justified.

Bye,
  Tom (an ordinary German and as a ham - a citizen of the world).

Come on guys, have you ever heard of the concept of "satire"? It
often angers precisely those people who most need to understand the
underlying message. Or perhaps those people get angry precisely
because they *do* get the underlying message, and they don't want
to admit that it strikes a little too close to home.

Perhaps it's time to have another serious discussion
on just what the amateur service is supposed to be about and how
we can continue to justify our frequencies in a rapidly changing
world. But I fear it will just devolve into name-calling. Sigh.

For the record, no, I don't want to see 2m and 70cm turned over to
the LEO operators. But I have to admit that there's more than a
kernel of uncomfortable truth in what everyone has labeled "flame bait".

Phil

PLEASE don't respond any more to any of Burt's bullshit! He has such
a poor life that he has nothing better to do than toss out flame-bait
like this stuff. He is always complaining that Ham Radio and Hams are
worthless, yet he continues to find time to stick around here and
provide this sort of crap. If everyone on the usenets (and he spams
them all) would just ignore him, perhaps he would go get a life (or at
least leave us alone).

Opinions expressed herein are my own and may not represent those of my employer.

Clearly
You jest

LEO use of the existing amateur bands is a second
attempt to grab the bands.

Remember the 220 waste

After they got the spectrum they could not make use of it.

Although amateurs may not have the power to keep a commercial intrest
from stealing our spectrum, we make up a significant portion of the
decision makers, and prospective client base. UPS has not seen any
of my business since the 220 issue.

I would suggest that we as a group, can bring a lot of finacial pressure
to bear, with our pocket books and our recomendations. As we control
or influence to various extents, the purchasing decisions of the market
place and most potential target customers.

A listing of the Companies proposing the LEO allocations in our bands
should be posted and a followed with concerted effort by all amateurs
to boycott, or otherwise negativly impact these companies.

There is only one thing worse than the nazi's, communists and internment governments: A racist people with a supportive government that will lie to you one day then kill you and steal your land the next. Just ask any native north or south american, if you can find one.

I wonder what would have happened if the Souix nation had had nuclear weapons back in 1870?

While no rational person would blame younger Germans for the

holocaust, this comparison between the NAZI holocaust and Japanese internment is a little absurd. While Japanese people were interred, they were not enslaved. They were not processed in factories of death. Their body parts were not used to make lampshades, knife handles and soap. On the other hand, they were allowed to serve in the military through which they were the most highly decorated group in the war. Comparing this to the real holocaust is an insult to Jews everywhere.

On the other hand, I think that the original spammer's castigation of the German people, especially the current generation, was unwarranted. Aside from the Nazi's I see many positives in German culture.

This Band Is Your Band

 (chorus)

 This band is your band
 This band is my band
 From the HI HI clan
 To the blowhard fan
 From one sixty nine meters
 To the farting repeaters
 R F belongs to only you and me

 (verses)

 As I went scanning through
 Through the RF spectrum
 I saw the ham's had
 Totally wrecked 'em
 And, with their meaningless lives shrinking
 The ham's start thinking
 This band belongs to me and me

 So now the hams try to keep
 Something they don't own
 This time they're picking
 At the wrong bone

This piece of spectrum
Belongs to the American Citizen
Ham bands belong to you and me

The best selling book, "Hitler's Willing Executioners" by Daniel Jonah
Goldhagen tells the story of how ordinary Germans (like hams) allowed
the holocaust to take place. The author shows the ingrained deep hatred
for Jews that Germans had for Jews before Hitler came to power and that
there was a widely held shared view that the the Jews ought to be
eliminated in some way from German society. When Hitler, ultimately,
chose mass extermination as the only "final solution" he was thus easily
able to enlist vast numbers of Germans to carry it out.

Of course those Germans NOT alive during World War II cannot be held

responsible. But I refuse to respond to German "CQs" because I feel the mindset of Germans even today would allow a repeat of the holocaust if the only could find another Hitler. This was shown during the recent Gulf war when Germany was the one selling weapons and materials to make poison gas to Iraq.

Surely there are some caring decent German people that would resist another Hitler and another holocaust but there are too many Germans just waiting to finish what Hitler started.

Is there anyone that agrees AND is willing to say so?
I notice that hams rarely will stand up for or stand against anything.

Amazing Burt. You can still write more than one dislectic sentence.
Your nephew Spew will be so proud of you. Could you convert that over to RealAudio so we can all listen to you sing it ?

By the way, are you and Spew planning a march to Washington too ?
Just wondering, I have a freind who is bus driver in Washington and if you two are going to D.C. it would be so nice to have him run into you while you were there.

In <31B99657.7501@ccsnet.com>, Burt Fisher <k1oik@ccsnet.com> writes:
>Of course those Germans NOT alive during World War II cannot be held
>responsible.

Germany's actions re: the murder of 10 million people, was inexcusable, and unspeakably evil. However, I call to your attention the fact that Germany has admitted its guilt, and has tried to attone for it. This is more than many other countries, which also engaged in deplorable behavior, have done. No point in naming them, or getting into a debate about the relative evils of their actions.

Amateur radio is an international fraternity that should transcend individual politics and ideology. You can't promote brotherhood and understanding if you simply refuse to talk to people.

Your decision though.

>However, I call to your attention the fact that Germany
>has admitted its guilt, and has tried to attone for it.

Acknowledging guilt is grossly inadequate to reconcile what
the Nazi party did in terms of the country's ongoing liability.
Germany is still governed by socialists and despite the horror
of their history, they have not formed a constitution capable of
preventing such atrocities in the future. For the present
government to merely understand and admit that the genocide
committed by the Nazis was wrong will be of little comfort to
any future victims.

>This is more than many other countries, which also engaged in
>deplorable behavior, have done. No point in naming them, or
>getting into a debate about the relative evils of their actions.

In every instance, such atrocities have begun with government
refusing to recognize "lesser" individual rights, as well as its
responsibility to protect them. The lesson that should have been
learned in Germany is that government must be constitutionally

prohibited from using its power for any purpose other than the protection of individual rights. That is its *only* moral purpose, and every government in existence, including the U.S., remains in violation of this principle. For all nations not to have corrected this in the aftermath of such horrendous human suffering is a crime in itself.

>Amateur radio is an international fraternity that should
>transcend individual politics and ideology.

How does one transcend genocide? Individual politics and ideology are the determinants of one's morality. Isolating Amateur Radio from this arena only serves to expand its presence into countries where the technical training to which we are a party becomes a tool for government oppression. No fraternity can possibly be claimed to exist under such conditions.

Not (exactly) true. The current constitution, written with the guidance of the allies, prohibits any German military action outside germany. This provision was written in to prevent Germany from ever again engaging in offensive warfare and conquest. However, you do have somewhat of a point, Jack. The current constitution is weak in the most critical area - preventing hate crimes. Yes, Germany is governed by Socialists. Lets not forget one thing: Hitler was a facist.

Men have the innate right to resist theft and coercion.
Socialism forces their compliance in contradiction to that
right by whatever physical means are necessary. It makes
no difference whether the enforcement occurs through the
courts or by occupation of the streets with thugs. All
who oppose the demands of government, regardless of the
immorality of those demands, are dealt with by force.
Anyone who can tell me why this isn't fascism, please
step up.

As to the new parties, they are related to the old by
their continued inability to divest themselves of the
aforementioned characteristic.

Ken, government should NOT be in the business of
prescribing punishment on the basis of one's beliefs or
opinions, even when they're obscenely offensive. This is
not the problem with the German constitution and I
consider it an exceedingly dangerous precedent in the U.S.

>Yes, Germany is governed by Socialists. Lets not forget one
>thing: Hitler was a facist.

Ultimately, all socialists are fascist and all fascists are
socialist. The distinction between the two is solely a
matter of perception. It has no effect on the violation of
rights that each system requires in order to survive, nor
the fundamental belief inherent to each that the state is
superior to the individual.

>> For the present government to merely understand and

I'm not singling out Germany in my denouncement of socialism
and government atrocities. However, the Nazi Party serves
as an example of some of the most horrendous crimes ever to
be committed by the socialist mindset. If any country in
modern times ever had a reason to research the fundamental
errors in government that have allowed such crimes to be
committed, and to forge a constitution that distinctly
defines and restricts the moral purposes to which government
power can be put, it is Germany.

If this is the stupid taxation is theft argument, then every democratic government in the world that imposes taxes, including the USA, must have a fascist government.

> As to the new parties, they are related to the old by
> their continued inability to divest themselves of the

Oh, really? What turnip truck did you just fall off? Socialist goverments use exactly the same laws as every other form of government to make people pay taxes, etc. It's not as if Americans, for example, weren't forced by law to pay taxes.

> >Yes, Germany is governed by Socialists. Lets not forget one

This is just plain wrong. I don't know whether from ignorance or design, but socialism is NOT fascism. It's not a matter of perception, it's a matter of fact. Socialism, if anything, is the opposite of fascism.

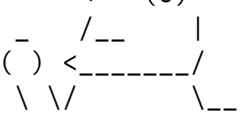
Equating socialists with nazis is a lie worthy of Joseph Goebbels himself. The Nazis are not, were not socialists, they were fascists who spent a good part of the thirties and forties murdering socialists

whereever they could - like Spain, for example.

Calling themselves National Socialists didn't make them socialists any more than Communist East Germany was Democratic because they called themselves the German Democratic Republic.

There have been socialist goverments in Britain, Holland, Sweden, Australia, New Zealand, and many other countries. None of them have ever been accused of behaving like Nazis with the slightest credibility.



As the son of a father who fought real Nazis while in the Dutch underground, and a mother whose family concealed a Jewish family in her attic in Utrecht for 2 years while the Nazis and their allies hunted for them - I and my family know what Nazis are, and the difference between them and socialists.

You are either woefully ill-informed or a terrible liar.

Followups directed to alt.bizarre.

I believe the sentiment of most falls in line with the old expression

"It's the way it's always been - I don't wanna change!"

Eventually, although regrettably, I also feel that hams will feel the pinch of technology sueeezing them ever higher in search of usable spectrum. However, I also feel that existing spectrum resources can be more efficiently utilized by projects such as LEO.

>FYI: The socialist part of Germany was discontinued a few years ago.

I think you and WB3U are using equivocal terms in English. Unlike the German usage, in English, "Socialist" can and usually does refer to social democracy. This probably comes from the usage of the Fabian (social-democratic) society in England. When one is referring to a Marxist movement, one usually simply calls it "communist" or tacks on the appellation "Marxist" as in "Marxist Socialism." Thus, the demise of the DDR and the SED are irrelevant to the post above.

On the other hand, while the SPD (a "Socialist" party in English) certainly has a lot of power and is responsible for many German policies (the better ones IMHO), it is only the number two party at the moment and, contrary to what WB3U said does not "govern" Germany.

Furthermore, WB3U's idea of equating National Socialism with either Social democracy or Marxist Socialism is utterly laughable. While the original NSDAP (National Socialist German Worker's Party or Nazis) as founded by Anton Drexler had some elements of Socialism at the beginning and the Sturmabteilungen (SA or "Stormtroopers) were recruited from the working class with promises of a more equitable future, the fact remains that the NSDAP was the avowed enemy of social-democracy and Marxist socialism alike.

After the SA had served its purpose, it was disbanded and its leaders executed in the "Night of the Long Knives" on June 30th, 1934. The unions, bulwarks of socialism demanded that the NSDAP honor workers by making May, 1 (workers' day) a national holiday. Hitler agreed they forcibly disbanded the Unions the next day. Other seemingly socialist policies supported by the NSDAP such as the "Strength Through Joy" program, for which the Volkswagen was created, were only used in propaganda and never actually put into practice. Finally, National Socialism violates the cardinal principle of both democratic and Marxist Socialism, "the nationalization of the means of production." Under the NSDAP, the factories remained in private hands and made a profit. Thus, ironically, Marxists see Nazism as an extreme form of CAPITALISM! WB3U's post could have easily been posted by a Marxist as long as he did a simple "search and replace" exchanging "Capitalist" for "Socialist!"

As you will discover if you persist in this debate, saying it
and proving it are two very different things.

>If this is the stupid taxation is theft argument, then
>every democratic government in the world that imposes taxes,
>including the USA, must have a fascist government.

This seems to be a reiteration of what I've been saying.
Unless you agree with me, you should consider rephrasing
your statement.

>> As to the new parties, they are related to the old by
>> their continued inability to divest themselves of the
>> aforementioned characteristic.

>Socialist goverments use exactly the same laws as every
>other form of government to make people pay taxes, etc.

Are you saying that because many governments do this, it
must be morally correct?

>> Ultimately, all socialists are fascist and all fascists are
>> socialist. The distinction between the two is solely a
>> matter of perception.

>This is just plain wrong. I don't know whether from
>ignorance or design, but socialism is NOT fascism.
>It's not a matter of perception, it's a matter of fact.
>Socialism, if anything, is the opposite of fascism.

Nyet, Robert.

Socialism and fascism both subjugate individual rights to
the state. They both replace those rights with limited
privelages. Both use force to subdue citizens who attempt
to exercise their rights in contradiction to the state's
claim that they don't exist. Both contend that the whole
is more important than the individual. Both operate on the
premise that the end justifies the means. Both steal from
those who own, and from those who earn.

I'm sure you can tell me which of these you disagree with?

>Equating socialists with nazis is a lie worthy of Joseph
>Goebbels himself.

You keep talking about lies, but you haven't presented
any logical basis for that claim.

>The Nazis are not, were not socialists, they were fascists
>who spent a good part of the thirties and forties murdering
>socialists whereever they could - like Spain, for example.

Socialists have no morals. Given the power, they'll murder
anyone in the name of the state, including other socialists.
Of course, some socialists only have the power to lie, cheat
and steal.

>Calling themselves National Socialists didn't make them
>socialists any more than Communist East Germany was Democratic
>because they called themselves the German Democratic Republic.

That's a good point. You realize that East Germany and the
Soviet Union were both socialist, right?

>There have been socialist goverments in Britain, Holland,
>Sweden, Australia, New Zealand, and many other countries.
>None of them have ever been accused of behaving like Nazis
>with the slightest credibility.

It is my considered opinion that overt acts of public mass

violence are not required in order to accurately describe a government as fascist.

>As the son of a father who fought real Nazis while in the
>Dutch underground, and a mother whose family concealed a
>Jewish family in her attic in Utrecht for 2 years while the
>Nazis and their allies hunted for them - I and my family
>know what Nazis are, and the difference between them and
>socialists.

My family members also fought the Nazis, although their acts don't compare with the courage of your parents. You can believe me when I say that I have the utmost respect and admiration for what your parents did.

Let me ask you a few questions, Robert.

1. At what point in the denial of individual rights by government do you believe that socialism changes to fascism?

2. Do you believe that violence is required to fulfill the definition of fascism, and if so, how much?

3. Do you believe that democracy, in and of itself, prevents fascism?

>You are either woefully ill-informed or a terrible liar.

Actually, I AM a terrible liar. I've never been any good at it at all.

With all due respect Arden, you've read much more into my
posts than was intended. I have no desire to dissect the
inane perversities of the various socialist sects, nor do
I find such scrutiny necessary in order to accurately
describe their members as thieves and extortionists.

> there was a widely held shared view that the the Jews ought to be
> eliminated in some way from German society. When Hitler, ultimately,
> chose mass extermination as the only "final solution" he was thus easily
> able to enlist vast numbers of Germans to carry it out.It is certainly true,
that lots of Germans actively (or passively) supported
Hitler and its regime, but the hatred against Jews and other minorities
(e.g. Gypsies) was not a German problem, but a problem found in all christian
countries. I think, the reasons why the whole thing went out of control,
is too complex to be discussed here (besides the fact, that it is off topic
here), so lets keep it out here.

> Of course those Germans NOT alive during World War II cannot be held
> responsible. But I refuse to respond to German "CQs" because I feel the

> the only could find another Hitler. This was shown during the recent
> Gulf war when Germany was the one selling weapons and materials to make
> poison gas to Iraq.It was not Germany selling these weapons to Iraq, but German
companies, which
illegally did this. German justice prosecuted (and still does) these companies.
To make responsible *the Germans* (and to say, they are just waiting for somebody
to do such illegal business) is an insult to all (and this is the huge majority)
Germans supporting a democratic System Germany is since the end of WWII.
It would be the same, if somebody just refuses to make a QSO with an American
station, because 'all Americans are racists discriminating black people'. Just
think about it, how long it lasted, until black people got the same rights as
white
people in the USA. On which side did *You* stand in these times?
Although there are still ways to many of these brain damaged 'Arians' crying
around,
there are not more racists in Germany (and Switzerland, and France, etc.),
than in USA. Just remember, where all this Nazi-crap showing up in Europe comes
from: It mostly comes from fuckers like Garry Lauck, which proclaim their crap as
'free speech'. As long as the USA (and Canada) is not willed to stop this abuse
of the certainly important right of free speech, I would suggest You to choose
Your words more carefully next time.

> Surely there are some caring decent German people that would resist
> another Hitler and another holocaust but there are too many Germans just
> waiting to finish what Hitler started.You are doing just what the nazis started
63 years ago: You are fiddling around with

history telling lies and changing facts to bend reality to what You want it to be.
Have You ever been in Germany and have You really found all but a few Germans
to be Nazis?
Or do You just tell us about Your fantasy, how You *think* the Germans are
(or have to be?).

> Is there anyone that agrees AND is willing to say so?No, I do NOT agree, and I
do NOT accept, that somebody is changing history, just
because he is too stupid to understand it.

> I notice that hams rarely will stand up for or stand against anything.As You may
have noticed, I stand up for a democratic system practised in Germany
(and Switzerland, where I live).
And I stand up for one of the most important things, ham-radio stands for:
Bringing people together, whichever color they have and in whichever country
they live.

just think about it.

Please come back to earth..... I don't know if you've ever been to
Germany but I think there are much more NAZI's in the USA and they are
allowed to carry heavy arms.Nazi propaganda is forbidden in most of

europe and in Germany for sure.

To say "the Holocaust didn't happen" makes you go to jail in Germany
so they know what happend, but I wonder if you do.

I don't like socialists because those governments spend too much money
but to say all socialists are fasists makes really no sense at all.

Remember you live in a FREE country unfortunately with a president
that can act as dictator..... I think Germany and Dutch governments
are much more democratic than the US will ever have.

What is a country that prevents CB users to speak with other
countries?

Burt Fisher wrote:
>
> the holocaust to take place. The author shows the ingrained deep hatred
> for Jews that Germans had for Jews before Hitler came to power and that

Just a few facts, and I wonder, if you could figure out the WHY..

(1) Did you ever notice, that most people of the jewish faith have
    uniquevocal GERMAN names? Did you ever waste a thought, why that may
    be this way? Rosenzweig, Goldstein, Goldhagen ... all these names
    make sense, when you look them up in a German->English dictionary.

    How comes, that just those surnames, that are deemed "to be jewish
    names" are actually German names?

    How can that be, if "the ingrained deep hatred for Jews that Germans
    had for Jews before Hitler" were fact and not fiction?

    Wanna know the answer?

    The answer is, that Germany before those dark 12 years had been among
    the most tolerant and most liberal countries in this world. People
    persecuted in other countries for their political and/or religious
    beliefs not only went to America, more often than that they went to
    Germany.

(2) Germans understand Yiddish, the majority of jewish people understand
    German..... How comes?

    The answer is:

    Yiddish is just a German dialect, though quite a number of
    jewish non-Germans possibly might see it differently. But then
    "Yiddish" derives from "Juedisch", which is German for "Jewish"...

(3) After the spook of Nazidom had ended, a considerable number of
    Germans, who fled Germany for their jewish faith, returned to
    Germany. Why would they return to the country of deeply ingrained
    hatred against them???

    Do you know the answer?

    Germans they were before those twelve years, Germans they remained

in their hearts even abroad. They simply loved their country Germany, though for you, Burt, "being German" and "being Jewish" might seem to be in opposition to each other,...

But then, it is just a fiction created by the Nazis, and carried on by potential Nazis like you. With the mindset that you display, Burt, you would have fitted the Nazi requirements exactly. "I was told so"

"German" is a nationality and an ethnic background.
"Jew" is a reference to a religious creed.

In World War I, lutheran Germans, catholic Germans and jewish Germans fought and died side by side in the war fields of Flanders and around Verdun. And nobody gave a damn about their religious beliefs. They all fought as Germans. Period.

Putting "German" and "Jewish" into opposition,
is like claiming "American" and "Catholic" were in opposition....

> there was a widely held shared view that the the Jews ought to be
> eliminated in some way from German society. When Hitler, ultimately,

Widely held shared bull shampoo...

> > Of course those Germans NOT alive during World War II cannot be held
> > responsible. But I refuse to respond to German "CQs" because I feel the
> > mindset of Germans even today would allow a repeat of the holocaust if

The mindset you describe, Burt, is your own mindset. Unfortunately, it has some blockheads of that mindset in Germany, too. But believe me, they are just a minority like you are in the USA.

> > the only could find another Hitler. This was shown during the recent
> > Gulf war when Germany was the one selling weapons and materials to make
> > poison gas to Iraq....

(a) It was not the German government, but criminal personalities in some German companies.
(b) It did not happen during the Gulf War, but before
(c) Iraq had no weapons that were sold to it by the GErman government. Actually it had nofunctioning GErman weapons at all, neither legally sold one nor illegally sold ones.
(d) Iraq sported quite an arsenal of American weapon, given to it free by the U. S. Government earlier, when the fear of Mullahs prevailed in Washington and led to a total misperception of who Saddam Hussein might be.
(e) The crooks in Germany were prosecuted and serve jail terms.
(f) Any idea, what happened to the crooks in Washington?

> > Surely there are some caring decent German people that would resist

There had been some. I would want you to visit the Dachau concentration camp near Munich, and please, take an interpreter along with you. There

were Germans, who resisted in the bureaucracy, who dared investigate and
initiate prosecution of the Nazi murders ... and who in turn were murdered
for thei civil courage, too.

> > another Hitler and another holocaust but there are too many Germans just
> > waiting to finish what Hitler started....

What is your imbecillence quotient?

Well if you define the term "socialism" as "perverse thieve and
extortionists," then the Nazi's were certainly "socialists." However,
please realize that this is a highly idiosyncratic definition.

IN MY OPINION - THAT WHAT YOU CALL "HOLOCAUST" CAN HAPPEN EVERWHERE -
BUT THE CIRCUMSTANCES OF THE REAL HOLOCAUST GENERATED THE WORST POSSIBLE
SCENERY..(IN GERMANY)
IN MANY CONTRIES, FASCISM IS COMMING UP - THIS CAN BE RELATED TO MANY
ACTUAL - PROBLEMS - ALSO THE NEW KIND OF POORNESS

YOUR TEXT CONTAINS MANY PREJUDICES - AND REFLECTS IN NO POSITION CURRENT
MOVEMENTS IN GERMANY -

IF I LOOK AT LEGAL (NAZI - or MOREPOWER(WEAPONS)FORTHEPEOPLE)-Organisations
in the U.S. - I`m very HAPPY, that there are no equivalent movements in
europe - (that I know)
I`m also very happy that none of my neighbours stores weapons in their
basement.   8-))

PLEASE DON`T POST SUCH SHIT HERE - PREJUDICES ONLY GENERATE OTHER
PREJUDICES

HOLOCAUST ALSO HAPPENED BECAUSE OF PREJUDICES

First of all, I am really astonished to find such political topics
in these newsgroups!

Whatever you feel, ethically, politically or whatsoever:
don't blame people globally in that nasty way!

> The best selling book, "Hitler's Willing Executioners" by Daniel Jonah
> Goldhagen tells the story of how ordinary Germans (like hams) allowed
> the holocaust to take place.

Ordinary people like hams?
What does political practice, murder, slaughter have in common with
a hobby like amateur radio?
Do you have statistical material about the corelation of being engaged in
a certain hobby and the partizipation in crime?

> But I refuse to respond to German "CQs" because I feel the
> mindset of Germans even today would allow a repeat of the holocaust
> [mess stripped of]

Amateur radio is the only hobby to communicate freely, worldwide and personally!
Please bear in mind that most of the hams are thinking that way.
Political aspects, ethical discussions and moral disputes have nothing
in common with our hobby.
If you cannot handle that, you MUST refuse contacts with a lot of countries.
Would you think about chinese brutality when working Spratly?

> Surely there are some caring decent German people that would resist
> another Hitler and another holocaust but there are too many Germans just
> waiting to finish what Hitler started.

Why do you think so?
Only by reading a book?
Open your eyes, you are more than 50 years too late!

My definition is objectively derived from socialism's primary

mandate - economic control and regulation. Socialist governments
take earnings and other property without permission of the owners.
That's theft. Compliance is achieved through the threat of force.
That's extortion.

If my definition is idiosyncratic, Webster's Dictionary isn't
as truthful as I thought. ;)

Hello all:

In the last message that I sent over usenet I forgot to include my url for my web site. The URL is "http://www.dfw.net/~dmclean". I have many things on my web page. Here is a list of many things:

1. Links to other ham stuff (QRZ,FCC,ARRL,ETC).
2. List of sites that have radio mod's.
3. A swap page to exchange junk on!
4. Repeter list for D/FW area (other states comming soon!)
5. List of web pages made by other ham.
6. Page to view all comments about my page (Not yet working but comming)
7. ***A fun place to be!!!***

If you have a web page or want to send a comment about my page please send mail to dmclean@dfw.net. I Have more plans in work for the page. IRC channel comming for talk. Keep you ears open!

I tried this URL yesterday and again this morning with no results. Netscsape
keeps contacting the host forever. Please try your page from another site and
see if it can be accessed.

It worked fine for me the other day, and I just checked it again and it's
working.

Dave,

     I guess I might be overlooking something, but I don't see a URL listed here. You might want to post that so people can check out your page.

                         73,

If I was to set up a FBB packet station.

How would I get the feed?

Is there a way via the internet?

Or by telephone line?

From: chrisp@mdsroc.com (Christopher Piggott)
Subject: AutoMap software and GPS - some answers, some questions
Date: 1996/02/15
Message-ID: <4fvq5m$6e7@mdsroc.com>#1/1
X-Deja-AN: 139521478
organization: Microwave Data Systems
mime-version: 1.0
newsgroups: sci.geo.satellite-nav,comp.os.ms-
windows.programmer.networks,rec.radio.amateur.packet

This note is somewhat oddly cross-posted, in part because so many are interested in GPS (including amateur packet radio). This article pertains to you if you're interested in hooking a GPS up to inexpensive moving map software that does NOT require you to have a portable CD-ROM for your laptop.

Someone posted a question asking about GPS interfacing to AutoMap software. I was interested a while back in developing software to interface to the Motorola GPS module.

In the AutoMap owner's manual, there is the following note:

> 1.3 Automap Pro DDE interface
>
> > Automap Pro includes a DDE interface which is particularly suitable for use in conjunction with Global Positioning System (GPS) equipment. Please contact Automap, Inc. for further information concerning the Automap Pro

Developer's Kit

I made several attemps to locate "Automap, Inc" without luck. The owner's manual is published by Microsoft and refers to two companies in various places: "Automap, Inc." and "NextBase". Neither company appears to exist any longer. Since them, the product was purchased by Microsoft.

Despite the reference in the owner's manual (which Microsoft published), the Microsoft help line (apparently dedicated exclusively to the Automap products) claims that, contrary to the above excerpt, they do not offer this product. The person I talked to seemed to be vaguely aware of its previous existence. (Sidebar: this is apparently why they put the remarks: "Contents of this manual are subject to change" in the manual).

Needless to say, I am extremely disappointed, because I purchased this program specifically so that I could write GPS software.

Now, on to the hopeful part. I think it's possible for us to figure out how to write our own software interface, even though this developer's kit is not available. I took a look inside the file NBDDE100.DLL, which is the DDE/DLL interface library. Near as I can tell, this single library supports both the DDE and the DLL interfaces to AutoMap. Either one would work fine.

The example GPS interface program (which is available from ftp.microsoft.com) uses the DLL interface. This is unfortunate; if it used the DDE interface I would probably be able to monitor the messages and duplicate them with my own program. It is probably still possible to do this with the DLL interface and a schnazzy windows debugger or soft ICE. If anybody has these tools and knows how to use them, please help us!!! Send e-mail and I'll explain the details.

Meanwhile, if anybody on the net can get me a contact in Automap, NextBase, or knows the author of the example GPS interface program to Automap Pro (Tomasz Kasperkiewicz of Nextbase Ltd.) please write me or call me on the telephone. I'm desparate for this information.

By the way, if you happen to have a ROckwell, Sony, or Marconi-based GPS receiver, you may be able to juse download the program from microsoft and have it work. However, I should warn you that the program is somewhat of a pain; it seems to be meant to be an example of what you can do rather than an end-user application. I imagine it was intended to be distributed with source, which is what I had hoped, but somebody changed the plan. (Thanks again, Bill.)

(I sure hope I got this constrained to AMD only!)

If you're a ham and you work at AMD, please read this!

We're starting an amateur radio club at AMD Austin. If you're in
Austin, send me (or Curtis.Doss) e-mail for more info. We're just
getting organized to ask AMD for space and support, so your interest
is important.

If you're not in Austin, we'd like to know about any non-Austin AMD
ham clubs (or hams, for that matter).

I'm looking for commercial off the shelf products that can be attached to HF/VHF radios to turn them into network nodes on a standalone RF data network. Any suggestions/comments would be greatly appreciated. The protocol used by the attachments is not critial, although I would prefer a standard one. Crypto support would be nice.

----
important legal disclaimer

-you MUST be licensed by your country's telecom authority to
set up such a network.
fines and imprisonment are realistic possibilites
for skirting the law.
----
amateur radio frequencies are regulated by the ITU, and are
for amateur use only for non-commercial , non-business
purposes only
----
amateur radio digital modems, however, will work on a wide
range of frequencies, including business frequencies

This is what you want:
(all currency amts USD)
$100.00 to $1000 depending on features-
----
essentially a Packet Assembler/Dissasembler (PAD)

Connects between comm port on computer and tranciever.

Advanced Electronics Association PK-232 MBX
(AEA PK-232 MBX) is good, about $500.00
----
and numerous other mfgs and models
----
these boxes are designed for use in amateur (ham) radio
but there is nothing amateur about the performance, price
or quality - work fine on business freqs.

---
essitientially no different than commercial gear
costing thousands more, and for no good reason
other than limited buyer knowledge
---
in the ham radio world, a worldwide network moves ham digital
traffic on such equipment 24 hrs a day 7 days a week.
---
available with 1200 baud, 9600 baud 19.2 k baud and 56 k baud
modem

Does almost every protocol you can imagine
---
works with HF, VHF and UHF trancievers
---
supports FM and SSB
---
supports packet (ax.25), pactor, rtty, clover, piccalo,
baudot, amtor, TCP/IP, etc.

Full digipeater support.

Support BBS, ROSE, NOS, TNOS, and JNOS control/networking
bulliten board and routing software.

Incredible wide range of commercial and shareware
software support for any purpose possible.

Hire a licensed amateur radio operator to set it up,
or a licensed commercial radio company.
---
licensed ham operators may not accept payment for work done
regarding ham radio frequencies,and services, but of course
can use their knowledge of radio to earn money in commercial
enterprises.

Good luck,
Jim Licensed Amateur Radio Operator N2NHU in USA

>Hello! I've got some awesome news that I think you need to take
>two minutes to read if you have ever thought "How could I make
>some serious cash in a hurry???" , or been in serious debt, ready
>to do almost anything to get the money needed to pay off those

>bill collectors. So grab a snack, a warm cup of coffee, or a glass
>of your favorite beverage, get comfortable and listen to this
>interesting, exciting find! >   Let me start by saying that I FINALLY
>FOUND IT! That's right!
>I found it! And I HATE GET RICH QUICK SCHEMES!! I hate those
>schemes like multi-level marketing, mail-order schemes, envelope
>stuffing scams, 900 number scams... the list goes on forever. I
>have tried every darn get rich quick scheme out there over the
>past 12 years. I somehow got on mailing lists for people looking
>to make money (more like 'desperate stupid people who will try
>anything for money!'). Well, when I was a teenager, these
>claims to 'get me rich quick' sounded irresistible! I would shell
>out $14.95 here, $29.95 there, $24.95 here, and another $49.95
>there. I had maxed out my new Circuit City Card AND my Visa...I
>was desperate for money!! So, I gave them all a chance but
>failed at every one of them! Maybe they worked for some people,
>but not for me. Eventually, I just tossed that JUNK MAIL in the
>trash when I got the mail. I recognized it right away. I can
>smell a money scam from a mile away these days, SO I THOUGHT....
>I thought I could sniff out a scam easily. WAS I WRONG!!!
>...I LOVE THE INTERNET!!!
>   I was scanning thru a NEWSGROUP and saw an article stating to
>GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll
>just have to see what schemes could possibly be on the internet."
>The article described a way to MAIL A ONE DOLLAR BILL TO ONLY
>FIVE PEOPLE AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well,
>the more I thought about it, the more I became very curious. Why?
>Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME
>FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!
>   Ok, so the $50,000 in cash was maybe an tough amount to reach,
>but it was possible. I knew that I could at least get a return
>of $1,000 or so. So I did it!! As per the instructions in the
>article, I mailed out ('snail mail'for you e-mail fanatics) a
>single dollar bill to each of the five people on the list that
>was contained in the article. I included a small note, with the
>dollar, that stated "Please Add Me To Your List." I then removed
>the first position name of the five names listed and moved
>everyone up one position, and I put my name in position five of
>the list. This is how the money starts rolling in! I then took
>this revised article now with my name on the list and REPOSTED IT
>ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD
>MESSAGE AREAS THAT I KNEW. I then waited to watch the money
>come in...prepared to maybe receive about $1000 to $1500 in cash or
>so....
>But what a welcome surprise when those envelopes kept coming in!!! I
>knew what they were as soon as I saw the return addresses from people
>all over the world-Most from the U.S., but some from Canada, even
>some from Australia! I tell you, THAT WAS EXCITING!! So how
>much did I get in total return? $1000? $5000? Not even!!! I
>received a total of $23,343!!! I couldn't believe it!!
>   I now have a brand new black Acura Integra to speak for, due
>to this!! Now after almost 8 months, I am ready to do it again!!!
>So maybe it was possible to get $50,000 in cash, I don't know,

>but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You
>must follow through and repost this article everywhere you can think
>of! The more postings you achieve will determine how much cash
>will arrive in your very own mailbox!! It's just too easy to
>pass up!!!
>   Let's review the reasons why you should do this: The only
>cost factors are for the five stamps, the 5 envelopes and the 5
>one dollar bills that you send out to the listed names by snail
>mail (US Postal Service Mail). Then just simply repost the
>article (WITH YOUR NAME ADDED) to all the newsgroups and local
>BBS's you can. Then sit back and, (ironically), enjoy walking
>(you can run if you like! :o) down your driveway to your
>mailbox and scoop up your rewards!! We all have five dollars to
>put into such an easy effortless investment with SPECTACULAR
>REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So
>HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT
>HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND
>INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM
>NOW!!! YOU CAN'T LOSE!!
>   So how do you do it exactly, you ask? I have carefully
>provided the mostdetailed, yet straightforward instructions on
>how to easily get this underway and get your cash on its way.
>SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!
>*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***
>OK, Read this carefully. Get a printout of this information,
>if you like, so you can easily refer to it as often as needed.
>INSTRUCTIONS:
>1. Take a sheet of paper and write on it the following:
>"Please add my name to your list". This creates a service out
>of this money making system and thus making it completely legal.
>You are not just randomly sending a dollar to someone, you are
>paying one dollar for a legitimate service. Make sure you
>include your name and address. I assure you that, again, this
>is completely legal! For a neat little twist, also write what
>slot their name was in: "You were in slot 3", Just to add a
>little fun! This is all about having fun and making money at
>the same time!
>2. Now fold this sheet of paper around a dollar bill ,(no
>checks or money orders), and put them into an envelope and send
>it on its way to the five people listed. The folding of the
>paper around the bill will insure its arrival to its recipient.
>THIS STEP IS IMPORTANT!!
>3. Now listen carefully, here's where you get YOUR MONEY COMING
>TO YOUR MAILBOX.   Look at the list of five people; remove the
>first name from position one and move everyone on the list up
>slot one on the list. Position 2 name will now move to the
>position 1 slot , position 3 will now become position 2, 4 will
>be be 3, 5 wil be 4. Now put your name, address, zipcode AND
>COUNTRY in position 5, the bottom position on the list.
>4. Now upload this updated file to as many newsgroups and local
>bulletin boards' message areas & file section as possible. Give
>a catchy description of the file so it gets noticed!! Such as:
>"NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF

>YOUR DEBTS??", etc. And the more uploads, the more money you
>will make, and of course, the more money the others on the list will
>make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING
>HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS
> PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe
>me!!! Set a goal for the number of total uploads you'll post, such as
>15-20 postings or more! Always have a goal in mind!!! If you can UUE
>encode the file when uploading, that will make it easier for the
>people to
>receive it and have it downloaded to their hard drive. That way
>they get a copy of the article right on their computer without
>hassles of viewing and then saving the article from the File menu.
>Don't alter the file type, leave it as an MS-DOS Text file. The
>best test is to be able to view this file using Microsoft's
>Notepad for Windows 3.x or WordPad for Windows '95. If the margins
>look right without making the screen slide left or right when at
>the ends of the sentences, you're in business!
>5. If you need help uploading, simply ask the sysop of the BBS,
>or "POST" a message on a newsgroup asking how to post a file,
>tell them who your Internet provider is and PEOPLE WILL ALWAYS BE
>GLAD TO HELP. I would try to describe how to do it but there are
>simply too many internet software packages with slightly different
>yet relatively simple ways to post or upload a file. Just ask for
>help or look in the help section for 'posting'. I do know that for
>GNN, you simply select 'POST' then enter a catchy description
>under the subject box, choose 'ATTACH', selecting 'UUE' and NOT
>'TXT', then choose 'Browse' to go look for the file. Find your
>text file CASH.TXT and click on it and choose 'OK'. Place a one
>line statement in the main body section of the message post
>screen. Something like "Download this to read how to get cash
>arriving in your mailbox with no paybacks!" or whatever. Just make
>sure it represents its true feasibility, NOT something like...
>"Get one million dollars flooding in your mailbox in two days!"
>You'll never get ANY responses!
>
>6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE
>BECAUSE CASH IS ON ITS THE WAY!! Expect to see a little money
>start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE
>MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it
>out of the mailbox and try not to scream too loud (outside anyway)
>when you realize YOU HIT THE BIG TIME AT LAST!!
>7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something
>special you always wanted or buy that special person in your life
>(or the one you want in your life) a gift they'll never forget.
>ENJOY LIFE!
>8. Now when you get low on this money supply, simply re-activate
>this file again; Reposting it in the old places where you
>originally posted and possibly some new places you now know of.
>Don't ever lose this file, always keep a copy at your reach for
>when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU
>CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS
>NEEDED!
>9. (This step added by Charles Reiley). Hello, This is exciting

>isn't it?! While I'm on the list, just add a note saying "Please
>include extra money tips" with your name & E-MAIL address, and I
>will (FOR FREE) send you some neat methods to increase the money
>you will receive with this plan. Why?... Why not? I'm not a selfish
>jerk...I like helping out others. E-mail just makes it a touch
>easier and cheaper, too! After I drop off the list, I can no
>longer offer you this advice, obviously, but maybe someone else
>who gets my tips will offer and simply replace my name on this step
>number 9. Good luck and give this plan your all, it will definitely
>pay off! Like Mike said, HAVE FUN WITH IT!!!

Yes, and I also believe--in the laws of statistics and the criminal code. (At least if I can get caught.)

Look at http://www.usps.gov/websites/depart/inspect/chainlet.htm

Suppose one person makes $15K. Well, then they have gotten the equivalent of all of the entry fees of 3K people.

So, there must be 3K people getting $15K. So, they must have gotten the equivalent of the entry fees of 9 million people.

So, there must be 9 million people getting $15K. So, they must have gotten the equivalent of the entry fees of 27 billion people. Earth has 5.7 billion people.

In other words, this is a fucking fraud!

Clearly almost anyone can better use ham frequencies than hams can.
Have you listened to the important conversations plus contests
and useless traffic on ham bands. If the FCC wiped out ham radio
today 99% of the public would be unaffected. Even most hams
would be unaffected as they are either dead, should be dead, or
inactive.

I think I will write my congressIT.

Don't buy into Burt's flame. He lives to do this sort of thing.

Mike

I second the motion. Apparently Mr. Fisher has not been involved in the
public service side of amateur radio.

what kind of HAM are you? That is no way of supporting Amateur
Radio!! I'm 26 and been a ham sine 13. I've seen hams help disaster
agencies,etc....You should resign your call and don't even think you
were an Amatuer Radio operator! I could not beleive I read this JOKE!

Why put Mr. Fisher in Low Earth Orbit? His "mind" is already in outer
space.

Guys, Guys, guys..!!

Lets take the negative energy generated here and use it to write to those
who thought up this whole (CENSORED) idea.
 Flaming Burt does nothing but show Burt that he is great at generating hate
mail.
I for one will direct resentment, anger, attention..to the FCC and others..

We should be dead ? Is that the idea of this all ? Hey, I got a great
idea, why don't we do whatever we want on the airwaves, because as soon
as someone says money, they can do whatever they want to, right ? Rumor
has it that one of the biggest supporters of LEO is Bill Gates of MS,

although I really don't know why he'd be interested. Every day I'm seeing more and more that supports the total " assholiness " of the plastic generation. I suppose if they had it their way, we'd all just be able to bend over and kiss their asses on request. Because hey, they're some really good guys, and one look at us will tell you how bad we suck.

Have they ever done anything on their own, original, or is this another attempt at crass commercialization of someone else's good idea? We're just curious, because we don't really have anything to lose anymore. See, they came and ripped us off before they put the bid in, and I'd worry about that statement, if there wasn't ample proof. Seems maybe they are interested in us, after all. God help the clueless.

I think your article is flame bate. If you truly belive what you just
wrote, you are moron. If you were just trying to be "cute" you should
clarify in a followup article before your peers realize you are a
moron too.

Nothing personal.

Even it that were true. It better than saying HIHI and calling
CQ Contest

I have indeed.
Public service, for the most part, in ham radio is a joke.

Good Idea, but let's make sure the letters sent are logical and not
flames. Be curtious and state your case NICELY. Blasting them will only hurt
our cause. Stressing the possitive aspects of the bands.

********** 2 Meter AND 70 cm BANDS THREATENED **********

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT (LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ (THE CURRENT AMATEUR 70 CM BAND)!

IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF BANDS!

I have included the text of Dave Sumner's upcoming editorial for July QST in this bulletin. ARRL, as the principal representative of Amateur Radio in Washington, is actively pursuing this issue as this bulletin is being written. Dave's call to action is serious!! We could lose these bands if we do not take action now!!

Club presidents and newsletter editors: please make this information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."

Here's what's happening, and what you can do about it.

The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a

streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.

For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary U.S. proposals for public comment.

In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: "Interested parties should note that input to the Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee; the Chairs of the Advisory Committee's Informal Working Groups; Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee,on C. Ladson, the alternate federal officer."

Hold that thought while we shift gears to the substance of the issue.

One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile- satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.

At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected -- the point being that some political, rather than purely technical, judgment already has influenced the list.

Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and iup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile- satellite service could be introduced into either band without disrupting existing

and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144- 148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.
Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.
Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.
Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.
Leslie Taylor, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.

To monitor the FCC's ongoing WRC-97 preparations, visit its WRC-97 home page at: http://www.fcc.gov/ib/wrc97/.

                Published in the year of our Lord 1894
                          Spiritual Guidance Press
                               New York City

To the sensitive young woman who has had the benefits of proper upbringing, the wedding day is, ironically, both the happiest and most terrifying day of her life. On the positive side, there is the wedding itself, in which the bride is the central attraction in a beautiful and inspiring ceremony, symbolizing her triumph in securing a male to provide for all her needs for the rest of her life. On the negative side, there is the wedding night, during which the bride must pay the piper, so to speak, by facing for the first time the terrible experience of sex.

At this point, dear reader, let me concede one shocking truth. Some young women actually anticipate the wedding night ordeal with curiosity and pleasure! Beware such an attitude! A selfish and sensual husband can easily take advantage of such a bride. One cardinal rule of marriage should never be forgotten: GIVE LITTLE, GIVE SELDOM, AND ABOVE ALL, GIVE GRUDGINGLY. Otherwise what could have been a proper marriage could become an orgy of sexual lust.

On the other hand, the bride's terror need not be extreme. While sex it at best revolting and at worse rather painful, it has to be endured, and has been by women since the beginning of time, and is compensated for by the monogamous home and by the children produced through it.

It is useless, in most cases, for the bride to prevail upon the groom to forego the sexual initiation. While the ideal husband would be one who would approach his bride only at her request and only for the purpose of begetting offspring, such nobility and unselfishness cannot be expected from the average man.

Most men, if not denied, would demand sex almost every day. The wise bride will permit a maximum of two brief sexual experiences weekly during the first months of marriage. As time goes by she should make every effort to reduce this frequency. Feigned illness, sleepiness, and headaches are among the wife's best friends in this matter. Arguments, nagging, scolding, and bickering also prove very effective, if used in the late evening about an hour before the husband would normally commence his seduction.

Clever wives are ever on the alert for new and better methods of denying and discouraging the amorous overtures of the husband. A good wife should expect to have reduced sexual contacts to once a week by the end of the first year of marriage and to once a month by the end of the fifth year of marriage.

By their tenth anniversary many wives have managed to complete their child bearing and have achieved the ultimate goal of terminating all sexual contacts with the husband. By this time she can depend upon his love for the children and social pressures to hold the husband in the home.

Just as she should be ever alert to keep the quantity of sex as low as possible, the wise bride will pay equal attention to limiting the

kind and degree of sexual contacts. Most men are by nature rather perverted, and if given half a chance, would engage in quite a variety of the most revolting practices. These practices include among others performing the normal act in abnormal positions; mouthing the female body; and offering their own vile bodies to be mouthed in turn.

Nudity, talking about sex, reading stories about sex, viewing photographs and drawings depicting or suggesting sex are the obnoxious habits the male is likely to acquire if permitted. A wise bride will make it the goal never to allow her husband to see her unclothed body, and never allow him to display his unclothed body to her. Sex, when it cannot be prevented, should be practiced only in total darkness. Many women have found it useful to have thick cotton nightgowns for themselves and pajamas for their husbands. These should be donned in separate rooms. They need not be removed during the sex act. Thus, a minimum of flesh is exposed.

Once the bride has donned her gown and turned off all the lights, she should lie quietly upon the bed and await her groom. When he comes groping into the room she should make no sound to guide him in her direction, lest he take this as a sign of encouragement. She should let him grope in the dark. There is always the hope that he will stumble and incur some slight injury which she can use as an excuse to deny him sexual access.

When he finds her, the wife should lie as still as possible. Bodily motion on her part could be interpreted as sexual excitement by the optimistic husband.

If he attempts to kiss her on the lips she should turn her head slightly so that the kiss falls harmlessly on her cheek instead. If he attempts to kiss her hand, she should make a fist. If he lifts her gown and attempts to kiss her anyplace else she should quickly pull the gown back in place, spring from the bed, and announce that nature calls her to the toilet. This will generally dampen his desire to kiss in the forbidden territory.

If the husband attempts to seduce her with lascivious talk, the wise wife will suddenly remember some trivial non-sexual question to ask him. Once he answers she should keep the conversation going, no matter how frivolous it may seem at the time.

Eventually, the husband will learn that if he insists on having sexual contact, he must get on with it without amorous embellishment. The wise wife will allow him to pull the gown up no farther than the waist, and only permit him to open the front of his pajamas to thus make connection.

She will be absolutely silent or babble about her housework while his huffing and puffing away. Above all, she will lie perfectly still and never under any circumstances grunt or groan while the act is in progress. As soon as the husband has completed the act, the wise wife will start nagging him about various minor tasks she wishes him to

perform on the morrow. Many men obtain a major portion of their sexual satisfaction from the peaceful exhaustion immediately after the act is over. Thus the wife must insure that there is no peace in this period for him to enjoy. Otherwise, he might be encouraged to soon try for more.

One heartening factor for which the wife can be grateful is the fact that the husband's home, school, church, and social environment have been working together all through his life to instill in him a deep sense of guilt in regards to his sexual feelings, so that he comes to the marriage couch apologetically and filled with shame, already half cowed and subdued. The wise wife seizes upon this advantage and relentlessly pursues her goal first to limit, later to annihilate completely her husband's desire for sexual expression.

Hi ...

I've run everything from a Baycom to a full, big-time BBS on my HP100LX. It ran it all. MSYS runs fine and gives you a network node, k-node, tcp/ip, etc. A really nice _little_ terminal called MSYST.EXE comes packaged with MSYS and I use that when I don't have the RAM card in the slot.

If you are going to consider Baycom, consider powering it thought an external battery. A schematic will show you how.

Paccomm's small TNC makes an excellent companion TNC. It's capable of KISS and has BBS software inside. Keeping the NiCads up to charge is a pain. I get a lot of reset to default problems. Overall, it's easy to reinitialize and I can live with it.

I have just come out with a new version of my DOVE satellite decoder program (V2.0). It will decode the telemetry data that comes from the DOVE amateur radio satellite. In this release are numerous bug fixes and some new graphing capabilities. It requires windows 3.1, a packet TNC and a 2 meter rig. This program is FREEWARE and is available from the following sources:

Internet FTP
ftp.amsat.org /amsat/software/windows/telemetry/dovedv20.zip

RadioSport BBS
619-279-3921 dovedv20.zip

Mail
In the US and Canada send $1 and I'll provide disk, mailer, and postage. Please specifiy disk size (5.25, 3.5) and send to:

KaGold is indeed around. I have been using it for 4 years.
Currently I am using KaGold/386 which includes pactor (HF) and
is Interflex Systems best offering yet.

You can download a copy of their so called "test drive" version
of KaGold from their BBS @ (714)497-5860. Jeff Towle, one of
the authors of the program may be reached via EMail at
"jtowle@interflex.com"

My opinion is that KaGold has developed into the best around.
I think you will find that it is worthy of your consideration.

It should be the best, after all, it changes version numbers at least 4 times a month.

The newer Windows packet programs are giving the old DOS based Gold program some pretty good competition.

I still have a version 7 in my junk box waiting for a bug fix to allow it to work. I can't sell it or give it away though, as they burned my callsign into it. Sorta like buying a camera that only the original owner can use...

Hi !

I am beginner sysop F6FBB BBS.
I want to do forwarding via InterNet.
Simple scheme is:

I would like to made following protocol:

1. From my BBS I get access to PAD port (this port on PAD
   I can configured as desire) and waiting PAD prompt.
   (for example: "SYSTEM>")
2. Then I send network address to connected with GATE X.25/IP
   (for example: "210046") and waiting InterNet prompt.
3. Then I send my login, password, and "telnet xxx.xx.xx.xx"
4. Then I send login and password again and connecting to BBS.

My questions are:

1. How I can to get access from F6FBB BBS to remote device
   (Asynchronous PAD) and to see its prompt? That must be
   single-user cable connection (as RS-232 remote terminal).

2. May be possible to made procedure to automatic realization
   my protocol (see above)?

My software:

MSDOS 6.2
F6FBB 5.15
G8BPQ 4.08a

Thank you.

No such luck. The problem is that the radio is synthesized, and modulates a
VCO directly, which is simply not compatible with G3RUH modulation at any
speed. Your best bet is to look for another radio: The MFJ for 2 meters, the
TEKK or Kantronics for 440.

Well Dave, you may not know this, but Kenwood has more than one model!
But that's OK, because I can tell you the answer: NO!

The reason is, the KPC-3 won't do 9600.

Get a KPC-9612 and a TEKK KS-900 and use that with a Kantronics

RFC 4-110. That'll give you about 30 Watts, a modern radio, and
the best damn 9600 TNC on the market. Don't buy the Kantronics
mini-UHF Amp. It's junk. If you have a local 9600 repeater, then
the TEKK at 2 watts into a beam should be fine.

Well, first you know the KPC-3 won't do 9600 baud don't you?

I recommend against the Kantronics (RF Concepts) RFC4-110, because it is relay switched. The time involved in relay switching will shoot your throughput down to around the 1200 baud level. A better choice would be the Mirage 24N (?), which is diode switched, and puts out about 15 watts. I think they have a higher-powered model, too. (Not sure about the Mirage model number).

Yes Dave, I have been running a 241a on 1200 baud packet for years now. Works great, and I even modified mine with a DB-9 socket in the rear for data. I got the audio from the discriminator too, hence, TNC always gets the correct level, regardless where the "volume" is set at.

Sure! 1200 baud is what most user ports are running, and 2400 baud doesn't
require you to go into the radio, either. Both use the mic input for TXAudio,
the speaker output for RXAudio, and PTT and Ground should be self-evident.

The only further option is 4800 baud - some postings here dealt with
that recently, and from that there isn't much activity in the USA.
A group in Hamilton, Ontario (HAPN) developed a modem in 1988 that works
well at 4800, with nay radio. You MUST go into the radio and get
audio direct from the discriminator output and inject modulation directly
into the modulation input - easy to find if you have a schematic.

If you're not into soldering onto SMD boards, stick to 12/2400.

I agree - some relays can be awfully fast. Not in this case, though. My
RFC4-215 (I think - 440, 2w in, 15w out) required a TXD of 28 (280 mS), and
that was using a TEKK with a TXD of 1! Certainly, throwing the RF sensing
circuit out cut it to TXD 12, but all of that was relay...

Remember, we're talking 9k6, not 1k2, and crystal radios, not PLL.
But, your point is well taken. Pauldon associates in Tonowanda NY makes
a few relay-switched PAs that, if you drive the PTT directly, have a
switching time of less than 40 mSec - with a TEKK, that's TXD 5.

The 4-110 has a "PTT" jack. Wired to the TNC's PTT you have a very fast switch. If you depend on the default RF detection switching, then yes, that would slow things down.

I'd use one of these over the 70's junk radios people are modifying.

You must be using the RFC 4-32 (3 watts in and 20 watts out) in which case I think you have a problem as the TXD required on that amp is only 10 milliseconds additional to the radio requirement. The only other 440 MHz amps they make are the 4-110 and 4-310 (10 in 100 out or 30 in 100 out), and those require about 150 milliseconds over the radio.

I've been using a 4-110 on my D4-10 port at 9600 baud for over 4 years now and with the txd of 18, it's working great. Ya, that sounds slow, but it still beats the dickens out of 1200 baud.

A KPC-3 will do 1200 baud packet. An FM radio that has voice capability
can do packet without modification. 2400 baud is the limit of unmodified
radios, but the KPC-3 can't do anything but 1200. All you have to do is
wire the KPC-3 to the Tm-241A microphone input, and audio output.
1200 baud FM packet uses Audio Frequency Shift Keying (AFSK), with
tones of 1200 Hz and 2200 Hz. Most radios can handle those frequencies
just fine, since they are made to pass voice.

You guys keep going on about TX relay timings. That's not the
problem. It doesn't matter what baud rate the actual packet of data
is sent at once the TX relay is pulled in. It's usually delays in the
audio and I.F. sections of the tranceiver that prevent you from
running 9600 baud.

A new ham radio related web site is on-line. It contains Articles
and Radio-TNC Wiring Diagrams.

URL: http://www.idir.net/~medcalf/ztx/

Current Articles

    Desense: Some Possible Solutions

    TOR Modes: Hearing the Difference (includes sound files)

    Getting Information from a Weathernode

I plan to add an article approximately once a month. These articles may
be reprinted in amateur radio club newsletters provided that credit is
given to the author.

Friends

For those who have received the RADIO STATION DATABASE DEMO,I may have typed the unzip
instructions incorrectly. They should read as follows if they don't:

    PKUNZIP.EXE DATABASE.ZIP C:\DEMO2

If you did not get a copy of the DEMO and would like one, send your EMAIL address and
I will return the Demo to you via EMAIL

Thanks

Chuck Bolland

Check out Ham Radio Online at
http://www.accessone.com/~vbook/hronline.htm

Newsletters, Feature Stories, Real-time solar and radio propagation conditions,
real-time disaster communications news (world wide earthquake, volcanic and
severe weather reports). In short, real content, not just pointers to
hyperspace.

Once again the world celebrated the birth of Rick Palm on December 25.
You know him, from ARRL fame the one that had TWO columns on him in the
Diamond feature in QST, the one who was on several QST covers, and the one
who fired Luck Hurder for being competent.

By-line: AURAL SEX TUNED IN

By: Roberta Staley, Staff Reporter

A ham radio operator is endangering lives by jamming police radio channels with recordings of a couple having sex.

"It's extremely dangerous," Vancouver police Insp. Al Forbes said last night.

"It not only puts the people we're trying to protect in jeopardy by jamming the channel, it also puts our own members at risk," Forbes said.

The pornographic sounds and two blasts of country music were first heard Thursday night about midnight. The second incident happened several times last night starting about 7 p.m., said Forbes.

"I think it's a video and they're playing the sound-track over the channel."

Police switch the channel off and begin communicating on another one. The cheeky radio operator also switches over, jamming the new channel.

"They obviously know all the frequencies," Forbes said.

In emergencies, police can be heard over the interference, although it remains distracting, he added.

The inspector said it's unlikely the radio pervert will be caught.

End of story.

Yuck. Besides setting the newspaper straight, it would be useful for the local
Amateur community to assist the police with radio direction finding efforts in

locating the source of the interference. That's been done elsewhere and turned an ugly situation into a great one.

Good luck,
Ed, KF7VY

What's the matter? Isn't there a ham club up there? I would think
they'd love the opportunity to track down this geek using RDF and
a few cases of brewskis as a reward.

Hello to all:

    Come a take a look at my new web page. I have been working on it for

the last 4 weeks. I have lots of thing that you will like. Some of the things that I have are: MODs, Swap Shop, Dfw repeter list, comment page, links to other good ham pages, call looks ups (updated by the sec), radio pricing, Links to QRZ,FCC,HRO, and many more. If you are a ham and would like you web page added to my list just send me e-mail. Please tell me what you like and dislike about the page. I want all types of comments. Hope you like what I have.

Ahh that was pretty easy to find the URL

try   www.dfw.net/~dmclean

It worked for me

Too bad we can't replace morse code for questions like this !

Subject: AX.25 and Linux - my experience
Message-ID: <1994Mar3.165358@cs.man.ac.uk>
Date: 3 Mar 94 16:53:58 GMT
Sender: news@cs.man.ac.uk
Organization: Department of Computer Science, University of Manchester
Lines: 82

Hi,

A few days ago I posted a question about AX.25 and Linux - various people asked
me to post my findings, so here goes. Please don't have a go at me re: my lack
of knowledge of the Linux kernel; although I've been Linuxing for quite a

while, my knowledge of the kernel is fairly limited.

This is how I got KISS encapsulated AX.25 TCP/IP working on Linux 0.99-pl15.
Note that some of this is conjecture; i.e. it seems to work :-)

1. ftp the AX.25 patches from sunacm.swan.ac.uk:/pub/misc/Linux/Radio/AX25012
   (there may be a later revision than 12).

2. Unpack the new files in the Linux source tree - there are a few in net/inet,
   and one in include/linux.

3. Do a 'mknod /dev/af_ax25 c 30 0' (I don't know if this is actually necessary).

4. Edit drivers/net/slip.c. Search for ax25_test, and change the callsign therein
   to your own. For example, for my call (G7OMZ-5):

   ```
   static char ax25_test[7]={'G'<<1,'7'<<1,'O'<<1,'M'<<1,'Z'<<1,' '<<1,'5'<<1};
   ```

5. The next bit is quite hacky. There is an implementation of KISS encapsulation
   in slip.c, but by default it isn't enabled. I couldn't figure out how to make
   a SIOCSIFENCAP ioctl() call (I didn't know what to give it as a file
descriptor),
   so I just hard-wired it to set all SLIP channels to SL_MODE_AX25 in
   sl_initialize(). Of course, this won't do if you use SLIP for anything else,
   so you'll have to hack around in slip_init(). There's a call to
sl_initialize()
   in there, so you'll have to test for certain interfaces and set SL_MODE_AX25
   accordingly. I don't know enough about the kernel to comment.

6. Edit config.in, and search for CONFIG_PLIP. Add a line above it:

   ```
   bool 'AX.25 (KISS) encapsulation support' CONFIG_AX25 y
   ```

7. make mrproper ; make config ; make dep ; make zImage, then install the new
kernel
   as per usual and reboot. Fingers crossed!

8. When the system comes back up, create a file containing the following commands:

   ```
   port ttyS2
   speed 9600
   term
   local 44.131.1.254
   remote 44.131.1.57
   mode SLIP
   ```

   Replace ttyS2 with the port your TNC is connected to, and the local IP address
   should be your own. The remote IP address should be either the nearest
   neighbour through whom you want to route, or your local subnet (mine is
   44.131.1.0).

9. Type 'dip filename'. You'll be in terminal mode with your TNC. Put it into
   KISS mode (usually 'kiss on') and type a ^]. This should set everything up

   for you.

10. If you type /etc/ifconfig, you should see two messages; one for the loopback
    device 'lo', and one for 'sl0'. If you type /etc/route, you should see that
    there is now an entry for 'sl0'. You can either make this your default
    router (as you would do if there is an Internet gateway nearby) with:

      /etc/route add default gw 44.131.1.57

    ...or (more likely) you will only want to route ampr.org packets through it,
    which will look like:

      /etc/route add 44.0.0.0 gw 44.131.1.57

11. That's it! You can now add those commands to your /conf/net/rc.inet[12]
    files to set it up at boot time.

Cheers,

Ian.

Attention F6FBB Sysops/Networkers!

Welcome!
     A new forum has been begun for FBB Sysops. The purpose of this server is
to provide Sysops and Networkers with tricks/tips/help and new software
updates concerning the F6FBB bulletin board system.

To Add Yourself To This List, Please Send Electronic Mail To:

listserv@stat.com

And Include The Command:

subscribe f6fbb-list

As The First Line of Your Message.

The F6FBB Server has been established to help Sysops and Networkers alike, in providing help and information in a timely manner. Sharing of software and other miscellaneous information via the server is quite alright.

Dear anyone,
I don't have a liscense, but I bought a ham radio recently and was thining
about opening sexually explicit gay chatline through info packets over the
air. Is there any way the government could monitor these conversations,
as some of them could possibly involve underage men. If anyone is
ineresting in subscribing to my packet service, feel free to contact me or
DeanSf@aol.com.

Thanx,

Does anyone know of an internet/packet gateway where by I could send/receive
my packet mail? Then I could just change my home BBS to the gateway and presto.

I realize that there is a very slight threat of someone without
a license putting traffic on the air, but if you preregister with the gateway,
prove you do indeed have a license, then whats the problem?

I am trying to get a TCP/IP system up and running. I can get it going but there
are
many things that don't appear quite right. E.g. routing. I am using Jnos 1.10b.
Does anyone have a UK style autoexec.nos that I can have a look at?

E.g How do I make the system pick up news automatically?
How do I get it to send mail, also how do I find the route to use?

Does anyone know of the existance of a packet driver for KA9Q etc... for
a 3Com dedicated server box. Its a 3Com 3S400 machine and the ethernet port
is part of the motherboard. Ive tried all of the 3C5??.com drivers and as
i expected non of them work. Any one got any ideas.??

a peek at the the Clarkson source code and a comparison to the 3S400
might give a glimmer of hope that a reassemble might do the job.
If you do not have a Assembler, but have the address etc. pertinent data,
I'd be happy to do the work and mail the (small) binary

TheNet X1J Release 2 packet Node software.
==========

I have just uploaded the latest release of TheNet X-1J Release 2
to :-

oak.oakland.edu /pub/hamradio/incoming

Dave (G8KBB) and myself (G0JVU) have been beta testing it for a
few weeks with a selected few sites around the world.

This release includes several new gadgets for X1J node operators
and users.

The node now supports four Analogue input ports:-

Port 1 is for the previously announced Deviation meter
Port 2 is for the new Signal strength meter addition
Ports 3 & 4 are general purpose input ports.

I have used port 3 for a temperature sensor and port 4 for a psu
voltage monitor in my local test nodes. I have included a document
(in MS WORD format) called HOTNCOLD.DOC for anybody who wishes to
attempt to add the temperature sensor to the node.

I would be happy to hear of any other uses these ports get used for
around the world.

There will be no PCB this time! Especially as ports 3 & 4 are user
defined!

Best of luck with the product.

73 Neville

Lines: 28
Message-ID: <2r5amu$54n@panix2.panix.com>
NNTP-Posting-Host: panix2.panix.com

Could someone please explain to me how to do this?
I have two machines, one running OS/2 and PMNOS, and
the other running DOS and (nothing yet).

I just want to be able to telnet, ftp, etc. from one to the
other.

They will be connected via the serial ports.

One of them is [44.68.24.33]   n2sxx.ampr.org
The other is   [44.68.24. 6] linkup.n2sxx.ampr.org

For a minimum of hassle, could someone please recommend
1) what NOS software I should run on the dos machine
2) would I be better off running qvt or some other windows tcp/ip
   on the os/2 machine (PMNOS isn't very good)
3) please help with autoexec.nos settings to get SLIP or PPP up
   and running.

Thanks very much.

I am new to packet radio - initially using HF - so please
excuse me if I appear totally ignorant. I'm getting into
packet because it appears to be a great way of sharing
information. Out of idle curiosity, I was wondering whether
there might be any way of accessing the internet via
amateur packet radio ?

I think that the licensing laws in the UK mean that a packet to internet
gateway wouldn't be alllowed, unless only Internet messages from radio
amateurs were read, which would be a bit restrictive.

I believe that there was an experimental BBS, GB7JAN a couple of years
ago which acted as a gateway but it was apparently closed down.

I looked into setting up a gateway but although it is not definitely
finished I don't think that it is possible for the project to go ahead.

Hope this is some help..

Hello.

It comes to mind that some of you may have an interest in Nikola Tesla
and are not members of the Society. If so, you might want more info
on the 1994 International Tesla Symposium (or other ITS activities).

We have a brochure on the Symposium of about 20 pages that we sent to all
ITS members. We printed extras and will send you one if you email your

snailmail address to me at the Society's Internet address:
tesla@cscns.com (Offer good only while supplies last.)

The conference will be July 21-24, 1994 in Colorado Springs, Colorado.
Speakers and already registered attendees are from all over the U.S. and
several foreign countries. If past Symposia are any indication, a good
time will be had by all.

Dick Corner, Volunteer, International Tesla Society.

I have heard a legend that a college radio station (either at MIT, Tufts,

or Swarthmore) welded antenna to railroad tracks, and peeved the FCC by
broadcasting nationwide. Is this true? If anyone knows, please email me
(or post here) If you do know, could you please direct me to some
documentation regarding this legend if you can.

This is very important! Thanks in advance.

Commencing on Friday, June 17th, the International
Tesla Society will be presenting weekly science radio
programs hosted by J.W. McGinnis, President of the
I.T.S.

All fields of science will be covered in these weekly
shows to be on short wave 7.435 Mhz at 10PM Eastern.

On the 17th JW will interview Dr. Tom Levy on the
FLUORIDATION CONTROVERSY. Is it good or bad...
Tune in, listen, then YOU decide!

Don't miss it!

Dick.

Can someone tell me what freqs the 9600 bps packet activity is on in Arizona,
preferably the Phoenix/East Valley area? I'd be interested in TCP/IP or
'regular' packet. I just picked up a PK-96 and will be ready to give it a try
as soon as I make up a cable. Any info will be appreciated.

Hello *,

very low traffic in this conference ...
... maybe I can trigger some ...   ;-)

I plan to become a radio amateur and am interested in packet radio.
Then I'll buy a 2 m and/or 70 cm handy. This unit must also be capable
of packet radio. 9600 baud should be possible.

Can anyone recommend specific brands of handies for this purpose?
Until now I've heard different opinions if handies are suitable at all,
and if - which ones.

Tnx,
     Detlef.

I have had some trouble with lan link in sending mail to a BBS, now either the
software is badly written, or the BBS is badly written.

Lan link waits for a response to send mail after sending the SP Callsign,
it looks for the subject string. FBB uses H-Routing on our local BBS and sends the
string H-Routing to GB7GFD followed by Enter Subject for message
Now this is fine, Lan-Link is primed to look for H-Routing as it insists on only

taking the first line of input.
When you come to send a second message, the BBS understandably does not bother to tell you it is H-Routing, so just asks for the subject. This means lan-link will never send the second message.

Software that does not work is of no use, so how can I get it to work? Is it simply
not compatible with FBB BBS? I have had various other problems as well with the interface but it is the only game in town as far as I know. I am sure the authur has writtne a good piece of code, but the method of communicating with a packet BBS
needs some attention.

Also, has anyone managed to get it to work with an ICOM rig? I have tried but without success.

Mike

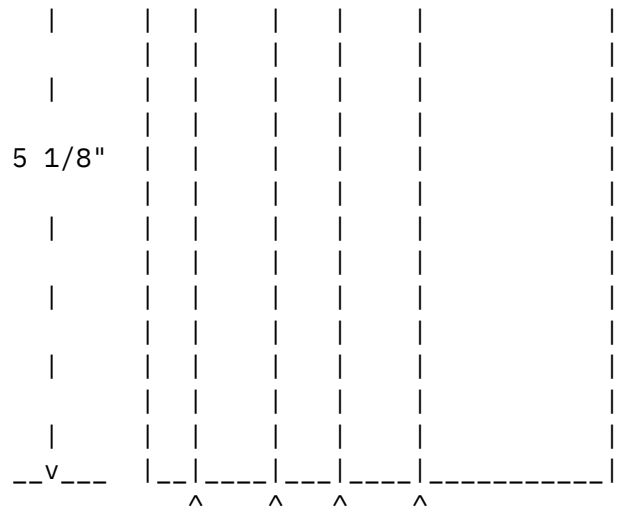
MiniSport Laptop Hacker - Vol #22. July 1994
To discourage pecuniary interests, Copyright (c) 1994 Brian Mork



>>> ADMIN
The MLHacker series is formatted to print out on 8.5"x11" sheets manually fed into an Epson LQ-850. I print at 8 lpi, which gives 82 lines per page. Back issues are available from ftp.cs.buffalo.edu in the \pub\msdos\ham-radio directory. E-mail server ham-server@grafex.cupertino.ca.us also has them in the directory \hamradio\newsletters. Note in the signature block that my Packet Radio has changed.

>>> ALTERNATE BATTERY SOURCE

In April Jim forwarded me results of his efforts to modify 9.6 volt Makita power tool batteries. Cut directly from his Internet message, here are his observations (thanks Jim!):

> "Just the other day I did something I've been dreading for 6 months. I removed the stock battery from my Zenith ZL-2 Minisport and connected a variable voltage power supply directly to the computer's power terminals. After adjusting the supply to six volts, I powered up the computer and verified that it was working properly. Then, taking a deep breath, I slowly cranked the power up to ten volts. No explosions, no complaints from the Minisport power supplies, It took it just fine. Great, now I can use my 9.6 volt Makita batteries with the laptop as part of my portable packet station.
>
> "Since the internal Zenith supplies are all switchers, current drain is inversely proportional to battery voltage. This means no power is wasted regardless of whether the voltage is 6.0 (stock Minisport battery) or 9.6 volts (as in my Makita pack). I measure 450 - 650 Ma drain with a 6.0 volt source (depending on backlight brightness), but with a 9.6 volt source, only 340 - 425 Ma is needed. The Makita batteries are about 1400 MAh capacity and run my ZL-2 for 3 hours with the backlight on full. Obviously, a 7.2 volt external would work also, with proportionally reduced operating time.
>
> "I had to make a better way to get the external power to the machine than the alligator clips I was using. I thought I'd share what I built with you all. Here's how to make a fake battery pack for your Minisport.
>
> "Begin by cutting a 2 1/4" by 5 1/8" piece of single sided glass epoxy Printed Circuit board material. Remove 1/16" strips of copper along five lines as shown in the following diagram.

Remove copper along these four lines

"Drill the two holes close to the edge so solder will not interfere with the power contacts on the machine. Only the two small rectangular areas with holes will actually be energized. Isolating these minimizes the possibility of short circuiting the battery. Nevertheless, you should always disconnect the external battery when the fake unit is removed from the computer.

"You can remove strips of copper by double scoring the material 1/16" apart along the indicated lines, then gouging out the metal with a knife or wood chisel. With some patience, you can also do it with a hacksaw or a hand grinder. My favorite method is using a 1/8" drill bit in a small drill press as a router. I raise the table until the PC board is just touching the drill bit. Then one or two thickness of 3 x 5 card under the board raises the copper just enough so I can route out metal along the lines by moving the board under the bit while it's turning at the highest speed. I have a piece of wood with a vertical fence screwed to one edge that I can "C" clamp to the drill table to help guide the PC board while routing.

"You will need to solder a power cable directly to the board, or glue some sort of jack on the board to accept a power cable through the battery cover hole. The NEGATIVE terminal is nearest the front of the Laptop. The POSITIVE terminal is the rearmost. You won't need a connection to the center terminal, it is used by the Minisport charging circuit. Use a minimum amount of solder and file the solder bumps down smooth.

"Complete the fake battery by gluing a block of wood about 1 inch high to the glass side of the PC board. This takes up the slack in the battery compartment so the board is pressed firmly onto the computer's power terminals. You will have to sand the block to just the right height, or glue on strips of cardboard for extra height if it's too short.

"One problem with using a higher than six volt battery with the

Minisport is that the low battery voltage alarm doesn't work. It appears that by the time the 9.6 volt pack is discharged far enough to trip the alarm, it's going down so fast that there isn't time for an indication. Save your work often if you're near drop out time. It should be possible to construct a separate discharge alarm on the fake battery board that will trip at a higher voltage and give a couple of minutes warning.

"I have also created a real battery pack for my Minisport by using one of these routed out PC boards, and hot gluing five "C" size nicads to the top. It works as well as the 1700 MAh Minisport batteries but I have not figured out a way to use the Minisport charger. Also the exposed battery power terminals on the bottom require care to avoid short circuits.

>>> DRIVE EXPANSION PINOUT
On the back of the Minisport is a small plug with a rectangular external form and an internal "D" shape. I have been unable to identify a source for this connector, but several people have asked for the pinout. Here it is, compliments of wa8wzx. The top row of pins 1 through 19 are all sequential odd numbers. The bottom row has pins 2 through 20. Pins 4, 10, 12, 19 & 20 are all ground. Others are:

1 Disk Change	2 Side Select	3 Read Data
5 Write Protect	6 Track 0	7 Index
8 Write Enable	9 Write Data	11 Step
13 Direction Select	14 Drive Select 2	
15 RPM	16 Motor On	17-18 Vcc

Please provide feedback!
73, Brian

TO ALL HAMS USING PKGOLD ENHANCED

I have ran into a problem with the latest version of PKGOLD Enhanced with Pactor. It seems to exit the program with the following:

DISK ERROR 100
DISK READ error
record -1 in GOLD.BD

This is found on the screen after the program dumps out. Timing of the exit from the program is random meaning 5hrs or 1hr after loading the program and has even done it while in the connect mode as well. It

will
leave the TNC open so that the buffer fills up and no connects can happen. Having the ***SAME*** version for the Kantronics TNC (KAGOLD) for use with the KAM+ and the KPC models and using the ***SAME*** computer
WITHOUT ONE problem at any time and I can leave it without worry
PKGOLD I can not do that at all. (also tried it on other computers with the
same results)

One other problem I have notice is that opening a connect window it is full of junk chars which should not be there. ?????????? (PKGOLD ONLY)

Interfex claims it doesnt have any problems and thinks it mine. Why can
I run the same versin for the Kantronics TNC without any problems but yet I can not run the PKGOLD (extra cost) with the AEA products. (PK-232, PK-88, PK-96)

Also how many commercial programs leave out the manual because you have it
with your other versions of gold

Has anyone seen or have the so called DUALPORT PKGOLD yet.

Has anyone received a notice of upgrades on PKGOLD or KAGOLD.
It seems that there has been many since Version 9 date 3-15-94
and REGISTERED users are **NOT** notified like other commercial
software.
It seems that they now have more upgrades than AEA eproms. Its
seems We the users must keep updated ourself by AT&T. At nearly
$100.00 per-model version we could get notified. My mailbox is
always full of upgrade notices from other les costly software
companys.

I have been using one for about five or six years with no difficulty
whatsoever. I am using a commercial battery (like a car battery, but different
current delivery) being charged by a little lab supply trickling, but for a
while I used the internal. I stopped that because the battery didn't like
being charged all the time. Other than that, the internal battery would be
fine.

Keywords: Savant SoftKiss

I am having difficulty with Savant and SoftKiss on a Macintosh PowerBook
Duo 230. I cannot communicate with the modem (PacketMac). The system
behaves as if I did not set SoftKiss to Kiss mode (which I did). The
transmitter key and stays keyed and I cannot send or receive any packets.
The same software and setup works fine on my Quadra 800. Anyone have any

ideas? Here are the specifics:

Mac PB Duo 230
System 7.5
SoftKiss v1.8
Savant v1.0.2
PacketMac modem

Thanks in advance!

  Forgive me if I missed a newsgroup or two in my newsgroups line, but to all
who do read my message, I was wondering if anyone has ever created a ham packet
version of a token ring (preferably with 9600 bps and tcp/ip)?

In a normal AX.25 packet network, the "hidden" transmitter problem
will cause some collisions when all stations can not hear each other.

A marginal link will also cause retransmissions.

In a token ring/token buss configuration, in addition to transfering
the actual data between two stations, you must also be able to pass
the token from station to station in a sequential way. If all stations
can not hear each other directly, the sequence must be ordered in such
a way that each station can hear the previous station and be able to
pass the token to the next station in the sequence.

If you have marginal links (e.g. QSB), the token can get lost. The
remaining stations will eventually recreate the token and reconfigure
the ring and the actual data traffic can resume. If this happens
frequently, it will reduce the total throughput, even if no data is
transmitted from the station with marginal links. In a normal AX.25
CSMA (Carrier sence multiple access) network the total throughput

is reduced only if there is actual data from the "hidden" station
(due to collisions).

If a link fades in and out in a token ring system, there is always
the risk that the ring is split into two or more independent rings,
which is a really nasty thing in this kind of network.

IMHO, a token ring network might even work, if each station can reliably
hear each other, but if you have hidden transmitters in the net,
there is a risk that at least the standard token ring protocols
might loose the control of the situation.

I have seen the following problem repeatedly on my Baycom modem,
irregardless of many parameter changes. If anyone has seen this or knows
what may be causing it, I'd appreciate it.

(BTW, I run an MFJ1278 in this same enviroment without any problems and
W5SYT is very close to my QTH)

I am looking for a gateway to pass Internet SMTP (e-mail)
messages to a Packet Data Radio mailbox. Any information
would be greatly appreciated. I am not knowledgeable about
radio, but would like to exchange email to a family member
with a radio system.

I can be reached on the Internet or by Phone.

Jim,

I do not have the info here at work. My advise is to use the local radio
newsgroup, triangle.radio, and ask there. I'll look it up. 147.54 sounds
right, and try connecting to the K4IWW-3 and query the nodes. One or two
there should be TCP/IP.

THE KEY TO ORGANIZING YOUR HEALTH RECORDS

"If you care about yourself and your children, you will do everything you can to know your family's medical history. It can save your life, and the lives of those who are dear to you." -- Dr. Aubry Milunsky, Director, Boston University's Center for Human Genetics (Life Magazine, March, 1995).

Your Lifetime Health Planner offers the simplest, most effective way to take charge of your health. Enter important facts about your health history, keep a record of the names of medications and their effects, document each doctor visit and diagnosis. You will have the information you need, and in the event of an emergency, so will your family.

Your Lifetime Health Planner, 198 pages in a compact, loose-leaf binder, contains a variety of sections which include "Doctor Visits," "Medications," "Family Health History," and "Doctors and Specialists." The Planner is a must for the busy executive who needs to stay organized, for seniors who are receiving care and for newborns who need a record of their health care.

Parents Magazine recommended the Planner to its readers (April, 1994) and MCI called it "a useful resource in managing your personal health records." Margie Smotherman, Coordinator, Employee Health and Wellness, Blue Shield/Blue Cross of Iowa, said: "The employees felt that these (Planners) were great tools to not only record their pertinent numbers, but to plan for doctor's visits."

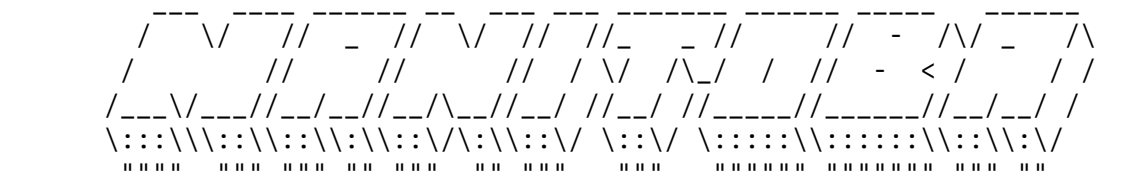
Do the sysadmin a favor and don't send anything to this address.



I emailed postmaster at the site and got back a message (most likely
an auto reply). The offending account has been canceled, and the
sysadmin is doing what he can to cancel the messages. He also noted that
he got 1400 (!) messages about the problem.

So, it looks like it is under control.

> Is it possible to run packet radio with an HP200lx 2mb palmtop computer?

I run KaGOLD (deleting all the space-wasting, never-consulted help files and all that BS) on my HP200LX 1MB with 5/10 flashcard, one of my KPC-3s, and an Icom W2A HT (I also have a cable to connect to the T741 in my car. THAT is a hard thing to find...). I use a Quantum Ham Battery to power everything (serial port activity can wipe out the HP's batteries really quick). I bought a video-camera bag at a camera store to hold it all. The QHB fits in a detachable zippered compartment in the bottom, and I use a Radio Schloque suction-cup mount to stick a half-wave antenna wherever I need to. Currently I run cables out the bottom and into the top, although when I get smart enough about how I want the harness configured (I still have to add in my GPS-45 for APRS portable and standalone tracker use) I will cut holes to run them inside the bag.

Hope that helps...

-Greg

Sure you can, but you will need to buy a TNC to hook the hp200lx up to.
If you send for a catalog from PacComm (They make TNC) they have an
artice in the front cover (Autumn-Winter 1994-5 Edition). Their phone
number is (813)874-2980. If you want to chat more let me know. I'm also
a licensed ham (only tech no-code just can't seem to learn morse)

I've been using Baycomm on my 1mb hp100lx without a problem. Works fine
and you don't need a TNC, just a little modem built into an rs-232
connector hood.

Cheers,

I have an MFJ-1270b TNC-2 clone that had the wonderful XR2211
DCD mod done to it. (It enables you to run full-open squelch)
However, I was using the TNC with an old Motorola Micor radio.
Things worked fine.

Fast forward 1.5 years to now. I tried hooking up my Icom 2GAT
handheld to the TNC with the MFJ cable. I installed Jumper K
as directed and the radio would not transmit although the TNC
was trying.

Ultimately, I found that the DCD mod was the culprit. It
inhibits the TX signal from getting to the radio somehow. I'd
rather not run without the DCD mod because it's nice to have
the TNC know the difference between noise and digital info.

Has anyone else noticed this? If so, what was the fix? (other
than another radio)

BTW, for those with this TNC, GET THE DCD MOD if you haven't!
(and are not running an Icom HT) It will be the best $15
you'll spend in ham radio. The mod is a kit that takes about

45 minutes to solder up.

In that the 1270b already uses a 2211 demod, open-squelch CD was built in
at the factory. What kind of mod was done to it?

I have seen this on ocassion on frequencies with birdies and with the rare
rig that produced very little white noise on open squelch. Perhaps
someone with 2211 savvy can suggest changes to the dcd filter that'll make
it less sensitive. Have you tried reverting to the onboard 2211 cd to see
if it handles things better?

Absent that, the fix may involve remove the mod. If the mod was needed

then there are probably other problems in the onboard demodulator.

 :

Likely to be redundant; see above.

Sure, I do it using the built in com program on the 100 with 1mb a Kantronics
KPC3 TNC and either a handheld or mobile rig. I have done mobile packet in the
car but is gets kinda hard on the freeway. Good luck...

Lines: 33

I have uploaded to the SimTel Software Repository (available by anonymous
ftp from the primary mirror site OAK.Oakland.Edu and its mirrors):

pub/msdos/ka9q/
pcelm32.zip   Mailer for NOS, UUPC, WAFFLE & other systems

PCElm is a mail user agent (UA) with a user interface closely modeled
after the USENET ELM. To avoid confusion, we would like to mention that
PCElm and USENET ELM are *not* related.

PCElm is intended to be used as a drop-in replacement for BM when using
the KA9Q NOS package or as a replacement for mail.exe when using UUPC.
It can also be used for other mailsystems, as all relevant things for
compatibility with MTA's (Message Transfer Agents) are configurable.

Hilights:

PCElm has a nice user interface, with easy to learn and easy to use
commands. UN*X users will already be familiar with the more important
commands. It can be made to work with just about every mail system
there is for PC's, as PCElm makes no assumptions at all about the
underlying network software. Finally, PCElm is multilingual; you can
make all messages appear in your favorite language. Message files for
English, German, Spanish and Dutch currently exist.

Uploaded by the author.

pelm32.zip has replaced pcelm31.zip.

Hello!

Just a simple question. Is there any FAQ for this group? I'm planning to start to learn what is packet radio. So I should know what is the equipement requiered, how does it work, etc.

The Hamblaster Update

The Hamblaster will be introduced at this hamfest.

JANUARY 1994

Jan 30, Sunday: Odeum, Villa Park, IL - Wheaton Community Radio Amateurs hamfest. Odeum Expo Center. 8 AM - 3 PM. Tickets $6 advance, $8 at the door. VEC testing. All flea market tables reserved. To reserve a table, call (708)231-2428.

Over the past several months I posted updates about a DSP "The Hamblaster" that Will Torgrim (N9PEA) and myself are developing.

We are focusing our efforts on a packet modem that allows the user to improve H.F. reception by interfacing the Hamblaster (a PC compatable DSP sound board) to a transceiver and a packet or all mode TNC. Modems/filters for RTTY, Packtor, Amtor are also under developement and are compatable with the same control panal software.

Here are the latest developements

1) We do Windows! There's a receive/demodulator control panal that allows me to control the FSK demodulator's filter center frequency using a mouse driven slidebar. There's also an on screen tuning indicator that mirrors the tuning slidebar. You tune the filter by moving the mouse cursor over the filter tune slide bar button and when you press the left mouse button the slide bar button moves.

2) An option allows me to lock the tuning indicator to the "Filter Tune" slide bar. The Hamblaster sends frequency information, that it hears at the output of the first filter, to the PC via the PC's I/O epansion port. Even in noisy conditions it can count the center frequency of an FSK signal. The tuning indicator does jump around in noisy conditions

3) A new Windows control panel provides an on screen digital storage oscilloscope. By pressing the "SNAP SHOT" button, you can capture 4 signals and display the traces in a graphics window. The traces can be resized or you can move the window left or right. About 100 ms per trace is aquired.
You can select or attach the 4 traces to any of the signals that are displayed on a block diagram in the o-scope control panal. The Hamblaster captures the signals and stores them in it's own memory. Then the PC gets the data from the Hamblaster via the PC I/O port and stores it in the PC memory. The software displays the aquisition by getting the data from the PC RAM.

The process takes about 2 to 3 seconds (the DOS version takes about 1/2 the time to execute).

4) Using Windows multitasking, you can run the Hamblaster software and your favorate a packet program (like PC Packratt). I was even able to run two instances of the same Hamblaster software. Both control panals displayed the tune bar and responded it real time. I also got two o-scope aquisitions.

1-3-94

5) We now have FFT analysis software built into the o-scope control panel. When you click on the "Freq" button the audio spectrum is displayed. You can move the mouse cursor over the display and where ever it is positioned, the frequency is displayed in the status window. When you click the mouse the modem filters jump to the frequency. This feature provides a simple tuning aid.

   Another button allows you to convert all 4 traces (mentioned in paragraph 3) to spectral displays. You can, for example, analyze the frequency at the input signal, the modem prefilter and the mark filter output. Based on the FFT, a second button allows you to modify the filter tune limits by clicking on min-max limits that you select.

I have to admit, After I debugged the FFT software and I getting the control panel working to my satifaction, I got hooked on the operation of the Hamblaster system. I spent hours tuning the 40 and 20 meter bands, displaying the FFT and copying CW/RTTY signals through the Hamblaster filters. The FFT really simplifies the tuning process.

Ongoing developments;

1 Post detection carrier detect.
2 HDL protocol decoding
3 Morse code detection/regeneration
4 Adaptive voice filter.
7 DTMF & PL tone detection.

I am a relatively new ham trying to get into packet, etc. I plan to
acquire an AEA PK-232MBX for use with a Macintosh Powerbook 165. I will be
using a Yaesu FT-5100 on 2m, and an ICOM 729 for HF. Question: does anyone
know of a source of ready-made cables for connecting the Yaesu and the Icom
to the PK-232MBX?

If required, my e-mail address is tbrunner@uci.edu.

Check out the MFJ catalog; they offer some. It is pretty easy to wire up
your own cables, 'tho. Only a couple of connections needed.

Approved: w8sdz@SimTel.Coast.NET
Lines: 33

I have uploaded to the SimTel Software Repository (available by anonymous
ftp from the primary mirror site OAK.Oakland.Edu and its mirrors):

pub/msdos/ka9q/
pcelm321.zip   Mailer for NOS, UUPC, WAFFLE & other systems

PCElm is a mail user agent (UA) with a user interface closely modeled
after the USENET ELM. To avoid confusion, we would like to mention that
PCElm and USENET ELM are *not* related.

PCElm is intended to be used as a drop-in replacement for BM when using
the KA9Q NOS package or as a replacement for mail.exe when using UUPC.
It can also be used for other mailsystems, as all relevant things for

compatibility with MTA's (Message Transfer Agents) are configurable.

Highlights:

PCElm has a nice user interface, with easy to learn and easy to use
commands. UN*X users will already be familiar with the more important
commands. It can be made to work with just about every mail system
there is for PC's, as PCElm makes no assumptions at all about the
underlying network software. Finally, PCElm is multilingual; you can
make all messages appear in your favorite language. Message files for
English, German, Spanish and Dutch currently exist.

Uploaded by the author.

pelm321.zip has replaced pcelm32.zip. This is a bug fix update.

I have uploaded to the SimTel Software Repository (available by anonymous
ftp from the primary mirror site OAK.Oakland.Edu and its mirrors):

pub/msdos/hamradio/
flexpac4.zip   Hams: PacketCluster(tm) Terminal w/ headings

FlexPac is a Packet Radio TNC software package. It enhances the use of
your DX Cluster. Displays country name, beam heading, and more. See
Jan 1994 CQ page 70.

Some of FlexPac's functions:
  - optimized to work with the PacketCluster (tm)
  - separate windows on the screen for output from the TNC, and your
    keyed input - output appears simultaneously, even as you are
    keying   - supports two simultaneous sessions (streams) in
    different windows
  - user defined scripts that can automatically process
    logon, logoff, and other complex functions; this includes a
    WAIT function so that you can synchronize your script to the system
    you are connected to
  - pull down menus to easily select options
  - the ability to schedule an event at a future time
  - easy user function key definition
  - capture of received data to a disk file
  - optionally calls you by an alarm when someone connects to you
  - you can edit the line you type, before actually sending it to
    the TNC
  - power typing with word wrap (use when sending messages)
  - full log function with quick dupe (not in shareware version)
  - displays country, beam heading, and distance on DX spots

System requirements: IBM PC, PS/2 or compatible, DOS 3.1, 512K RAM, com1
or com2 serial port and a TAPR2 type tnc (will not work with DRSI boards).

ShareWare. The author's E-Mail address is: TJTW74A@Prodigy.COM

Hiya folks. Posted for a ham w/o net access:

He's looking for a file called BPQAX25.EXE. I've looked through the
net and come up with naught, so I can only assume that its some part
of an archive or something. I'm the new ham on the block and I'd dearly

like to solve this little problem for one of the oldsters :).

Anyone give me a point in the right direction?

Thanks!

There are several cable companies in the area that will do this at
about 4 to 8 $ a foot but like previous messages have said learn to
make your own cables and understand what the signals do. This is amateur
radio, it is better to learn this now because it wont be the last time
you have to make up cables for something. Good Luck ! You might also
get a copy of the ARRL Amateur Radio Handbook, about the best 25$ you
will ever spend, lots of good skinny. 73 Chuck Gould, N4YXW.ampr.org

Is anyone aware of bugs in the Kantronics KPC3 TNC software version 5.1?

I've noticed that if you send a message to "ALL" in the PBBS, no one
can read it (or list messages) other than the sysop and the message
originator.

If you send a message (actually a bulletin) to "ALL" using the "SB"
command, the problem goes away. Changing the flags on existing
messages addressed to "ALL" so that the message then becomes a
bulletin, also fixes the problem.

Apparently, when you send a message to ALL, the "ALL" text is
treated as a call-sign and can only be read by a person who
has that call-sign! He must get lots of mail! ;-))

I've heard that there are other bugs related to message forwarding.

So is version 5.2 out yet? ;-)

I realize that this in not a forum in which the advertisement of houses for sale is a generally accepted practice. However, this particular house would be ideal for those who have always wanted a tower to put an antenna on. The tower is a 51' three-section hand-cranked unit. It is mounted on an approx. 6'x3' slab which is as much as 6' deep directly under the tower. It was installed with all the necessary permits. The house is being sold by my parents who have just retired and are moving to the Sierras. I have included the information from the realtor's flyer below:

Unique Home situated on an Extra-Large Corner Lot in the "North Gate" area of Fremont. It's conveniently located within walking distance to schools, shopping, an AC Transit Bus Stop, and just minutes away from I-880, I-84, the Dumbarton Bridge, and B.A.R.T. for the commuter in the family.

Features...
* 4 Bedrooms (1 Bedroom currently being used as a Photo Darkroom)
* Tiled Entry Foyer
* Window Coverings
* Family Room w/ Chicago Brick Fireplace
* Interior Painted Approx. 5 years ago, some areas within the last year.
* Kitchen Includes: Built-In Range/Oven w/New Range Hood, Dishwasher, Tiled Counter Tops, and Dining Area
* 2-Car Garage w/ Auto Door Opener, Some Storage Cabinets & Shelves
* 2 Baths w/ New Sinks, Commodes, Shower Tile, & Lino Floor Covering
* Hardwood Floors Throughout with Some W/W Carpeting & Linoleum.
* Formal Living Room
* Composition Roof 3 Years New
* Extra Large Lot w/ Auto Timed Sprinklers & Drip Water System in both the Front & Back Yards
* Backyard has Patio, Fruit Trees, a Storage Shed and 51' Ham Radio Tower
** Approx. 1504 Sq. Ft. of Living Area **

Asking $219,950

The default message type for the 'S' command is "Personal" or "send personal", "SP". Personal messages can only be read by the named recipient of the message. (And anyone monitoring the network as the message goes by.) The sysop has superuser privileges and can do anything concerning the operation of a bbs, including read any mail.

If you want to send a bulletin you need to use the "SB" command as you have noted. The bulletin flag indicates that the sender wants the message to be able to be read by anyone. This syntax is very typical of the software design of most BBS programs and other ham packet software. You might disagree with the design philosophy but it is

certainly not a bug. This command syntax dates back to the original
W0RLI bbs software.

The message type is used to help BBS programs forward mail messages.
When personal mail is forwarded it is deleted by the bbs doing the
forwarding. When a bulletin is forwarded it is not deleted. It is
kept around so that others can still read it.

In the USA we can usually determine good versus illegal callsigns and
could probably make some determination. But with world wide callsigns
this is not so simple. It is better not even to try. It would be
incorrect too many times.

$SOAPBOX ON$

What we really need on packet is to do what USENET has been doing for
years. We need to separate personal mail in our own personal mail
boxes from news articles. Then we would not need the message type
indicators. The packet paradigm of having everything in one big
mailbox is just not as efficient for large volumns of traffic.

This is normal...this is the default behaviour on most BBSs....

'S' is equivalent to 'SP'...send private.

I routinely make this mistake on full service BBSs, NOS systems, my

own BBS. Makes it real hard to other people to read bulletins, I'm told.

We do: it is SP vs. SB that *is* that exact separation.
The "P" and "B" are simply tags that indicate into which bin
the message belongs. On this computer here at work, the difference
is that one pile is in one directory (/usr/spool/news), the other
pile is in another directory (/user/hanko/Mail). However, I cannot
access both with the same tool - to produce this message I had to
use a "news tool", but to send you email I have to use a "mail tool".
What a pain.

Most bbs codes provide commands to manipulate the different
message classes in different ways.

IMHO what we *really* need to do on packet is adhere more
closely to RFC-822 (and it successors), where that is appropriate,
and establish a usenet-news-like distribution.

Yes, I know "tcp/ip will solve all these problems."
When it does, I'll use it.

Hi, Folks.

It is with a heavy heart that I list the following items for sale.

Manuals and documentation are included with each item.
Prices listed below are with U.S. shipping included.
Make an offer on any item you think is overpriced.
For everyone's protection, ALL transactions will be C.O.D.

AEA PK-88 Terminal Node Controller, 110V pwr supply 110.00
   firmware revision 23.AUG.91

Alinco DR-110 2m mobile FM xcvr 5W/45W, bracket, hardware 250.00
   rcv/xmit 130-170 MHz modification made

Alinco DJ-160 2m HT xcvr 0.3/3 Watt (2 nicad packs & chgr) 250.00
   rcv/xmit 130-174 MHz modification made

Astron RS-20A 12VDC - 16 Amp (20A peak) power supply 120.00

Bencher Iambic paddle set (nickel on black base) 60.00

Heathkit HW-101 HF xcvr, pwr supply 250.00
   note that this includes shipping on the *heavy* pwr supply

HP-48SX calculator, serial interface cable 200.00
   rom revision E

HP Equation Library card for HP-48 50.00

HP 82240B IR-printer, PC interface 90.00
   This is the newer printer, not the original

HP-95LX palmtop computer, 512K PCMCIA card, PC interface kit 250.00
   this is the 512K model (pre-1M), but with accessories

MFJ 945C 300W antenna tuner/meter/balun 90.00

MFJ 407B "Deluxe" Electronic morse keyer 55.00

Realistic PRO-2021 scanner 150.00
   200 ch in 10 banks w/ search - This was a top-line scanner
   in the days when UHF-T was the highest frequency of interest,
   still good in areas where not much has gone above 512 MHz.

Realistic PRO-43 scanner (w/ cellular mod performed) 275.00
   The handheld they're not allowed to make anymore.

Regency HR-2B 2m 12 ch. xtal mobile xcvr 2W/10W 60.00
   Note! This is an older model, but with good power. But not
   enough overload protection or selectivity for congested areas.
   Xtals for a few popular freqs included. Good radio for
   smaller cities or rural areas, though.

Sony ICF-2010 SW receiver 250.00

Cheerio!

I am about to purchase a DRSI DPK-9600 TNC. Has anyone had any good
or bad experiences with the TNC? I will be interfacing it to a TEKK
DataRadio on 441.050MHz.

Also, HRO seems to be backordered on this TNC, and other good sources
for the DRSI TNC?

Thanks & 73,
Mike Crowder

Greetings,

Just was wondering if anyone knew how to access the packet
program files and ham maps at U. of Maine. I just tried to
get them through anonymous ftp at ftp.umcs.maine.edu and was
denied access. They are in the directory pub/ham-radio/packet,
but for some reason they are apparently closed. From listing
the directory there are also files on antennas and the FCC
part 97. Has anyone else had this problem?   And, does
anyone know how to obtain ftp access to these archives?

Thanks for any help or info....

Hi,

I have a couple friends who work in Tanzania right on Lk. Victoria (no
phones, mail takes 3+ weeks). I know they communicate with home base in
Pennsylvania on a weekly basis via amateur packet radio.

What would I have to do (need) to also be able to write/talk to them. I
understand there are internet<=>packet gateways. Any chance of using these
and not having to purchase huge $$$$ of equipment? I assume I would need
their call ##s.

Any info would be much appreciated.

Thanks

Dave

    ~~~~~~

I have just got the v2.12 KA9Q NOS from Demon Internet Services.
Before I start to add my own bits to the NOS I decided to compile the
whole thing 'as is' (having been caught out in the past !).
I have hit a little problem - in smtpserv.c there is an inclusion of
nit.h, and I can't find that file in the .ZIP from DIS. Could someone
please point me to or supply me with this file.

TIA

Mike.

Does there exist a mail gateway on the Internet that I can use to send and
receive EMail from someone who has a packet MailBox, but no access to the Net?

If anyone can help, please reply by EMail as I do not receive any of the rec.*
groups.

Thanks in advance,

Peter.

No,
        You have to buy it! NIT.H is part of the Netware C Interface
   for DOS. This is the old Novell SDK for netware clients. I think
   they have changed the name now, but in any case they have changed
   the SDK completely, (I mean start rewriting code time ;-() to bring
   it inline with client API's for OS/2 and Windows. ;-)

   So the moral of the story is :
      undefine the NOVELL option and try to recompile, if that still
      asks for nit.h you should be able to safely bracket the #include
      between a #ifdef NOVELL and #endif.

   Hope that helps.

Unless I am mistaken this file is only needed for the Novell aware
build. I also believe it is copyright Novell.

Try building it without NOVELL defined. (The distributed makefile
does not define NOVELL)

Hi;

I would like to get started in packet radio, more specifically, access to the
Internet through a Sun Sparcstation. I am an experienced system administrator,
however, I have very little experience on the radio side. Can someone point me in
the right direction? I'm looking for white-papers, howto's, FAQ's and any other
material that can help me to get started.   This will be strictly for my personal
use at home.

I definitely need full service TCP/IP so that I can pull news and ftp files, run
Mosaice, etc.

Thanks,

Roger Spicher

I'm this kind of person who always want to do more with less. I'm
looking for a new challenge.

I LOOKING FOR A WAY TO DO PACKET WITHOUT HAVING A TNC...

I own a PC XT with internal 1200 bauds modem and also a MAC+ with an
external V32/42bis ComStation V modem.

I don't know that much about PACKET, but is it possible using that
hardware (one of these two platforms) and some fancy software to start
doing PACKET. Am I crazy or is it a good challenge?

My rig is a FT-530.

Thanks for your help

Yes, it is very possible and happens multiple times a day. For
instructions send email to:

Hello, I am looking for some help compileing JNOS with TURBO C
I have TURBO C/C++ 3.0 and have tryed to compile JNOS 106,107b,1.10x9,
1.10x13, 1.10x14 & 1.10x15. All with no luck. I got it to COMPILE...
so it was in .EXE formate.. but then i ran it and got
tons of invaled pointer errors, then it displays the JNOS intro junk
but does not display the net> prompt and then from their it locks up.
the only one i came close to compileing right is jnos1.10x9, that one
i got the net> prompt on *BUT* everytime i did something my coreleft
would keep going down till it crashed. I've worked my brains out on
this problem with no luck. if theirs anyone with any SAJESTIONS OR
if theirs anyone who has had luck compileing NOS with TURBO C (any
version) please let me know. or if theirs anyone who has experenced
the same problem, please also let me. ANY INFOMATION IS NEEDED!!!

Thank you much - 73

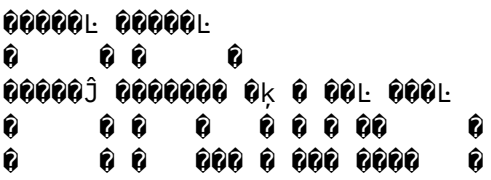
Dear Newsgroup,

I am a scientist at the University of Florida and also a ham operator.
I anticipate being in the Bahama Islands (Eleuthra) for several months
this summer on a research sabbatical.



I would really appreciate direct communication with another amateur
in the Bahamas, or any information on the policy, practice, and procedure
of taking and operating my radio equipment in this country.

Any info on packet any freq in the area would be doubly appreciated ..

Thanks in advance .. Sonny .. sonny@ufnet.ufl.edu

Amateur Radio Net is a net dedicated to Amateur Radio enthusiasts. If
you are an Amateur Radio enthusiast, or any of your callers are, this is
an echomail network for you. ARnet is replacing an older ham radio
network that recently folded - RF-Net(tm).

If you would like to get more information about this net, please look
for the information packet ARNET024.ZIP on the following BBS's:

Channel1
SaltAir
Mustang HQ BBS
Execnet
Intelec
Sound Of Music

and the Network Host BBS - The Silicon Garden.
It can be FREQ'd from 1:2619/211 using a magic name of ARNET

ARnet is available via QWK & FIDO. As this is the initial announcement
of the net many HUB positions are still open.

If you have any questions, please contact me.

Nice island...not sure how it has managed through the recent
Hurricanes, but several years ago we used to go to Governor's Harbor
and operate during the CQWW...nothing serious, just four guys, a light
aircraft, a ton of beer and some radios...

drop a line to lhurder@arrl.org and ask him to send you a reciprocal
operating packet for the Bahamas. I am not sure what the fee is these
days, but it used to be $6.00US/year...renewable.

Part of the reason I am foggy on this is we found a loophole to crawl
through and have a Bahamian callsign now... we keep it current and
whoever is there uses it.

Hope this helps...

Hi,

I was looking through the Linux pl15 source last night, and found references
in drivers/net/CONFIG (and various other places) to "ax25.h", CONFIG_AX25 and
various other things.

Where would I find this driver? I've looked in all the normal places one finds
Linux stuff and drew a blank.

Thanks,

Ian.

     Check out the KA9Q package up on atari.archive.

     I believe that it is a full port of the KA9Q package that I have seen
PCs use for packet radio links. I believe you still need the hardware
interface though ... :).

    I recently acquired an HP95LX palmtop PC, and I'm hoping to turn it, along
with my HT and a mini TNC, into an extremely portable packet station. Is any-
one else using this great little PC for packet? I'd be interested in hearing
from you, either here on via email. Any hints would be appreciated.

--
   Tim Russell   russell@spdcc.com
Most people would rather have comfort than freedom. The paradox is that you
can't really have the former, in the long term, unless you have the latter.

I have an AEA Packet Terminal Node Controller For Sale, model PK-232MBX,
in good condition, with all cables and manuals, as well as software.

Current price for these is around $350.00. Asking $250.00

e-mail, or phone 404-587-1613

I have a PCS 4000 2 meter mobile rig which I would like to use
for packet. Is anybody out there using this radio for this
purpose who can give me any hints or warnings?? Also, I could use
some guidance regarding the right pin connections to use to
connect the TNC to my rig. Any help would be greatly
appreciated.

Quick question. I am setting up TCP/IP packet radio using a MFJ-1270B
(TNC 2). The ROM's must be up to date, because the modem recognizes
the KISS ON command. What is the series of commands the the MFJ needs
to properly initialize it for TCP/IP packet radio? I have been successful
bringing up a PK232 and PK88, because these manuals have the commands listed.
The MFJ manual I have apparently predates the use of KISS mode.

Thanks in advance.

Hello. I am beginning to explore packet radio technology and after
following this newsgroup I still have a few questions. I am most
interested in connecting to internet and would like to know if
it's possible to be able to connect to machines such as with
telnet with nothing more than radio equipment. I have information
on 56kbit connections in an HF band without a license. This
doesn't seem accurate, but I'd like to know if such a thing
is possible and what type of equipment would be required. I'd
also be interested to know if packet or digital radio operation
can be performed somehow without FCC rules/regs. All I know for
sure so far is that unless your rich you can only expect to
connect to PR BBSs, chat and get weather info at 1200 baud
under FCC rules. I do better than that with a phone/modem.

     Your facts a skewered, no offense but you have been misslead wildly. First of all, 56kbit is not possible with HF, at least I am sure it isnt. Heck with VHF 2400 seems the max. YOu would need UHF at the least for any significant speed increase. As for operating without a liscence, yeah, right. Only in receive only mode could you do so, if you want to transmit, you MUST have a liscence to do so.

     As for telneting and so on, sure you can. There are TCP/IP protocolk programs for Packet radio available, such as KA9Q's NOS. There is also a network out there, an IP network for packet radio, any IP address starting with 44. is a packet radio station. I am starting to get involved in my local Amateur Radio club in my home town and we are operating a packet radio station with an IP. If you have more questions, ask.

utgpu!attcan!ncrcan!coutts!wwg
From: wwg@coutts.UUCP (Warren W. Gay VE3WWG)
Newsgroups: rec.radio.amateur.packet
Subject: TPK<==>FBB protocol/packets?
Message-ID: <61@coutts.UUCP>
Date: 15 Oct 93 17:48:45 GMT
Organization: Coutts Library Services
Lines: 60

I don't have a normal TNC (HAPN), so I'm attempting to write my own software to emulate some of the TPK processes, while connected (and not) to a FBB bbs. Grabbing the broadcasted bulletin headers is a sinch. Getting uploads/downloads due to compression, is NOT.

After TPK transmits the "F< 113905\r" message to the bbs (while connected to retrieve message # 113905) some data followed by the compressed message is transmitted. While the dumps of actual traffic I have at home show all the gory details... I'm trying to submit this message from memory... From memory, what appears to be transmitted is:

     01 <length_byte> subject info 00

This is followed by:

02 <data_segment_length> ...appears to be 4? fixed bytes of info...
+ the rest of the first data segment. A full segment appears to
never exceed the limit of 250 for length.

then more

02 <length_byte> ....data...

packets follow until the entire message is delivered to TPK. The length bytes never include the "02" byte nor the length byte itself.

NOW TO THE POINT OF THIS POSTING:
==========

1. Can anyone expound on the exact "data units" and formats here?

2. Where in the first "data segment" does the compressed message actually start? It appears bytes 0-1 (my recall?) are uncompressed size + 66 bytes (little endian). Bytes 2-3 (I think) were always "00 00" in my dumps. So does the compressed message start at byte offset 4, or is there a 66 byte frequency table/other header/or what?, prior to the compressed message? Most messages all start with nearly identical byte sequences for up to 15+ bytes. It almost suggests a frequency table...

3. WHAT COMPRESSION METHOD IS USED? Is it LZW (ie if no frequency table is used)? Maybe one of the PKZIP employed methods? Maybe the same one used internally by 7PLUS.EXE? Anybody know what method 7PLUS.EXE uses?

Anybody wanna suggest some good tests for identifying the compression method used?

If there is enuf interest, I could upload some of my captured TPK <==> FBB bbs traffic dumps. With enuf net readers jumping on the "problem", I'm sure we can crack this open.

Maybe, there actually exists some documentation on this topic?

Lines: 28

I have uploaded to the SimTel Software Repository (available by anonymous
ftp from the primary mirror site OAK.Oakland.Edu and its mirrors):

pub/msdos/packet/
ptm528-1.zip   Danish Packet Term. and Mailbx. Prg&Eng. Lang.
ptm528-2.zip   Scandinavian Language files for PTM 5.28
ptm528-3.zip   European Language files for PTM 5.28
ptm528-4.zip   Scandinavian Doc files for PTM 5.28
ptm528-5.zip   European Doc files for PTM 5.28
ptm528-6.zip   Accessories for PTM 5.28

Danish Packet Terminal and Mailbox. At the moment PTM is able to talk
Danish, Swedish, Norwegian, English, Italian, Spanish, French, German,
Dutch and Russian. It supports several TNC's: TNC2c, PK-88, PK-232,
KAM 2.85, KAM 5.02, TNC241.

The program can be used with no limitations, but the author encourages
users to register. See the documentation for details.

These files were originally distributed as self-extracting lharc files,
but were repacked to zip 2.x before upload to SimTel.

Hello

     A friend of mine will be staying in Flordia for a little while
starting at the end of December. He would like to conect to a packet
BBS down there in order to be able to communicated via packet with us
back here. He'll be staying in Boyton, FL, ten or so miles south of
West Palm Beach. I think he could reach as far south as Fort
Lauderdale, which I read has a node there. If anyone reading this is
in this area, please send me the information for contacting any such
PBBS that operate near there. UUCP/Internet or Packet address would
be fine. Thanks.

Greetings,

Our local ham club is looking to upgrade our digipeater control
programs. I recently learned that they are looking for a version
of either Netrom or TheNet programs called X1J. They (or I) are
not sure to which program this version applies. Apparently X1J
provides a "talk" option for simultaneous keyboarding with multiple
users.

I would greatly appreciate learning where this version could be
obtained. I can use NEWS, ftp, uuencoded email, or dos-based
floppies. I would be happy to supply a disk, and pay any postage
involved. If anyone knows where X1J can be obtained (or any other
digi ROM program that provides multiuser "talking," please let me
know.

Thanks in advance,

Dave Dorward, N7QOS

Does anybody know of another program that works with the hamcom rtty modem
other than the actual hamcom software. I was talking to someone on rtty
recently who mentioned that there was.

tnx es 73

Subject: S: manual for TNC commands
Organization: Rhein-Neckar-Informationssystem Viernheim
Date: Sat, 4 Dec 1993 14:21:41 GMT
Message-ID: <CHIL87.3CG@rnivh.rni.sub.org>
Lines: 41

Hi,

I have built a TNC-2 kit from a German vendor with a AX.25 L2V2. It
works great although the documentation was quite bad. The manual does
not include the right command description for my software version.
So I wondered whether someone in this newsgroup could send me a manual
for my TNCs' software.

This is the startup message:

Tucson Amateur Packet Radio TNC-2
AX.25 Level 2 Version 2.0 + BLP 1.0
Release 1.1.8 03/20/92 - 32K RAM
Checksum $F8
cmd:

and this is the output on '2wxn':

2WXN   (C) 1985-92 InfoMotion, Inc. All rights reserved.
Last mod:N2WX 03/20/92

BTW: What is this BLP 1.0 ?? The manual says something about PMS
(Personal Mail System) but this is not included in my software !
Is BLP something comparable to PMS ?

I hope someone could help me ...

Thanks for reading !

Bye,
  Torsten.

PS: I'm not licensed yet, so you cannot reach me via packet radio.

    In about a week I'll have my license test ...

  Hello Amateur Radio Operators,

I used to post this message here on USENET every couple months, but since
the BBS software I was using was causing me so much trouble I avoided trying
to have NEW users call while I tried to get things sorted out. Anyway I
have installed NEW BBS software on the system, and with only a couple small
issues left to work out, I decided to post this message announcing access
to the BBS. I really hope to make this one of the BEST AMATEUR RADIO BBS
systems in the world, so I am open to any comments or suggestions you might
have if you choose to login and take a look around.

At the moment you can not telnet into the BBS from the Internet, but
hopefully this will change in the not to distant future..

+--+
          The ALL NEW WB3FFV Amateur Radio Telephone BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the Amateur Community, but there is a lot more online as well. At this point in time I have hundereds of megabytes of files available for the BBS users, and through user support I hope to keep the latest and greatest ham software on-line for years to come. If you haven't tried this BBS system for a while then give it a call, as I have installed NEW BBS software that provides many new features that were never available before. The new software allows me to provide users with Internet E-Mail, plus full USENET access.

Below is the information that is needed in order to access the BBS via Telephone, please pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

Number: (410)-661-2475 -- 1200,2400,4800,7200,9600,12000,14400,19200,38400
(V.32/V.32bis/V.42/V.42bis/MNP1-5/HST)

Number: (410)-661-2598 -- 1200,2400,4800,7200,9600,12000,14400,19200,38400+
(V.32/V.32bis/V.42/V.42bis/MNP1-5/PEP/Turbo-PEP)

Number: (410)-661-2648 -- 1200 & 2400 (MNP1-5/V.42bis), 9600 & 19200 (PEP)

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: XBBS (UNIX/Xenix Multiuser BBS) Version 7.95u
Misc. Info: Machine is an 80486-66 running UNIX V/386 and features more
than 2.5 Gigabytes of on-line file storage.
Most transfer protocols are available!!
Sorry, FTP access is NOT currently available

I attempt to keep the latest and greatest HAM software on-line, and encourage all to upload anything new that they come up with, as it is of benefit to all. Here is a sample of a couple pieces of software that is available for DOWNLOAD:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, WG7J, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
G8BPQ PC-Node
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners

Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of avalible archives are stored in a file called 'FILES', and it is located in the /usr/spool/uucppublic. To retrieve the files listing just use the following command:

```
uucp wb3ffv!~/FILES /usr/spool/uucppublic      (ASCII Text)
                -or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic        (16-Bit Compressed)
                -or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic       (GNU Gzipped)
```

This will move a copy of my files listing into your uucppublic directory. If you have any questions or problems, feel free to contact me at one of the numbers/adresses below. Good Luck...

After my post for info on Spread Spectrum this
is a summery of the info I got. So anyone else who wants to
play with SS can.
I had many request for the info I might get, so I think it would be
nice to put it here.

Thanks to all who sent me info.

A group meet in Redwood City on the second Wednesday of the month.

Tell him "Steve" sent you ;-)

Steve KA6S

I'm also interested in spread spectrum applications, primarily for data
communications. One place to look for information is the ARRL Spread Spectrum
Sourcebook. It has construction projects as well as a lot of information
on the technology and capability of SS systems. It also covers the legal
aspects of SS operation.

I'm thinking of coming up with an SS data transmission scheme that would
use the entire bandwidth of an OSCAR transponder -- at a power level just
above the noise floor -- for a 56kb data link.

If either of you gets more information, add me to your list of interested
parties.

Thanks,
-- Bruce Toback
KN6MN

See Electronics World + Wireless World "Voice link over spread
spectrum radio" by James Vincent G1PVZ. This series began in Sep 93
issue describing a complete Direct Sequence system from microphone to
the antenna (435 MHz) and from the antenna to the loudspeaker.

The classical reference is "Spread Spectrum Systems" by Robert C Dixon,
ISBN 0-471-88309-3 (2nd edition 1984). This book is quite readable
compared to many other scientific books.

Paul OH3LWR

In a previous post, Marc Lombart (ranfry@CAM.ORG) wrote:
:   My knowledge of Spread Spectrum is quite limited, but my
: understanding is that it would probably not be viable as a HAM node,
: seeing as it takes many times the normal bandwidth for each "channel."
: The main use of Spread Spectrum is security, not communication. At
: least, that is what I know from the little I have found on the subject.

Security depends on the algorithm you use to "spread" the signal, so
you can make it pretty public if you want to. (I think current FCC

rules limit ham useage to a few well-known algorithms.)

As far as my limited understanding goes, the main advantage is coordination: a set of well-coordinated and efficiently-used conventional channels are more efficient of spectrum space than spread spectrum, but you can throw a bunch of spread-spectrum users into a band with *no* coordination and do almost as well. It really pays off when users start moving around or coming and going with no warning. That makes it ideal for consumer applications, the advantages for hams are less clear.

The ARRL publishes a book on the subject that is supposed to be a pretty good intro.

You might try sending calling TAPR (don't have their address handy). I think they were experimenting with some 900MHz spread spectrum packet stuff in Southern California... some sort of wide area high speed net, I believe.

Ken Friberg
friberg@mtu.edu
n8pbe@w8yy.#upmi.mi.na

Hi, there are a number of ways to genarate PN codes. One way is to just write a program that generates random numbers each between 0 and 1 (or -1 and 1) However this does not satisfy some of the conditions that the PN seqs must meet in a (rather) realistic environment.

So another way is to use m-sequences, which have well-defined correlation properties. But the problem here is that you can only genarate that many different seqs for a specific number of shift registers. In other words the more m-seqs you want the more (hardware or) software you have to write to generate them.
Finally another way, is to use Gold sequences, which basically is a combination of m-seqs. With this method you can generate even more PN seqs with only a few additional lines of code. All of the above has been implemented before, and I amsure you'll find a lot of material.

If you need more information, about books, papers (on Spread Spectrum) and even the code let me know.

regards

-stavros

>To answer Keith's question, get a copy of the ARRL _Spead Spectrum
>Sourcebook_ for the basic outlines of the various types of SS, what
>PN codes are permitted, and the types of equipment modifications needed
>to operate SS. You can convert an IC4AT to a 70 cm hopper, and there
>are plans for building PN spreaders using common off the shelf parts.
>Outfits like Qualcomm have chipsets for complete systems, but if you're
>learning and experimenting, it's probably better to build your first
>units with simple TTL blocks so you'll understand what's happening.

There are other references kicking around, and for a completely
up-to-date one, see if you can track down the September and October
1993 issues of _Electronics & Wireless World_. The September issue has
a very good overview of spread spectrum (concentrating on direct sequence),
and the October issue has construction information on a 435 MHz direct
sequence spread spectrum system. The articles were written by James
Vincent, G1PVZ.

In typical spread spectrum fashion the transmitter is (relatively) simple,
while the receiver is quite complicated. It uses some very interesting
techniques for acquiring and keeping correlation, and does not
need an external reference like some of the stuff in the ARRL spread
spectrum book...

Just in case, no, I have no connection with E&WW, or with Reed Business
Publishing. I have no idea who Mr. Vincent is, though I do like his
style.

73 from Burnaby
laura VE7LDH

I recall seeing "the Spread Spectrum Sourcebook" as part of an ARRL literature
ad in a recent QST. I am aware of at least one newsletter devoted to this, and
I seem to recall that there is a recent commercially-available amateur product
that
is a Spread Spectrum modem/radio. Sounded neat - think the creator was in AZ,
but could be wrong.

Me? I haven't seen/done spread spectrum since I was a satellite jock in the USAF
back in the seventies...

Neat stuff, though.

>Is it just bradford or is this site empty every where ?

Because it's been superseded: the new group is rec.radio.amateur.digital.misc.
If you don't have that one, ask your local news administrator to get it.

(Also answered in email.)
